Upon the whole, this volume will be found very interesting for the student's shelf, and useful as a book of reference, both to the artist and amateur. We consider the observations on the effect of climate to be very judicious; and indeed all the strictures are sound and sensible, though in a few instances perhaps theoretical principles are carried too far. For example, when Teniers is cited in support of the general rule, that a momentary stagnation of action is the fittest point for pictorial representation, we cannot help remembering a multitude of his works in which dancing, romping, and the liveliest action is exhibited. The same applies to all battle-pieces—to such subjects as the race of Atalanta—and many others, as well classical as simply natural. Another instance of exaggerating his opinion, and pushing his argument too far, is, we think, given by the author in his Philippe against antiquity and learning, as trammels on modern genius. It is true that invention has not so wide a field to range in, but at the same time knowledge is presented to us in a perfect form, instead of our having the toil and trouble of digging for it. Mr. James assigns far too little consequence to this great advantage, without which all genius, except supernatural, would be as nothing—

So vast is art, so narrow human wit.

We had intended to submit some remarks upon this work in reference to the state of the arts in England at this period; but a strange article in the last Edinburgh Review will furnish an apter ground-work, and enables us, by closing this review, to divide the subject into two notices of reasonable length.

OR AFTER DINNER CHIT-CHAT.

By a Cockney Gray Beard.

#### CHAPTER VII.

*A Morning Walk along the Strand.—Fountain Gardens.*

It was the twenty-ninth of May, when, according to a favourite custom, I took an early walk from my old lodgings in Spring Gardens, to Charing Cross, to see the statue of Charles I. decorated as usual with oak boughs, to commemorate the Restoration. This memento of respect for the unfortunate House of Stuart, has always made a grateful impression on my mind.

I can remember the time, when the surrounding neighbours took a deep interest in the decking of the "Black man upon the black-horse," and it was the first sign they looked for in opening the windows of their

dormitories in this sweet season of the spring. But now, all interest in these customs and observances appears to have died away, and I stood alone, as it seemed to myself, the last remaining leaf of the last branch of that Old Royal Oak Society, which made the latter end of May a social epoch in the smiling year.

Yet were no times more loyal than when we met at the Turk's Head to celebrate the Restoration, and to chat about the days of the "merry monarch," Charles. There was a sentiment in these meetings, to perpetuate the memory of the past epa, which largely tended to the public good. And I am of opinion, with David Garrick, who used to say, "he that had no taste for a Christmas carol nor a Michaelmas goose, is not a man to my taste." Garrick had a great regard for the observance of old English customs.

I looked around me, and what a change! I had recently seen Scott's picture of Charing Cross\*. The long roof of my worthy old colleague Pollock, so long the saddle of our late venerable sovereign, alone remained with the statue, and grey-headed Ephraim, in statu quo.

The surrounding shops † were in Scott's time nearly all open, the woolsen-drapers with their cloths exposed in coloured piles, and the imitative clothes carved in wood, red, yellow, blue, and all the rainbow tints, and the splendid sign of the golden sun, hanging on its curiously wrought iron bearings far into the street; and next to this, a long string of narrow casks, various in colour as a tailor's pattern book, that told an oil and colourman lived there.

The heavy leathern conveniences too, the hackney-coach, and lesser vehicle, the sedan, made the picture interesting to the sight.

Here I could not forego the melancholy satisfaction of ruminating on the past. Alas! poor Charles. On this spot, what turbulent scenes had been performed; a part of the tragedy of thy reign! Here did the infuriated republicans pull down the last gothic cross, unwittingly to make the space for thy illustrious effigy. Yet, "how frail are the imaginations of the evil-doers!" Those, who from this ancient site, viewed thy scaffold before White-Hall, saw the hurdles pass that bore the regicide to his more ignominious doom.

In 1649, the head of the sovereign was held, reeking in its warm blood, by the hand of a masked executioner. In 1660, only eleven years after, retribution stepped

\* This view of Charing-Cross is in water colours; and such its fidelity, that every spot is known by its wares or its sign. A series of engravings, from the many pictures and drawings scattered in different collections, would form an interesting illustration for a History of London. In a future number, I shall give a list of several that I have seen.

† In visiting the shop of Mr. Pollock recently, I looked in vain for an old acquaintance, the tiger, so admirably stuffed to resemble life; and which had terrified many a little squalling brat who is now grown as great a sage as Ephraim.

the heels of the traitors. At the trial of Charles, out of one hundred and thirty judges, only seventy-four sat. Sixty-four were present at the session, and fifty-nine fixed their guilty hands, and seals to his oath warrant. Of these, twenty-four had already been summoned to that dread audit, where no secrets are hidden." Twenty-seven were taken, tried, and condemned; some experienced that clemency of the royal son, they had denied the kingly father. Five of these judges, and five principal vectors of the murder of their sovereign, suffered the penalty of their crimes; whilst sixteen, who sat in judgment on their lord and king fled and finally escaped.

Looking eastward, as I advanced, having it out to pass a long day with that intelligent collector, my excellent friend, Mr. Aker of St. Paul's, I looked to my right, upon Northumberland-House. There I was reminded of one object that has been spared; and onward, the general feature is nearly as

appeared half a century ago. Although receding step by step, even this part bears testimony of the increasing wealth of the top-keepers from that time. Some jutting pper apartments scattered here and there, creep up the picturesque conp-d'ail.

The morning was fine, and I walked down to the river-side, till I stopped at the site of such delight in my early days—to look at the magnificent bridge, named in compliment to the immortal hero of Waterloo. The porter admitted me, and I once more stood on the old "Villier's Walk." § I sat down on the bench, beneath Inigo Jones's later-gate, and looked up at the apartments where I saw poor Hogarth for the last time. Was then about sixteen.

Villier's-Walk was then the summer evening promenade for the good wives and fair daughters of the neighbourhood. On Sundays it was crowded; and imagination brings to my ears the rustling of the silken gowns of Mrs. Lintot § and Mrs. Cadell, when they arrived to the wife of Mr. Goldfrey; ¶ and well I recollect, Garrick mimicking the formal

§ A thousand wagers have been won and st in my younger days at the Turk's-head, upon the question, which way the lion on Northumberland-house turned his tail; and I am ashamed to say, to this hour, I could not venture to declare which way the lion looks, so often have I been bewildered with the subject hen absent from home. Yes, I have sometimes thought the lion is secretly turned about, one obstinate wagger on the looking side, have duly maintained this opinion!

¶ This promenade is now little frequented, although it is pleasant and cool on a summer evening. There are four entrances to it with open gates, all locked; but a porter attends, who is a lodge that commands a view of the bames. For many years, the place of porter was filled by the identical *Strap*, the humble tend of Smollet.

§ Mrs. Lintot, an ancient maiden lady, a relative of Bernard Lintot, Pope's publisher.

¶ The wife of Mr. Godfrey, chemist, the gu of the Phoenix, Southampton-street; in whose family the concern had been carried on more than a century. The first Mr. Godfrey being a disciple of the great Boyle.

how of Dr. . . . (who had that day preached a charity sermon at St. Martin's in the Fields,) to Mr. and Mrs. Drummmond, the silversmith and lanker of Craig's Court, on their complimenting the learned gentleman on his eloquence and success. Garrick made the party laugh, moreover, by a gratuitous specimen of the old doctor's style of oratory; who could hardly give it utterance for very fat. Old Mrs. Cartony, ¶ received a slight bow from the doctor, for her encomiums on his "fine discourse." Garrick asked from the window, of Mr. Squires, "who that comely clergyman might be?" Squires informed him, but I have forgotten his name.

My uncle Zachary had a friend, a virtuoso, who had a suite of apartments at the bottom house the east corner of Buckingham Street, York Buildings; the parlour looked immediately on Villier's Walk, and consequently commanded a fine view of the Thames from Westminster to St. Paul's. The house had been occupied by Peter Czar, ¶ whilst he remained in the British metropolis. Thither I frequently went on a Sunday evening with my indulgent great uncle; and there I have seen almost all the wits of the time.

The events of that memorable evening, when I last saw the "moral painter of mankind," I remember, even to the minute circumstance of what we had for supper. Cold lamb, and some delicious early cucumbers from a garden at Vauxhall, brought by Mr. Tiers, after the cloth was laid; whilst Dr. Zachary § Gray, was at the host's request, being like most distinguished sons of the church, on *fait* at such operations, dressed the salad.

The windows were open, for the evening was sultry though in the beginning of June. The moon was at the full, and with dazzling brightness silvered the edges of the rippling stream athwart from shore to shore. The clouds were magnificently grand, for the sun had set in glorious majesty after the storm. We were all admiring the beautiful effect from the windows, when a boat tacking across, (a dark object o'er the illuminated waves,) flitted by; and the stentorian voice of the mad cap Hayman, shouted, What cheer Ho! The iron gate beneath the rustic arch was unlocked; and behold, the worthy crew were Jonathan Tiers, Hayman, Wale ¶, Monsieur Roquet ¶, Rouilliac, and Beau Ashley. ¶

\* Mrs. Cartony, the wife of the tea-dealer, where most capital grocery was to be had.

† Mr. Squires, an apothecary in the Strand.

‡ A curious fellow, a sort of mountebank philosopher, in those days of oddity, waited upon Peter Czar at this house, and made him an artificial gem for a ring, with a *broom-stick* and a *flint*, which was set in gold, and worn by the illustrious stranger.

§ Dr. Zachary Gray, author of the celebrated edition of Hudibras, with the Doctor's learned and interesting Notes; for which Hogarth designed a series of plates.

¶ Wale and Hayman for many years supplied the graphic illustrations for all the picture books.

¶ Monsieur Roquet, an enamel painter, wrote a curious book on the state of the arts in Eng-

land; it had thundered all Saturday night, and until four o'clock on the Sunday afternoon, so that Tiers had been constrained to dine mump-chance with Mr. Dawson, ¶ at Vauxhall; the bad weather had kept him from his usual journey to his country house. Hence these his protégés and friends had walked over from town, on a speculative visit, hoping to find him at home. The genius of sociality favored their expedition, and they all got into a sailing boat at Vauxhall, and made a pleasant passage down to Buckingham Stairs. Hayman was a capital sailor. Now the party secured all but complete, when in walked Sterne and Caleb Whiteford † on his arm, the youngest of the group except myself; and certainly, the quietest of them all. O! what a coterie of talent, originality, and naïveté. Had it not been Sunday night, I might even now, in this more sober age, have boasted of their having sat it out until the eastern sky promised a beauteous morn—Garrick excepted, who left at twelve, for his house in Southampton Street; saying with his usual gaiety, "Egad, I shall have to tame a shrew to night."

He had entertained us with a circumstantial detail of his conversation with his Majesty in the green-room. The young King and Queen had been at the theatre the preceding week. Roscius, as usual, was a little too egotistical, and Sterne rallied him most playfully. Dr. Gray set the hint a going, and the group accosted him the whole night, and for a long time subsequently, as "Sir David," in anticipation of something that had escaped him about knighthood.

Among other sprightly subjects which I recollect my uncle Zachary to have mentioned many years after—for being amused at that early age to such late hours, I had fallen asleep, was some cross-readings which Caleb Whiteford had made from the newspapers. He was the inventor of that species of whimsical, but witty absurdity; Garrick obtained for his allotment some well merited compliments, by way of compensation for a few pointed *skits* at his vanity. One I particularly remember, for I was awakened by the loud laughter it excited, gave a home thrust at Mr. Jonathan Tiers, and his "bonnie companions every one," for

land; also a descriptive account of Hogarth's prints, in French, for the use of Marshal Belialie, who was a prisoner in England. This also accompanied Hogarth's works abroad, particularly in France, where they were much sought by the cognoscenti.

¶ Beau Ashley was a painter of portraits, a fellow disciple with Sir Joshua Reynolds, under Hudson. He was a bon vivant, and had the good fortune to marry Lady Daniel, whom he survived, and came into an estate by her demise of 5000*l.* per annum. He lived in Pall Mall, in the house built by the Duke of Schomberg.

¶ Mr. Dawson, who established the plate glass manufactory there; and father of Mr. Dawson the banker, of eccentric memory, who had every spoke of his carriage wheels painted a different colour.

† Caleb Whiteford, the factitious Vice-President of the Society of Arts in the Adelpchi, the friend of Dr. Franklin, and a principal promoter of the peace between England and America.

their Bacchanalian revels on the Lord's day. Hayman\* had a taste of his satiric scourge, for his long shanked figures, and his mad frolics. Doctor Zachary Gray read the apocryphal rhodomontade with consummate humour, and poor Laurence Sterne laughed himself into an authentic fit of coughing that almost stopped his breath. These cross-readings, however, were wrapped up in such good humour, that he must have been morose indeed who could have felt offence at honest Catech.

Mr. Jonathan Tiers, to whose spirited exertions are owing the delightful and innocent summer amusements at *Spring Gardens*, the splendid imitation of a night scene in the musings of romance, richly deserved the tide of success that flowed to Vauxhall. He was the friend and patron of the ingenious men of his time. Like King Charles the Second, he mixed the fine gentleman with the bon vivant, possessed a warm and generous heart, and was consequently most liberal to those whose talents contributed to his plans. He was esteemed by the composers who wrote for his orchestra, and did abundant kind offices for his vocal and instrumental performers. The ladies, whose sweet notes silenced the nightingales of his illuminated groves, experienced in him an intrepid protector from the freedoms of the gay bloods and bucks of those less polished times, until every one struck with his gallant manners, emulated his address, and these public favorites were treated with becoming attention and respect.

Vauxhall is noticed as early as June 1732, at which time a *Ridotto al fresco* was the entertainment. About four hundred persons assembled, in the proportion of ten males to one female; hence we may suppose that the general opinion was not in favour of the morality of the meeting. Most of the subscribers appeared in dominoes and masks. They retired by four o'clock in the morning. Such, however, was the licentious spirit of the times—and then even gentlemen's servants wore swords—that a hundred soldiers were necessarily stationed at the entrance, to preserve order.

\* Francis Hayman. The four pictures from Shakespeare, which he painted for the Pavilion of the Prince (the father of our late venerable sovereign) at Vauxhall, were so much esteemed by his patron, Mr. Tiers, that he had them copied, and removed the originals to his own residence. Hayman was President of the Incorporated Society of Painters, and subsequently an R. A. and librarian of the Royal Academy.

† "Tide of success." It was the custom even for genteel parties to go by water to Vauxhall, which opened earlier 60 years ago. Mr. Tiers had two of the boudoirs of the Waterman's Company to attend at Vauxhall Stairs from five to eleven o'clock, to prevent imposition and abuse. In 1738 silver tickets were sold at twenty-four shillings each, to admit two for the season. A single admittance was one shilling. Mr. Tiers presented his esteemed friend Hogarth with a golden ticket of admission, in perpetuity. I have been informed that the venerable Mr. Shield, who has composed "so much and so well" for these gardens, is now the possessor of the singular privilege.

Yet Vauxhall, in spite of the managers, was for many years the occasional scene of sad disorders. Ladies were forced from their parties by drunken bucks into the dark walks, and treated with savage rudeness, which terrified respectable females from remaining in the gardens after midnight.

About the time of the above mentioned meeting, the proprietor of Vauxhall pledged himself to the public, that the dark walks should be lighted; no bad women, known to be such, should be admitted; and watchmen were hired to keep the peace.

Tiers had a country house near Leatherhead, and it was his delight to pass his Sunday, and part of Monday there, during the Vauxhall season, with artists and wits, many of whom he almost supported by his bounty.

The gardens were closed at twelve on Saturday nights, when some of those whom he selected, got into his carriage, and others into a hired coach, and after that late hour set off for his pleasant retreat. There they remained until Monday, when, taking an early dinner, they returned to London in time for the opening of Spring Gardens. Many interesting anecdotes of these parties I remember long ago to have heard from Frank Hayman, whose facetious spirit enlivened every club and society (and they were many) to which he belonged, in that age of tavern meetings.

Hogarth's talent was called in to aid the decoration of Vauxhall, by Mr. Tiers, and so was that of Hayman, then, (such was the deplorable state of painting in England,) considered the best painter of history. Others, ingenious in the inferior departments of art, were liberally rewarded for their assistance in this public place. Roubilliac also found a patron in Mr. Tiers; and the exquisite statue of the great Handel, from his chisel, in Parian marble, remains a record of the virtue and talent of the excellent triumvirate.

He did not confine his patronage, however, to these. The house at Stockwell, built by this munificent gentleman, and now occupied by his respected relative, Mrs. Barrett, displays in an apartment, grand and spacious for the time it was built, a collection of the works of all the best painters of the day. Hogarth, Wilson, Reynolds, (Gainsborough, Barrett, Zoffany, and others, even, amply to repay the connoisseur for a ride to Stockwell.

The last time I went to these beautiful gardens, and contemplated the statue of the modern Orpheus with his lyre, I could not but indulge in a reverie of what he would have felt, on hearing his Messiah performed by the glorious band in Westminster Abbey, or what the liberal Jonathan Tiers would have experienced, on beholding his Elysium splendidly illuminated with nearly forty thousand lamps!

It is worthy of remark, that in an account of Vauxhall, to which was prefixed a view of the orchestra, by that general illustrator, William Wale, it is proudly stated, "When it grows dark, the garden is illuminated almost in an instant, with about 1500 glass

lamps, which glitter among the trees, and render it exceeding light and brilliant.

## ARTS AND SCIENCES.

### GALVANISM AND MAGNETISM.

*Experiments on the influence of the Voltaic Pile upon the magnetic needle, by Mr. J. Chr. Ørsted, Professor of Natural Philosophy in the university of Copenhagen.*

[Translated from the *Bibliothèque Universelle* for August.]

The first experiments on the subject which I now undertake to illustrate, were made in the lectures which I delivered last winter on electricity and magnetism. They showed, in general, that the magnetic needle changed its direction from the influence of the Voltaic apparatus, and that this effect took place when the circuit was formed, and not when it was interrupted, a method which celebrated philosophers had tried in vain several years ago. But as my experiments had been made with an apparatus of small power, the effect of which was not so striking as the importance of the fact to be established seemed to me to require, I requested my friend M. Esmarch, counsellor of justice to his majesty, to join me in repeating them with a more considerable apparatus. We had also associates and witnesses in the Chevalier Vöngel and Messrs. Hanch, Reinhardt (professor of natural history), Jacobsen (professor of physic, and a very able chemist), and Zeise, professor of philosophy. I also made some experiments alone, and when they afforded me any new information I took care to repeat them in the presence of these eminent men of science.

In the following details I shall omit every thing that led me to the discovery, and confine myself to the facts which confirm it.

Our Voltaic apparatus was composed of twenty rectangular copper receptacles, contiguous to each other, the length and the height of which were about twelve inches, and the breadth about two inches and a half. Each receptacle is formed of two plates of copper inclined in such a manner that they can bear the copper rod which supports the plate of zinc in the water of the adjoining receptacle. The water with which the receptacles are filled contains 1/20th of its weight of sulphuric acid, and another sixth of nitric acid. The portion of each plate of zinc immersed in this liquid is a square, the side of which is about ten inches. Less powerful apparatus may be employed; it is sufficient if it be able to heat a metal wire red hot.

The opposite poles of the Voltaic apparatus are made to communicate by a metal

\* We received this paper, written in Latin, and hasten to publish it, requesting, what we are sure we shall receive, the earnest attention of our chemical and philosophical readers to so curious and important a narrative.

\* The following is the original, which is not clear, "Quodvis receptaculum duabus laminis cupreis instructum est, its inclinatio, ut baculus cupreum qui laminam zincum, in aqua receptaculi proxime sustinetur portare possit."

wire, which we shall call, for brevity's sake, the *conducting* wire, and we shall designate the effect which manifests itself in and about this conductor during the Voltaic action, by the epithet of *electric conflict*.

Suppose now that the rectilinear part of this wire be horizontal, and placed above and parallel to the needle of a compass, freely suspended. The apparatus must besides be constituted in such a manner, that the conducting wire may be bent at pleasure, to give to its active part the position which the experiment requires.

In that which we have just supposed the magnetic needle will move, so that under that part of the conducting wire which is the nearest to the negative pole of the apparatus, it will decline towards the west.

If the wire is not more than three quarters of an inch from the needle, the declination of the latter makes an angle of about forty-five degrees. If this distance is augmented the angle decreases in proportion. The absolute quantity of this deviation varies accordingly as the apparatus is more or less powerful.

You may change the direction of the conducting wire towards the east or towards the west, provided it remains parallel to the needle, without any change in the result, except with respect to its extent; whence it follows that the effect cannot be attributed to attraction; for the same pole of the needle which approaches to the conducting wire when it is on the east side, ought to recede from it when it is placed on the west side, if these declinations depended upon attractions or repulsions. The conductor may be composed of several wires or fillets united in a *faisceau*. The kind of metal employed does not change the effect, but it may perhaps have some influence on its extent. We have employed, with equal success, wire of platinum, gold, silver, brass, and iron, fillets of lead, of pewter, and of mercury. When the circuit is interrupted by water, the conductor does not lose its whole effect, unless the interruption takes place for a space of several inches.

The effect of the conducting wire on the magnetic needle takes place through glass, metals, wood, water, resin, vessels of baked earth, and stony substances. All these substances interposed between the conductor and the needle, do not appear sensibly to diminish the influence of the one on the other. It is the same if you interpose between them the disc of an electrophorus, a band of porphyry, a saucer full of water. It is not necessary to remark, that the passage of electricity, whether common or Voltaic, through those divers substances, had not been yet observed. Thus the effects which manifest themselves in the electric conflict, are very different from those which the action of either pole, considered separately, can produce.

If the conducting wire is disposed horizontally below the needle, the effects are of the same nature as those which take place when it is above it; but they are produced in an inverse direction, that is to say, the pole of the needle below which is that part of the

conducting wire which receives the negative electricity of the apparatus, declines then towards the east.

In order more easily to call to mind these results, it may be reduced to this formula; viz. that "the pole above which the negative electricity enters declines to the west; and to the east if it enters below it."

If the conducting wire (always supposed horizontal) is gradually turned so as to form a larger or smaller angle with the magnetic meridian, the declination of the magnetic needle augments if the motion of the wire tends towards the place of the needle; it diminishes, on the contrary, if it recedes from it.

When the conducting wire (being horizontal) is rendered parallel to the needle (balanced by a little running or counter weight), it does not make it decline either to the east or to the west, but it inclines it in a vertical plane, so that the pole next to which the negative action of the pile affects the wire, is depressed when the wire is situated on the west side, and elevated when it is situated on the east side.

If the conducting wire is placed either above or below the needle, in a plane perpendicular to the magnetic meridian, the needle remains at rest, unless the wire be very near to the pole of the needle, for then the pole rises when the entrance (of the electricity) takes place by the western part of the wire, and sinks when it takes place by the eastern side.

When you place the conducting wire perpendicularly opposite to the pole of the needle, and the upper extremity of the wire receives the electricity from the negative side of the apparatus, the pole of the needle moves towards the east; but if the wire is placed opposite a point between the pole and the middle of the needle, it moves towards the west. The phenomena appear in an inverse order when the upper extremity of the conducting wire receives the electricity of the positive side of the apparatus.

If you bend the conducting wire, so as to render the two parts parallel, after bending them it repels or attracts the two magnetic poles, according to circumstances. If the wire be placed relatively to either of the poles of the needle, so that the vertical plane which separates the two parallel sides of the wire be perpendicular to the magnetic meridian, and if then the eastern branch of the wire be joined to the negative extremity of the apparatus, and the western branch to the positive extremity, then the nearest pole of the needle will be seen to be repelled towards the east, or towards the west, according to the situation of the plane of the branches. When the eastern branch

|| This is not very clear: the Latin runs thus: "Filius conjungens in plano horizontali in quo movetur axis magnetica, opae saccinatis equilibrata situm, et acui parallelum, eandem nec orientem, nec occidentem versus deterbat, sed tantummodo in plano inclinationis autare fecit; ita ut poles, penes quem ingreditur vis negativa electrica deprimitur, quando ad latum occidentale, et elevatur quando ad orientale, situm est."

of the wire is made to communicate with the positive side of the apparatus, and its western branch with the negative side, the nearest pole is attracted. When the plane of the branches of the wire is perpendicular to the needle in a point equidistant from the centre and from the pole, the same effects follow, but in inverse directions.

A needle of brass, suspended in the same manner as one of steel, is not put in motion by the influence of the conducting wire. It is the same with a needle made of glass, or of gum lac.

Let us now take a cursory view of the ensemble of these phenomena.

The electric conflict acts only on the magnetic particles of matter. All non-magnetic bodies are permeable to the electric conflict; but magnetic bodies, or more properly speaking, the magnetic particles of these bodies, resist the passage of this conflict, so that they may be set in motion by the action of those forces, which combat each other.

It appears from the facts related, that the electric conflict is not confined within the conducting wire, but that it has a sphere of activity of some extent round it.

We may also conclude, from these observations, that this conflict acts in a rotatory manner; for without this supposition, we could not comprehend how the same portion of the conducting wire, which, when placed below the magnetic pole, carries the needle towards the east, should propel it towards the west when it is above this pole. But such is the nature of the circular action, that the motions which it produces take place in directions precisely contrary at the two extremities of the same diameter. It appears also that the circular motion, combined with the progressive motion, in the direction of the length of the conducting wire, must form a species of action which exerts itself about this wire as an axis. This remark, however, does not at all contribute to explain the phenomena observed.

All the effects, which have just been related with respect to the north pole of the needle, will be easily explained by supposing, that the negatively electric force on matter traverses a spiral, bending from left to right, that it propels the north pole, and that it does not act on the south pole. In the same manner we shall explain the effects on this latter, by giving to this force, or to this negatively electric matter, a motion in a contrary direction, and the faculty of acting on the south pole and not upon the north pole. The agreement of this law with the facts observed will be better comprehended by repeating the experiments, than by endeavouring to develop the explanation more at length. It would have been rendered clearer if the aid of figures could have been used, to point out the directions of the electric forces about the conducting wire.

I shall add only one remark: in a work published several years ago, I demonstrated that caloric and light composed the electric conflict. We may legitimately conclude from the observations which I have just re-

lated, that those effects take place by revolving motions. I am persuaded that these facts may contribute to clear up those which relate to what is called the polarity of light.

J. CHRISTIAN ØRSTED,  
Knight of the Order of Danebrog, Professor of Natural Philosophy at the University of Copenhagen, Secretary to the Royal Society of Sciences.

Copenhagen, 21st July, 1820.

(We shall give in our next number the highly interesting experiments of Professor Pictet of Geneva, on this subject.)

#### NEW DISCOVERED ISLAND IN THE PACIFIC OCEAN.

Stockholm, September.—The journal called *Almanna*, contains a letter from Major J. A. Graaner, to his friend and patron, General Baron Björnstjerna, dated July 2d, 1819, from the Island of Bourou, one of the Moluccas. He was upon a voyage from Valparaiso to Bengal, on board a vessel, with a rich cargo of the productions of Chili, viz. 3000 cwt. of copper, and gold and silver bullion to the amount of 350,000 piastres, for the purpose of exchanging them for the rich produce of India. The Major's object both in his many years' residence in South America, and in this voyage, was to promote the Swedish commerce; a plan of which he seems to have entertained the most sanguine hopes. The free importation of Swedish iron being allowed, he says, "in Chili, it will thus find its way to Peru, and all over the continent of South America; and an easy and most profitable commerce may be established between South America and Bengal direct. It was with full confidence of success in this first attempt that he was on his way to India; but unfortunately he did not live to reach his destination. He discovered in the South Sea a numerous group of islands, the largest of which he called Ocar's Island, in honor of the present Crown Prince of Sweden. He gives some account both of the islands which he visited, and the manners of their inhabitants. He paints the system of government of Buenos Ayres and Chili, during Puyredon's administration, as in all respects interested, intriguing, revengeful, and cowardly.

#### METEORIC STONE.

St. Petersburg, 15th September.

A meteoric stone, weighing 40 lbs. fell from the air during a violent thunder storm, at six o'clock in the evening, on the 12th of July, in the village of Listen, in the circle of Dunaburg, and the government of Witbesk. It penetrated a foot and a half in the ground, whence it was dug up by the peasants, and has been chemically analyzed by Dr. Eichler. The Imperial Academy of Sciences commissioned one of its members to examine it, who found the specific gravity of the stone to be 3.718. In the air it weighed 6 oz. 5 dr. 50 gr. and lost in water, of

\* There appears to be some omission here; probably a piece of stone of the weight here specified may have been knocked off, and sent to St. Petersburg for examination.—Ed.

the temperature of 13° 4' Reaumur, 1 oz. 6 dr. 18 gr. in weight; consequently the cubic content of this aerolite was 3.4 English cubic inches, if a cubic inch of water is taken at 253 gr. Notwithstanding the small size, and the few pores that could be perceived, its weight in the water, after it had been dried, had increased 68 gr. A magnetic needle was pretty quickly attracted, as well in an horizontal as in a vertical direction, by all points of its surface, but it did not at all attract iron filings.

Mr. Ackerman's Monthly Repository speaks in the following terms of an ingenious fire-alarm, invented by a Mr. J. G. Colbert.

"This instrument is portable, of the size and general appearance of a timepiece, except that the dial-plate exhibits a semicircle marked with the degrees from 1 to 180. When the index is placed at half or a whole degree, or more, above the heat of the atmosphere at the time, any increase of temperature beyond the degree indicated, sets the alarm in motion, and thus gives notice of the approaching danger. Hence it is obvious, that the principle of the thermometer has been applied to this instrument, which may be placed in any situation, and is sold at prices varying from five to thirty guineas, according to the plainness or elegance of the execution. All those who wish to obtain an additional security against the dangers of fire by night, may have an opportunity of inspecting this contrivance at Mr. Ackerman's."

#### LITERATURE & LEARNED SOCIETIES.

OXFORD, Oct. 14.

On the 7th, the Rev. Frodsham Hodson, D. D. Principal of Brasenose college, resigned the Vice Chancellorship, and the Rev. George Wm. Hall, D. D. Master of Pembroke college, was invested with that office with the usual formalities, and nominated his Pro-Vice-Chancellors, viz.:

The Rev. Thomas Lee, D. D. President of Trinity college; the Rev. Frodsham Hodson, D. D. Principal of Brasenose college; the Rev. Richard Jenkens, D. D. Master of Balliol coll.; the Rev. John Collier Jones, D. D. Rector of Exeter coll.

Congregations will be held on the purpose of granting Graces and conferring Degrees, on the following days in the ensuing Term, viz.—Tuesday, October 10; Thursday, October 26; Thursday, November 16, and Friday, 24; Tuesday, December 5, Tuesday 12, and Monday, 18.

Tuesday, October 10th, the first day of Michaelmas Term, the following Degrees were conferred:—

MASTERS OF ARTS.—Rev. J. Ireland, Queen's College; Rev. W. Prowse, St. Edmund's Hall; Rev. J. Forbes Jowett, St. John's College.

BACHELORS OF ARTS.—G. Brettell, Esq. and H. Heaton, Esq. Exeter College, Grand Compounders; B. Young, St. Edmund's Hall; J. Hanbury, Christ Church; J. Holcombe, Jesus College.

CAMBRIDGE, Oct. 6.

The following gentlemen, Bachelors of Arts of Trinity college, were on the 1st inst. elected foundation Fellows of that society:

S. Hawkes, J. Hutton Fisher, T. Thorp, W. Sidney Walker, Horatio Waddington, C. Smith Bird, T. Pell Platt, H. Coddington.

CAMBRIDGE, Oct. 13.

The following gentlemen were on Tuesday last admitted to degrees:

MASTER OF ARTS.—Stephen Croft, of Trinity college.

BACHELORS OF ARTS.—W. Evans, of Jesus college; Woodthorpe Collett, of Catherine Hall; J. N. Davidson, of Queen's coll.; P. Leigh and J. H. Mauderville, of Trin. coll.; Brooke Greiville, of St. John's coll.

There will be congregations on the following days of the present term:

Wednesday, Oct. 25, at eleven; Wednesday, Nov. 8, at eleven; Wednesday, Nov. 29, at eleven; Saturday, Dec. 16, (end of term) at ten.

#### FINE ARTS.

To the Editor of the *Literary Gazette*.

Sir.—In consequence of reading a paragraph inserted in your Weekly *Literary Gazette*, under the head of Varieties, I observed the following. (See No. 191.)

"The busts of celebrated Italians, which have hitherto adorned the Pantheon at Rome, were lately removed to a gallery prepared for that purpose in the Capitol, where it is in contemplation to form a museum of all the celebrated men that Italy has produced. The writer of an article inserted in the *Allgemeine Zeitung* strongly censures the removal of the busts of Raphael, and of other distinguished men who were buried in the church of the Rotunda (the Pantheon). It is, however, extremely doubtful whether the mortal remains of Raphael were deposited in the church; and, with the exception of *Carlo Maratta*, it is pretty certain that none of the great men, whose busts have lately been removed, were buried there."

It appears to me, that you have been misled in the assertion you have made, "that it is doubtful whether the mortal remains of Raphael were deposited in the church;" and with the exception of *Carlo Maratta*, &c.

It is universally acknowledged, by the Romans themselves, that the mortal remains of Raphael were deposited in the Rotunda, and at the expense of *Carlo Maratta*; under his bust is this distich, composed by Cardinal Bembo.

"Ille hic est Raphael, tumuit quo sospite vinci.

"Rerum Magna Parens, et moriente mori."

It is thus elegantly rendered into Italian by Bellori—

"Questi è quel Raffaël, cui viva vinta.

"Esset tembo Natura, e morto estinta."

The remains of *Carlo Maratta* lie deposited in the church of Santa Maria degli Angeli, built by Angelo, on the ruins of the baths of Diocletian. The tomb of *Salvator Rosa* corresponds with it. As *Raphael*'s

omb was erected at the expense of Carlo Maratta, I thought you might have made some confusion, misconceiving the remains of Carlo Maratta to have been buried in the Pantheon, when Raphael's alone were interred there.

I certainly censure the removal of the busts of those distinguished characters, particularly since the immortal Raphael was deposited there; for it is sacrilege itself to separate his bust from his deposit; and no lace can be better adapted for such a purpose than the Pantheon. It is an acknowledged fact, that every artist who studied at Rome is ambitious of having his bust placed at that superb temple. Canova is full with the happiness he is sure to enjoy in that respect.

What a pity, that England should be deficient in such public institutions, where emulation is excited, and merit handed down to posterity! Excuse the liberty I have taken, and believe me your constant reader.

W. V.

## ORIGINAL POETRY.

(By Correspondents.)

## SONNET.

To Ismael Fitzadam, the Sailor-Poet, author of the "Harp of the Desert," &c.

laid of the inclement and infertile deep:  
Whose lone harp, cradled on the rushing wave,

Was strung to the loud storm and battle brave,

ounding irregular, as the surges sweep,  
is native sea-notes to the shock, or sleep

Of conscious waters—all unheard, too, save  
By some charm'd ocean-nymph, from pearly cave,

larkening to wonder! Bard, foredoom'd to weep!

thy very name, proscribed and desolate man!  
Bears ominous impress of thy destiny,—  
like the first lunel, an unseasonal ban

Has to the desert driven thy muse and thee;  
but rain, alas! her supplicating cry,  
Vorse than the Hebrew, thou art left to die!

ANNA MATILDA.

## VAUCLUSE.

all rocks begirt the lovely valley round,  
like barriers guarding its sweet loneliness;

louds rested on their summits, and their sides  
burken'd with aged woods, where Iwy twined

ad green moss grew unconscious of the sun:  
lacking in the dwelling place of Death and Night,  
an angry river came; at first it traced

a course in wrath, and the dark caverns rang  
With echoes to its hoarse and sullen roar;

but when it reach'd the peaceful valley, then,  
like woman's smile soothing wild rage away,  
he might light upon its troubled waves—

made the waters, like a curbed steed,  
huffed and foamed angrily, but softly flowed,  
bright unbroken mirror, for the kiss

of the fair children of its fragrant banks,  
and close beside uprose the tree whose form  
had once been beauty's refuge—sacred shade!

Which even the lightning dares not violate,  
he hero's trophy and the bard's reward—  
he faded laurel.—

Vaucluse! thou hast a melancholy charm,  
A sweet remembrance of departed time,  
When love awoke the lyre from its long sleep.  
Unbound the golden wings of poetry,  
And in thy groves the graceful Petrarch sought  
A shelter where his soul might wander free,  
Dwelling on tender thoughts and minstrel dreams,  
All that the bard can feel in solitude.  
Thy name is in his songs, and it will be  
Remembered, when thy woods shall wave no more.

The bee, when varying flowers are nigh,  
On many a sweet will careless dwell;  
Just sips their dew, and then will fly  
Again to its own fragrant cell:—  
Thou too 'thy heart, by fancy led,  
A wanderer for a while may be,  
Yet soon returning whence it fled,  
It comes more fondly back to thee.

L.

"Yesterday the Lord Bishop of Lincoln (late Bishop of this see) preached his farewell sermon at our Cathedral, from Corinth. xv. last verse.—'Be ye steadfast, immovable,' &c.—*Exeter Paper*, Oct. 1, 1820."

## EPIGRAM.

Not what I do, but what I say,  
My brethren should be noted,  
"Be ye immovable," I pray,  
While I move-off promoted.

But good, my Lord, this version looks  
Like novel variation:

Nay, nay, my friends, shut up your books,  
Mine is the true Translation.

JUVENILES.

RETORT COURTEOUS.—Oct. 14, 1820.

"How will your friends at court," quoth Hal to Bob,

Chuckling at ministers' supposed perdu;  
"How will your friends get through this dirty job?"

"I think," quoth Bob, for that they'll send  
for you."

DOT-AND-GO-ONE.

Theodore Borne's Prayer during the Battle,  
composed about an hour before his death: and  
beautifully set to music by Hummel.

(Translated by a Foreigner.)

Father, to Thee I pray!  
Dreadful surrounds me the roaring of battle;  
Awful the destruction of raging metal;  
Disposer of fate, I pray to thee,  
Father, thou guide me!

Father, thou guide me!  
Guide me to victory or to my tomb;  
Lord! from thy hands I accept my doom!  
God, as thou wilt, so conduct me,  
God, still I praise thee!

God, still I praise thee!  
As well to the rustling of leaves that are falling,  
As in the surrounding thunder appalling,  
Thou fountain of bliss, I see thee;  
Father, thou bless me!

Father, thou bless me!  
In thine own hands I now lay my fate,  
Thou may'st now take it—thou giv'st it of late.  
For living, for dying, Oh! bless me,  
Father, I praise thee!

Father, I praise thee!  
We do not contend for ambition, oh Lord!

What's sacred to all, we defend with our swords.  
Thus victorious, or dying I praise thee,  
God, to thee I commend me!

God to thee I commend me!  
When pale death now soon shall sit on my brow;  
When my opened veins for my country shall flow,  
To thee, oh God! Obedience I vow,  
Father, thou bless me now!

On seeing the statues of Hercules and Hygieia over the entrance of a Quack's house.

The empiric has stuck Health and Strength o'er  
his door,  
As, in semblance, he'd say, "Come, and sicked  
no more!"

But in sooth, 'twould be construed much more  
to my mind,

"If you once enter here, you must leave these  
behind!"

## A lame Reason.

A brawny carter pass'd me on a beast  
That seem'd to promise dogs an early feast;

I saw with pity the poor tottering jade  
Thump'd into motion all but retrograde;  
And wond'ring how a limping foundler'd hack  
Could stir with so much "dead weight" on his back,

I spoke my doubts of "thither won't" security,  
He answer'd straight with all his tribe-like  
purity,

And bid me my anxiety abandon—  
"The brute must go,—he ha'n't a leg to stand  
on!"

## SONNET.

"Più luce già quond' i feci! mal sonno,  
Che del futuro m'a squarcio l'velame."

Whilst on the couch of pain and sorrow laid,  
Mourning the past, that ne'er can be recall'd,  
I cast my eyes toward the opening shade  
Of future years—and start, at once, appall'd.

There shadows direful, and dim shapes appear  
Emerging slowly from the spectral gloom;  
Disease, and pale remorse, love, hate, and fear,  
Are seen to drag their victim to the tomb.

The blighted buds of youth that promis'd fair,  
Scath'd by the lightning and the blasts of life,  
Bright hopes and fond desires he scatter'd there,  
The mock and scorn of all these forms of strife.

Thus, in the soul's dark twilight, I behold  
That deadly ray, by many a dream foretold.

## SKETCHES OF SOCIETY.

## THE DUKE OF BORDEAUX.

The birth of this important child has given great animation to France. As is usual in that country, charities, illuminations, dramas, poems, medals, compositions, and offerings of every kind, celebrate or commemorate the event. As a partial sketch from this picture of national manners, we annex a specimen of some of the poetical effusions. The three following allude to the firing of 24 cannons, which was the appointed signal for the birth of a boy.

Proclame, airain bruyant, les transports de la France  
Un beau lis, en tombant, nous lassait un bouton;

Une nuit de douleur nous légua l'Espérance,  
Une nuit de bonheur nous présente un BOUTAON.

*Le récit d'un royaume écroulé, impromptu.*  
N'j'a douze bons coups, m'écriai-je à l'anore!  
Écoutons... écoutons. le canon tire encore!  
C'est un prince, grand Dieu!... Cette fois, je le  
dis,

Je ne veux désormais plus croire aux *écroulés*.

*Grande peur, grande joie, impromptu* écrit sous  
la dictée d'une pièce de vingt-quatre

Le canon! comptons bien. "Un—qu'on fasse  
silence.

Dieu—chut! *très*—dix encore et Dieu sauve la  
France!

Quatre—ah, grand Dieu! *cinq*—sir—comme le  
cœur nous bat!

*Sept*—console-nous... *huit*—de l'horrible attentat.  
*Nuf*... D'un bon peuple—dix—sance la prière!  
*Onze*—du plus beau jour fais briller la lumière!  
*Douze*—quel effort! *treize*... ô France! l'en-  
tends-tu?

L'enfer nous prit Berri, le ciel nous l'a rendu.

The next verse is from a piece, by M. De  
sangiera, entitled *La France Consolée*.

Gloire, amour au prince éhri,  
Qui vient de nous rendre Berri!  
Béatissime infamorpheose!  
Le ciel a repris son azur;  
Le jour est plus beau, l'air plus pur,  
Le cyprès fait place à la rose.  
De pourpre et de la revêtu,  
Un enfant sourit à la France,  
Et les pleurs d'un peuple abattu  
Sont essuyés par l'innocence,  
Gloire, amour, etc.

The subjoined specimen is also pretty—it  
belongs to a poem by M. Théaulon.

Viens à mon luth, et que ce jour célèbre  
T'arrache enfin au silence, à l'oubli.  
Dépouille-toi de ce voile funèbre  
Où ma douleur t'avait enserpillé.  
Que notre deuil ne pare d'espérance!  
Dans l'avenir, pour nous, rien n'est perdu,  
Chantons encore les Bourbons et la France...  
Berri nous est rendu!!!

The journals, and other periodicals, are  
filled with tributes of this kind. Among the  
medals struck on the occasion are these:—

1. France presenting the young prince to  
Æaculapins, that his health may be preserved  
mid his life prolonged: Minerva covers him  
with her shield. The legend "*Le Prince*  
*est né, nos vœux sont exaucés*." On the  
reverse, the portraits of the Duke and  
Duchess of Berri, surrounded by a wreath of  
immortality.

2. The head of the young prince, with his  
names, titles, and date of his birth. The  
reverse, an anchor shaded by a young lily,  
plant rises majestically on the left: legend,  
"*Présent du Ciel*."

3. Heads of the father and mother. Re-  
verse, the infant in his cradle, strangling,  
like the young Hercules, a horrible serpent  
with each hand. The surrounding motto,  
"*Fata aspera Vinus*."

4. Heads as in the foregoing, but the re-  
verse has, instead of the babe, an emblem of  
him, a new-blown lily at the foot of the  
throne, both protected by the Egede of the  
tutinary Genius of France. The legend is,  
"*Vivez pour le servir, mourez pour le dé-  
fendre*."

5. France filled with love presents a new  
horn infant at the altar—the legend is very  
appropriate and affecting—" *Tu Carolus*  
*Matri, nobis Henricus*."

At 11 o'clock, on the 29th Sept. the an-  
nexed brief petition was presented to Mon-  
sieur—" *Monseigneur, ma femme est ac-  
couchée cette nuit à la même heure que ma-  
dame la duchesse de Berri. Nous sommes*  
*bien pauvres!*"—The immediate reply was  
a present of 1200 francs.

The following anecdote is also worthy of  
preservation:

It was still dark when the order was given  
to notify the auspicious birth of the young  
prince to the inhabitants of the capital. It  
was observed to the Duc de Richelieu, that  
it might perhaps be better to wait for the  
break of day to fire the cannon; to which  
he replied—" *For news so glorious, it is*  
*break of day at all hours*."

A divertimento, entitled "*Dames de*  
*Bordeaux*," has been produced on the oc-  
casion at the Theatre des Variétés. It con-  
sists chiefly of complimentary verses of the  
Dames of the *Halle*, on presenting a cradle  
to the Duchess of Berri, and was of course  
loudly applauded. At the Porte St. Martin  
a similar piece, called "*Paris, le 29 Sep-  
tembre 1820*," has been got up.

## THE DRAMA.

COVENT GARDEN. *Cymbeline*.—On Wed-  
nesday the play of *Cymbeline* was revived  
at this theatre; and although Charles Kemble  
and Macready were, for the first time, the  
Leonatus Posthumus and Iachimo; yea,  
and though Farley was the Cloten, and we  
verily believe, one Mr. Norris the Doctor  
Cornelius, it seemeth that but for its allu-  
sions to the politics of the day, this drama  
would not have been ravished from its  
meritorious quietude. It is not for us to  
maintain that Mr. Brougham's quoting is  
not a sufficient reason for Mr. Harris's act-  
ing; since they are both excellent managers,  
and know very well what they are about.  
But we do with great humility conceive, that  
it is a dangerous and foolish thing in the  
director of a place of entertainment, to de-  
viate so mainly from "the purpose of  
playing, (whose end both at the first and  
now, was and is, to hold as 'twere the mirror  
up to nature; to show Virtue her own  
feature, Scorn her own image," &c.), as to  
take any hint from the present exhibition in  
another house, under the notion of thereby  
pleasing the public. In sober truth, it is an  
unbecoming thing to seek for occasion to in-  
troduce party squabbles into the theatre; and  
we are surprised that Covent Garden, hither-  
to so free from that reproach, should have  
fallen into the ill-judged practice. There is  
nothing in *Cymbeline* itself to induce its re-  
vival. The beautiful passages, which are  
probably Shakspeare's, and the lovely sim-  
plicity of feminine character in Imogen, are  
only delectable in the closet, and the drama  
must for ever remain one ineffective in re-  
presentation. The plot, or rather implica-  
tion of several plots, is artificial; the devel-  
opement of character bizarre and imperfect;

the manners and sentiments unsuited to the  
era to which the story belongs; the incidents  
improbable; the mass of the dialogue below  
the level of poetry; and even where poetical  
(as in the beginning and end of Iachimo's  
soliloquy in the bed room of Imogen) marred  
for delivery by the circumstances in which  
the actor is placed. Accordingly the play  
went off very heavily, and as it was mere-  
ly meant to catch the effervescence of the mo-  
ment, no pains were taken to produce ap-  
propriate scenery and decorations. The  
landscapes presented the old exotic-covered  
canvases, whereon flowers flourished unknown  
to Britain for a thousand years posterior to  
the date of *Cymbeline*; and the worthy  
king's wife, daughter, and courtiers, were  
dressed respectively in glossy play-house  
satin, Glasgow muslin, and bepanopied em-  
broidery! Cloten's serenaders were wrapt  
in the dominos of the maskers in *Romeo*  
and *Juliet*, and every thing belonging to  
these Britons of the age of Augustus Cæsar,  
betrayed but too plainly, that the ground  
upon which *Cymbeline* was brought forward  
at this period was one beneath the credit  
of a respectable theatre to proceed upon.  
Dull as it was, we have very little to say  
about the performances. The wagger scene  
was skilfully managed, by Messrs. Kemble  
and Macready; and the scene in which the  
virtue of Imogen is assayed, admirably done  
by the latter. Still more spirited was that  
where Iachimo convinces Posthumus of his  
wife's infidelity: and we may add as its equal  
those parts of the tedious vidding up, in  
which Posthumus is driven to despair by  
the confession of the Italian. At no other  
time was the slightest sensation excited in the  
auditory, save indeed when passages occurred  
calculated to turn a spot devoted to elegant  
amusement, into a bear-garden and factions  
arena. It is but doing justice to the good  
sense of the people, however, to state, that  
even here the majority evinced no disposition  
to enter into the folly, though the recogniz-  
ing plaudits were loud and tumultuous when,  
among others, the following passages were  
spoken. When in proof of Imogen's adul-  
tery, the bracelet given to her is produced,  
*Philario* says—

— It may be probable she lost it; or  
Who knows if one of her women, being or-  
rupted,  
Hath stolen it from her.

Again, *Pisanio*, alluding to his master's  
suspicions, exclaims—

— What false Italian,  
(As poisonous tongues as hand) has prevailed  
On thy too ready hearing? Disloyal! no,  
She's punished for her truth, &c.

And again, the noble picture of slander—

— No, tis Slander,  
Whose edge is sharper than the sword, whose  
tongue

Out-venoms all the worms of Nile, whose breath  
Rides on the posting winds, and doth belie  
All corners of the world.

Kings, queens, and states,  
Maid, matrons, may the secrets of the grave,  
This viperous Slander enters.

These, and a few similar passages, were  
seized by a number of the audience and

judly cheered; thus the design in getting p the play could not be said to fail altogether, but we do not think it will enrich the "usury." Posthumus' speech, in which the a renowned phrase, "as chaste as unsunned now" occurs, was omitted. The sweet glee, Hark, hark, the lark at heaven's gate sings, as enclosed; and we have but to sum up, y noticing that Miss Foote was a pretty woman, both as girl and boy, though in ying to be interesting or pathetic, she sometimes looked as if (according to the saying) he could not help it; Farley a thorough but modern Cloten; and Abbott a good blunt 'oloydre. The other performers had no opportunity of distinguishing themselves.

Astley's amphitheatre concluded its amusing diversions on Wednesday, till Easter Monday bids it open its doors again to holiday ecllers.

The Adelphi Theatre has recently renewed a operations, but we have not yet had time o enable ourselves to report upon them.

The Olympic is about to open with a company comprehending several of our best omedians; Munden, Dowton, Wrench, and others.

And last, not least, in theatrical chit-chat, be *Little Theatre*, Haymarket, closed on Saturday. The farewell address alluded to be formation of an *Independent House and Company*; the secret of which allusion we elieve is, that a number of the most eminent performers of the time project the establishment, at the new theatre, when built, f a dramatic concern something on the oting of such matters in Paris, in which ey shall themselves be the proprietors, managers, and principal supports in the way facting. In short, that the company shall e a joint stock company, and have and per-min stock pieces; and controul by an elec-tive executive, and share profits (if any), and rovide for the sick and superannuated, out f whatever overflowing fund overflowing uses enable them to realize. So whispers amour; and it is easy to foresee, that such a event (the patentees will call it a conspiracy) will have a prodigious influence on our ation.] stage.

## VARIETIES.

On the 7th October, at the palace of le French Institute, were distributed the rizes decreed by the Royal Academy of ine Arts, for painting, sculpture, architecture, engraving, and musical composition. he young gentlemen who obtained the ighest honours, will, according to the relations, be pensioned by the King for five ears in Italy or in Paris. Their names are ontant, Jacquot, Villani, Loricchon, and eborne, élèves respectively of Le Gros, osio, Percier, Forster, and Cherubini.

*Curious circumstance.*—On Wednesday, e 27th ult. the wife of a butcher, named pence, residing at Gale, near Hawes, ealsdale, Yorkshire, while paring some

boiled potatoes for dinner, cut off a part of one and ate it; when she discovered a small black spot on the remaining part; and on her applying her knife to take it out, she found the potatoe hollowed in the middle, and a lizard nearly four inches long concealed in it, but without any apparent orifice by which it could have introduced itself. The circumstance was not much noticed at the time, but in about two hours she became alarmingly ill, with all the usual symptoms of being poisoned; and continued so till about ten o'clock at night, when (having previously taken an emetic) she gradually recovered, and is now perfectly well. *Provincial Paper.*

The skin of the elephant, which died some time ago at the *Jardin du Roi* in Paris, has been stuffed and deposited in the Cabinet of Natural History. It affords a perfect representation of the animal.

## LITERARY NOTICES.

The prolific author of *Waverley*, whose second genius seems to be as inexhaustible as it is extraordinary, has announced another romance, the title of which is "*KENNILWORTH*." From this name we presume that it will resemble *Ivanhoe* more than any of the other productions of the same pen; and from the circumstance having transpired, we expect that we may look for its completion soon after Christmas.

The title of Lord Byron's forthcoming tragedy is, we hear, "*The Doge of Venice*." We have before mentioned that it is to be published, not acted.

We hear of no other very remarkable works on the anvil. Belzoni seems to be retarded, like every thing else, till the public mind is more suited to rational objects. The account of the rebellion of 1745 is also delayed; the Fudge Family in Italy stands in need of a new annunciation, to induce us to believe that it will ever appear; and in short, (Heaven mend us the while) the labours of the literary are every where standing still till the labours of the engrossing political press will admit "a rival near the throne."

Art. III. Martin Fernandez de Navarrete, Vida de M. Cervantes Saavedra, &c. —M. Raynouard.

\* I conclude this article, says M. Raynouard, with two remarkable circumstances.

Madrid Seville Lucerne, Toledo, Esquivias, Alenxar de San Juan y Conseptra, pretended to the honor of having been the birth place of Cervantes. It is now acknowledged, that he was born of a noble family at Alcalá de Henares, Oct. 9th 1547. This claim of seven cities to the birth of Cervantes, offers a singular conformity with Homer, whom seven cities likewise claimed. Another circumstance which I think it right to place by the side of the former is, that Cervantes and Shakespeare died on the same day.

## METEOROLOGICAL JOURNAL.

OCTOBER, 1820.

Thursday, 12.—Thermometer from 35 to 52. Barometer from 30, 20 to 30, 23.

Wind N. 4.—Generally clear.

Friday, 13.—Thermometer from 26 to 52.

Barometer from 30, 18 to 30, 04.

Wind N. and N. W. 4.—Generally cloudy; rain in the morning.

Saturday, 14.—Thermometer from 41 to 54.

Barometer from 29, 96 to 29, 50.

Wind E. 4, and S. E. 3 and 4.—Generally cloudy, with rain at times in the afternoon.

Rain fallen .025 of an inch.

Sunday, 15.—Thermometer from 52 to 64.

Barometer from 29, 11 to 29, 29.

Wind S. W. and S. b. W. 3 and 4.—Cloudy and showery till noon, the rest of the day generally clear.

Rain fallen .225 of an inch.

Monday, 16.—Thermometer from 41 to 52.

Barometer from 30, 35 to 30, 31.

Wind S. W. 1, 3 and 5.—Cloudy, and showery.

Rain fallen .1 of an inch.

Tuesday, 17.—Thermometer from 42 to 59.

Barometer from 29, 00 to 29, 13.

Wind S. W. 3.—Clouds generally passing; showers in the morning.

Rain fallen .125 of an inch.

Wednesday, 18.—Thermometer from 36 to 56.

Barometer from 29, 15 to 29, 25.

Wind W. 4, N. W. 4 and S. W. 1.—Alternate sunshine and showers throughout the day.

Rain fallen .05 of an inch.

On Monday the 23rd at 17 minutes, 40 seconds after 11 o'clock, the 1st Satellite of Jupiter will emerge from an eclipse.

On Sunday the 29th, at 26 minutes, 20 seconds after 9, the 4th Satellite of Jupiter will immerse into his shadow, and will emerge at 43 minutes, 46 seconds after 12.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

*W'e do not think R. R.'s poem written with sufficient care for insertion.*

*We feel obliged by the letter signed "One of the Trade." In reply to which we have to state, that the Literary Gazette is invariably published before eight o'clock on Saturday morning. Whenever new publications appear to be of importance enough, we give an analysis of them; in other cases merely an opinion and extracts. It would require a Daily sheet to give an analysis of all.*

*A Judge's Lady has certainly taken up a hasty opinion; we have been exceedingly careful that what she mentions should not occur.*

*Very few good novels appear, and we hardly think them worth notice. Such as merit it are reviewed in due course for the gratification of such of our readers as take delight in that species of composition.*

\* *Continuation of the Essay on the Clergy in our next. Also an interesting paper on the important subject of Insanity; No. 1, of Letters from Paris, and several communications from friends.*

*Errata in our last Number.*

Page 671. col. 2. l. 13, for *Kernisweert's* read *Kernis's* nest.

Page 672. col. 2. l. 15, for *Bibliomanie* read *Bibliomania*.

### Miscellaneous Advertisements, Connected with Literature and the Arts.

#### NEW-INVENTED MEDALLION WATERS.

Messrs. J. and H. THOMPSON, No. 1, Wellington Street, Waterloo Bridge, Strand, beg leave respectfully to inform the Nobility and Gentry, that they have recently invented a new species of **WATERS**, of a very elegant and superior description. They possess all the beauty of the Camel, have the adhesive quality of wax, and close a note or letter with the facility and security of a wafer. Messrs. T. have on sale a considerable number of devices, which, being variously coloured, and on grounds of different tints, exhibit the delicacy and taste of this novel invention to perfection.

#### BOOKS PUBLISHED THIS DAY.

**THE EDINBURGH REVIEW**; or, Critical Journal. No. XLVIII. Contents:—1. Connotation of Rocks. 2. Plan for a Translation of Tithes. 4. Farington's Life of Sir Joshua Reynolds. 5. Buckard's Travels in Nubia. 6. Edgeworth's Memoirs. 7. Henry's Jacobite Relics. 8. The Sketch Book, by Geoffrey Crayon, Gent. 9. Ancient Laws of the Scandinavians. 10. Krato's Poems. 11. The New Plan of Education for England. Quarterly List of New Publications. Printed for Archibald Constable and Co. Edinburgh; and Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, all the preceding Numbers.

Handsome printed on foolscap 8vo. price 8s. boards.  
**FANCY'S WREATH**, a Collection of Poems, on various Subjects. By J. L. STEVENS.

"Gie me as spark o' Nature's fire,  
That's at the learning I desire;  
Then tho' I drudge thro' dais an mire  
At plough or cart,  
My muse, tho' homely in attire,  
May touch the heart!"

Printed for Scatcherd and Letterman, Ave-Marie-lane; and sold by Ellisell and Crouch, Plymouth; Gray, Stonehouse; and all other booksellers.

#### THE CLASSICAL JOURNAL, No. XLIII.

(Continued Quarterly). Containing a Variety of Classical, Biblical, and Oriental Literature. With Greek, Latin, English, and French Texts interpreted. Contents:—On the Origin, Progress, Prevalence, and Decline of Idolatry. Dr. B. Rahkensi celebri quondam reperto literario. On the Ancient British Language of Cornwall. Notice of "The Enthusiasm in Methodists and Papists considered:" by Bishop Lavington. A Platonic Demonstration of the Immortality of the Soul. Dissertation Historique, Littéraire, et Bibliographique, sur la Vie et les Œuvres de Macrobe. The Iphigenia of Timotheus, a Prize Poem for the J. A. J. On the Knights of Rhodes. On the Theology of the Greeks. On the Different Opinions which have been formed of Cicero. An Inquiry into the Opinions of the Ancient Hebrews, respecting a future Immortal Existence. De Aristophanis Fragmentis. Essay "On the evidence of Scripture that the Soul, immediately after the Death of the body, is not in a state of sleep or insensibility; but of happiness or misery; and on the moral use of that doctrine." Euripidis Phædonia Fragmenta. A. M. Paris. descriptis. Miscellaneous Classics. Cambridge Prize Poems. For 1850. Cambridge Triposes, for 1818. Manuscripts found at the Parthenon. On the PLAGIARISMS of C. J. B. Blandfield. Aristophanis Fragmenta emendata. G. B. Hints to form the Ovidian Dutch. Reply to the Quarterly Reviewer of Stephens' Greek Thesaurus. Adversaria Literaria. Claudian, Carm. 1. 6. Note of Barnes. Alexander the Great. The Egyptian Cabinet. Account of the Library of the University of Göttingen. Oriental Customs. Literary Intelligence. Sold by Sherwood and Co.; Longman and Co. London; and all other booksellers.

A General Index to the first Forty Nos. of the Classical Journal, price 6s. for the use of Libraries as a book of reference. It is intended also to bind up at the end of the 20th Volume.

#### THE SKETCH BOOK OF GEOFFREY CRAYON, Gent. vol. 2. Printed for John Murray, Albemarle Street.

By the same author, printed uniformly with the above, a new edition of  
**KNICKERBOCKER'S HISTORY OF NEW YORK**, from the beginning of the World to the end of the Dutch Dynasty. Bro. 12s. Also, Sketch Book, vol. 1. 2s. 12s.

#### Cathedral Antiquities.

Price 12. 12s. Medium 4to.; 8s. 3s. Imperial 4to.; 6s. 6d. royal folio.

**THE HISTORY AND ANTIQUITIES OF THE REK AND CATHEDRAL CHURCH OF LICHFIELD**; illustrated by a Series of 16 Engravings of Views, Elevations, Plans, and Architectural Details of the Architecture of that Church; with Biographical Anecdotes of the Bishops of Lichfield and Coventry. By JOHN BRITTON, F. R. S. A. Published by Longman, Hurst, Rees, Orme, and Brown, Paternoster Row; Taylor, 36, High Holborn; and the Author, Portico Cottage, Turret-ack Square. Of whom may be had, by the same author.

1. **THE HISTORY, &c. OF SALISBURY CATHEDRAL**, with 31 plates, 8s. 3s. medium 4to.; 5s. 3s. imp. 4to.; crown folio, 8s.; royal folio, 11s. 6d.

2. **THE HISTORY, &c. OF NORWICH CATHEDRAL**, with 24 plates, 7s. 10s. medium 4to.; 4s. 6s. imp. 4to.; 6s. 10s. crown folio; 8s. 10s. royal folio.

3. **THE HISTORY, &c. OF WINCHESTER CATHEDRAL**, with 30 plates, 8s. 3s. medium 4to.; 5s. 3s. imp. 4to.; 8s. crown folio; 11s. royal folio.

4. **THE HISTORY AND ANTIQUITIES OF THE METROPOLITAN CHURCH OF YORK**, with 30 engravings, 13s. 10s. medium 4to.; 6s. 6s. imp. 4to.; 10s. crown folio; 13s. 10s. royal folio.

5. **AN HISTORICAL ESSAY ON REDCLIFFE CHURCH, BRISTOL**, with 12 Engravings, royal 8vo. price 16s.; medium 4to. 11s. 6s.; imp. 4to. 11s. 6s. boards.

6. **THE ARCHITECTURAL ANTIQUITIES OF GREAT BRITAIN**, in 4 vols. medium 8vo. 2s. 6s. boards.

7. **CHRONOLOGICAL ILLUSTRATIONS OF THE ANCIENT ARCHITECTURE OF GREAT BRITAIN**, Nos. 1 to 6, price 12s. each, medium 4to.; and 12. imp. 4to.

The History and Illustrations of Oxford Cathedral will be published before Christmas next, and will consist of 11 Engravings, with the necessary letter-press. It will be completed in two Numbers, price 12s. 4s. medium 4to. and 12. imp. 4to.

#### New Latin Translation of Homer's Iliad.

In two volumes, Bro. price 12s. 4s. boards.

**THE ILIAD OF HOMER**, Translated into English Prose, so literally as the different Idioms of the Greek and English Languages will allow; with Explanatory Notes. By a Graduate of the University of Oxford. Printed for G. and W. B. Whittaker, 13, Ave-Marie-lane, London; and Munday and Slater, Oxford.

#### Goldsmith's England—continued to 1815.

In four vols. Bro. price 12s. 12s. boards, the seventh edition, corrected.

**THE HISTORY OF ENGLAND**, from the earliest Times to the Death of George the Second. By OLIVER GOLDSMITH, M. B. With a Continuation to the Treaty concluded at Paris, in the year 1763. By CHARLES COOTE, LL. D. Printed for F. C. and J. Rivington; J. Otridge; J. Mason; Scatcherd and J. Letterson; J. A. Arch; J. Richardson; J. M. Richardson; J. Cusheley Longman and Co.; Cadell and Davies; J. Boucher; Baldwin and Co.; G. and W. B. Whittaker; J. Black; J. Aspinwall; Rodwell and Martin; R. Saunders; and E. Edwards. Of whom may be had, **GOLDSMITH'S HISTORY OF ROME**; 2 vols. Bro. price 14s. 10s. The same abridged, 12mo. price 3s. 6d. boards.

**GOLDSMITH'S HISTORY OF GREECE**; 2 vols. Bro. price 14s. 10s. The same abridged, 12mo. price 3s. 6d. boards.

**GOLDSMITH'S HISTORY OF ENGLAND**, abridged, 12mo. price 3s. 6d. boards.

The same, with Questions on each Chapter; Genealogical Tables of the British Sovereigns, &c. By A. Jamieson, 12mo. price 5s. boards.

In a few days will be published,  
In one vol. Bro. with six highly finished engravings.  
**A SYNOPSIS OF THE DISEASES OF THE LIVER**, and their Treatment. To which are prefixed, a short Anatomical Description, and a Sketch of the Physiology of that Organ. By BENJAMIN TRAVERS, F. R. S. Surgeon to St. Thomas's Hospital. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author.

An INQUIRY into the PROGRESS OF NATURE in Repairing INJURIES of the INTESTINES, illustrating the Treatment of Penetrating Wounds and Strangulated Hernia, in Bro. with plates, price 15s. 6d.

Also,  
**SURGICAL ESSAYS**, By Atley Cooper, F. R. S. Surgeon to Guy's Hospital, and Benjamin Travers, F. R. S. Part I. the 3d. edition, and Part II. the 2d. edition, price 10s. 6d. each.

The 2d. edition, in 4 vols. 12mo. price 12. 8s. boards.

**TALES OF THE HEART**. By Mrs. OPIE. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same Author.

1. NEW TALES, 4 vols. 12mo. 12s. 8s. boards.
2. FATHER AND DAUGHTER, 12mo. 4s. 6d. boards.
3. TALES OF REAL LIFE, in 3 vols. 12mo. boards.
4. SIMPLE TALES, 4 vols. 12mo. 12s. 10s. boards.
5. TEMPER; or, Domestic Scenes, 3 vols. 12s. 10s. boards.

No. 197.

SATURDAY, OCTOBER 28, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

KENILWORTH.

As the "inglorious death" of Kenilworth Castle alluded to in the following account is likely to be so soon converted into immortality by the pen of the "mighty Wizzard of the North,"\* we trust that the following historical sketch† of that celebrated place will be deemed more than usually interesting at the present time.

The town of Kenilworth is situate five miles to the south-west of the city of Coventry, and is at nearly the same distance, on the north-east, from the town of Warwick. Sir William Dugdale observes, that, previous to the conquest, Kenilworth was a member of the neighbouring parish of Stoneleigh, being ancient demesne of the crown, "and had, within the precincts thereof, a castle, situate upon the bank of Avon, in the woods opposite to Stoneley Abby. Which castle stood upon a place called *Hom* (Holme) *Hill*; but was demolished in those turbulent times of war betwixt King Edmund and Canutus the Dane." At the time of the Norman Survey, Kenilworth was divided into two parts, one of which was styled *Optane*, and was held of the king by Albericus Clericus, "in pure Almes." The other portion was possessed by Richard the Forester. In the reign of Henry I. the manor was bestowed by the king on Geoffrey de Clinton, who founded here a potent castle and a monastery. But, though a fortified residence and a religious foundation were usually, in the early ages, the harbingers of wealth and consequence to a neighbouring town, Kenilworth does not appear to have ever attained much distinction for greatness of population or traffic.

The Castle which, when firm through all its battlements and courts, and peopled with the baronial pride of the land, formed so fine an ornament to this town, still imparts melancholy grandeur to the neighbourhood by the unusual magnificence of its ruins. These remains, have indeed, powerful claims on the feelings of the examiner. They present one of the most splendid and picturesque wrecks of castellated strength to be found in any English county, and are united with various interesting passages of history—Geoffrey de Clinton, the founder of this structure, is believed to have been a man of mean origin.

\* See the last Literary Gazette for the announcement of a new novel, entitled, *Kenilworth*, by the author of *Waverley*.

† Selected from Brewer's *Beauties of England and Wales*, No. XVIII. Vol. 15—a very reasonable and entertaining work.

VOL. IV.

but his talents and acquisitions were so conspicuous, that he was made Lord Chamberlain and Treasurer to King Henry I. and, afterwards, was appointed Chief Justice of England. The castle, however, shortly passed from his posterity. In the reign of Henry II. it was possessed by the king, who placed here a garrison when his eldest son rebelled against him. The account of the provisions taken up for the use of this garrison is curious, as shewing the great value of money at the period. The following are the articles, and the sums paid for them: one hundred quarters of Bread Corn, 8l. 8s. 2d. (little more than 2d. per bushel.) Twenty quarters of Barley, 33s. 4d. One hundred Hogs, 7l. 10s. Forty Cows, salted, 4l. One hundred and twenty Cheese, 40s. Twenty-five quarters of salt, 30s. It is evident that the large fortified dwellings of the Barons, in these turbulent times, not only afforded a retreat to the more defenceless neighbours, but were probably made, on that account, a source of profit to their owners; for we find that the sheriff, in accounting for the emoluments derived from the ward of this castle, mentions "certain money that he received, in the nature of rent, from such as had their abode therein." In the reigns of King John and Henry III. large sums were expended on such buildings as assisted in rendering the fortress more defensible. The latter king, in the 38th year of his reign, granted the castle to Simon Montfort, Earl of Leicester, and Eleanor his wife, but only for their respective lives. When this Earl took arms against his Sovereign, he appointed Sir John Giffard Governor of the castle thus recently bestowed as a pledge of amity; and it was constituted, for some time, the great place of resort for the insurgent nobles. After the discomfiture and death of the Earl of Leicester, at Evesham, Simon Montfort, his son, continued to shelter himself in this fortress, where he was joined by those friends of the baronial faction that were able to effect an escape from the field of battle. Thus aided, he exercised his power with the ferocity usual in these barbarous ages. He is said to have sent abroad his bailiffs and officers with an affectation of sovereign authority; and bands of soldiery frequently issued from the castle, on predatory excursions, during which they spread the miseries of fire and sword with an unsparring hand.

These scenes of violence were interrupted by the approach of the king, who drew near, in much military pomp, at the head of an army of which the posse comitatus of Warwickshire formed a part. Simon Montfort, so arrogant while unopposed, now proved his cowardice to be equal to his cruelty, and secretly withdrew to France, nam-

ing Henry de Hastings Governor of the castle. Conscious of the great strength of the place, and willing to prevent effusion of blood, the king sent a message of fair promise to the Governor, demanding a surrender; but those within the walls not only rejected this clement overture, but basely insulted and maimed the messenger. The siege now commenced, and the garrison defended themselves with vigour. They were well provided with military engines, among which were some that cast stones; to a considerable distance; and they occasionally ventured on desperate and destructive sallies.

At length, although assured that the besieged were reduced to extremity, the king granted lenient terms, and took possession of the castle, after having lain before it for six months. He shortly bestowed the fortress so tediously acquired, on Edmund his younger son, whom he created Earl of Leicester and Lancaster.

In the seventh year of King Edward I. a costly and gallant tournament was held at Kenilworth. The knights were one hundred in number, and many were foreigners of distinction who entered England for the purpose of displaying their chivalry on this occasion. Robert Mortimer, Earl of March, was the promoter of the festival, and was the principal challenger of the Tilt-Yard. The ladies were, likewise, one hundred in number; and, as an instance of the splendour with which they were attended, it is recorded that they wore *silken mantles*. The exercises began on the eve of Saint Matthew, and continued till the day after the feast of St. Michael. The dances were not less gallantly attended than the lists; and to avoid all painful distinctions that might arise from an attention to precedence, the whole party banquetted at a *Round Table*.

On the attainer of Thomas, Earl of Lancaster, son of Earl Edmund, the castle returned to the crown; and was by Edward II. intended as a place of retirement, when he saw danger augmenting on every side. But this ill-fated king was doomed to be brought hither as a prisoner. Henry, Earl of Lancaster, conveyed him to this place; and here he received intelligence of his formal deposition by the Parliament held at Westminster. Shortly after his mournful reply to this information, he was hurried to Berkeley castle, the theatre of his last wretched hours.

In the reign of Edward III. John of Gaunt, Duke of Lancaster, obtained possession of Kenilworth, by his marriage with Blanch, daughter of Henry Earl of Lincoln, and Duke of Lancaster. The great aim of those

Several large stones, supposed to be a part of those hurled during this siege, are yet shown in the vicinity of the ruins.

who had hitherto conduced to the buildings of this strong castle, was security: to elegance of domestic accommodation, they were strangers. The reign of the third Edward produced a striking improvement in manners; and convenience and splendour of architectural arrangement were now first cultivated in England. By John of Gaunt large additions were made; and a great portion of the present ruins consist of the buildings raised by his munificence. In the person of King Henry IV. son to this Duke, the castle again became the property of the crown; and so continued till Queen Elizabeth conferred it on Robert Dudley, Earl of Leicester. This Earl expended great sums in adorning and enlarging the structure; and here he had the honour of entertaining Queen Elizabeth, in a manner so magnificent, that a notice of the festivities has been justly said to form an almost necessary page of the national annals. Her Majesty arrived on the 9th of July, 1575, and the splendid revelry of the season has met with a curious and amusing chronicle in *Laneham*, an attendant on the court. From this writer we learn that the Queen, after dining at Long Itlington, and hunting by the way, "was met in the park, about a slight shoot from the Brayz and first gate of the castl," by a person representing "one of the ten sibills, cumly clad in a pall of white sylk, who pronounced a proper poezie in French rime and meeter." This her "Majesty benignly accepted, and passed fourth unto the next gate of the Brayz, which, for the length, largenes, and use, they call now the Tylt-Yard; where a porter, tall of person, and wrapt also in sylk, with a club and keiz of quantitee according, had a rough speech full of passions, in meeter aptly made to the purpose." When the porter had concluded his harangue, six trumpeters, "clad in long garments of sylk, who stood upon the wall of the gate, sounded a tune of welcum." This strain continued while "her Highness, all along this Tylt-Yard, rode into the inner gate, where a person representing the Lady of the Lake (famous in King Arthurs Book) with two Nymphes waiting upon her, arrayed all in sylk, attending her highness coming." From the midst of the pool, where was a moveable island, "bright blazing with torches," the Lady of the Lake floated to land, and greeted her Majesty with "a well-penned meeter," expressive of "the auncientee of the castl," and the hereditary dignity of the Earls of Leicester.

A burst of music closed this part of the ceremony. Over a dry valley leading to the castle gates "was their frained a fayr bridge; and upon the first payr of posts were set two cumly, square, wyre cages," containing "live bitters, curlux, shoover-larz, hensheavz, Godwitz, and such lyke deinty byrds. On the second payr were two great sylver'd bolle, fealty apted to the purpose, fild with Appyl, Pearz, Oranges, Pounagarnets, Lemmuns," &c. The third pair of posts "in two such sylver'd Bolle, had (all in earz green and gold) Wheat, Barly, Oatz," &c. The fourth post, "on the leaft hand, had grapes in clusters, whyte

and red; and the match post against it had a payre of great, whyte, sylver lyvery Pots, for Wyne." The fifth pair had each "a fair large trey, streawd with fresh Grass," containing various specimens of sea-fish;—a costly presentation, at that period, for a host in an inland situation. The sixth pair of posts sustained a more elevated burthen, and ascended from tokens of good cheer to the dignity of armorial bearings. On them "wear set two ragged stavez of sylver, as my Lord givex them in armz, beautifully glittering of Armour thereupon depending." On the seventh posts, the last and nearest to the castle, were placed various instruments, symbolical "of the Gifts of Phobus;" tropes of the arts which should be raised on the pomp of chivalric bearings, and which were thus justly hinted to form the last result of dignified effort.

Over the castle gate, on a "Table beautifully garnisht above with her Highness Arms," was inscribed a Latin poem, descriptive of the various tributes paid to her arrival by the Gods and Goddesses. This was read to her by a poet, "in a long ceruleous Garment, with a Bay Garland on his head, and a skro in his hand." So passing into the inner court, her Majesty (*that never rides but alone*), there set down from her palfrey, was conveyed up to chamber, when after did follo a great peal of Gunz, and lightning by Fyrwork."

The festivities lasted seventeen days, and comprised nearly every pastime which the resources of the age could produce. The hart was hunted in the park; the dance was proclaimed in the gallery; and the tables were loaded from morn to midnight with sumptuous cheer. The park was peopled with mimic gods and goddesses, to surprise the regal visitant with complimentary dialogues, and poetical representations. More simple amusements were also studiously introduced; the men of Coventry performed their Hocktide play;† the rural neighbours were assembled to run at the Quintin; and a marriage, in strict consistency of country ceremonials, was celebrated under the observance of the Queen. Every hour had its peculiar sport. A famous Italian tumbler displayed feats of agility; Morris dancers went through their rude evolutions, by way of interlude; and thirteen bears were baited for the gratification of the courtiers. During the Queen's stay five gentlemen were honoured with knighthood, and "nyne persons were cured of the peyn-

\* As a proof of the hospitable spirit of the Earl, *Laneham* observes, that "the Clock Bell sang not a note all the while her Highness was there: the Clock stood also still withall; the hands of both the tabul stood firm and fast, always pointing at two a Clock," the hour of banquet!

† Founded on the Massacre of the Danes, in 1002. The actors were led to the spot of performance by Captain Cox, a person of so much humorous notoriety in his day that Ben Jonson names one of his masques, printed in 1640. "A Masque of Owls at Kenelworth, presented by the Ghost of Captain Cox, mounted on his Hobby Horse."

full and dangerous disease called the King's Evil."

Robert Dudley, Earl of Leicester, died without acknowledged legitimate issue, and bequeathed Kenilworth to his brother, Ambrose Earl of Warwick, for life; but he willed that the inheritance should descend to Sir Robert Dudley, his son, a person whose singular fortunes will meet with notice in our mention of the adjoining lordship of Stoneleigh. Sir Robert Dudley came into possession shortly after the decease of his father; but he quitted the kingdom, under the King's licence to travel for three years, and not returning, his estates were seized for the use of the crown. At this period a survey of Kenilworth was taken by the King's officers, from which we extract a few particulars calculated to convey ideas of the building and dependencies, when perfected by the labour of many ages.—"The circuit within the walls containeth 7 acres, upon which the walks are so spacious and fair that two or three persons together may walk in most places thereof. The castle, with the four gatehouses, are all built of free-stone, hewen and cut; the walls in many places of xv and x foot thickness, some more, some less, the least 4 foot in thickness square. There runneth through the grounds, by the walls of the castle, a fair pool, containing cxi acres, which at pleasure is to be let round about the castle. The circuit of the castle, marmours, parks and chase, lying round together, contain at least six or xx miles, in a pleasant country; the like, both for strength, state and pleasure, not being within the realm of England." Prince Henry, to whom the estate was resigned by the king, avowed his readiness to pay to Sir Robert Dudley the sum of 14,500*l.* for his title to the castle and domains, notwithstanding the legal incapacity to which he had rendered himself subject; but, owing to the death of the prince, not more than 3000*l.* were actually forwarded; and no part ever reached the fugitive Sir Robert. The estate was possessed by the king at the commencement of the last civil war, and it shared the disastrous fortunes of its regal owner. The castle of Kenilworth may figuratively be said to have died an inglorious death. A mighty building, like a mighty chieftain, seems to fall with consonant magnificence when it sinks beneath the pressure of conflict, amid the general havoc of a wide field of chivalry; but this castle crumbled into ruins under the petty assaults of sordid hands,—bannerless, and without one contending hero to sigh over its destruction. Cromwell granted the whole manor to certain officers of his army, who demolished the splendid fabric in order to make a market of its materials. The turrets once dismantled, the relics were open to every spoiler. But the hand of depredation is now stopped, and the fragments, left to the slow mroads of time, are likely to remain the memorials of baronial grandeur, for the melancholy gratification of many a succeeding age.

These ruins are very extensive, and present various combinations of the most romantic and picturesque description. They

are in many parts screened and defended from the rain and winds by nestling shrubs and clinging ivy, which impart a lovely mellowness to the general display. Of the original fortress it is believed that only one portion remains. This comprises three sides of a square tower, popularly termed Caesar's tower, an appellation often bestowed on buildings of a similar construction. The walls of this structure are in some places sixteen feet thick. The additions made by John Duke of Lancaster were large and massive. Considerable parts still remain, in different stages of decay, and they are yet distinguished by the term of Lancaster-buildings. That division of the pile that owes its foundation to the Earl of Leicester was of a magnificent character, and is likewise known by the name of its noble designer. In this part of the castle-runs are to be seen the relics of the great hall of entertainment, a fine baronial room, 86 feet in length and 45 feet in width. The Leicester buildings were composed of a brown flint stone, not well calculated to stand the weather; and this part of the pile, though the last erected, is perhaps the most ancient in appearance. The great Gate-House raised by the Earl is in better preservation. The entrance was formerly through an arched way, now walled in; and the building is at present occupied by a farmer. In one apartment is a large and curious chimney-piece of alabaster, ornamented with the armorial bearings, crest, and motto of the Leicester family. This chimney piece, together with the oaken wainscoting of the room in which it is placed, was removed to its present situation, from one of the principal apartments of the Leicester buildings. The fine lake, which formerly ornamented three sides of the castle, and was the scene of much pageantry during Queen Elizabeth's visit, is now nearly dried up, and has long ceased to be an attractive object.

The Monastery, before noticed as the foundation of Geoffrey de Clinton, in the reign of Henry I. was for canons regular of the order of St. Augustine, and stood to the east of the castle. This religious house was well endowed, and was valued at the Dissolution at 533*l.* 15*s.* 4*d.* clear. The remains are now few, and consist chiefly of some fragments of wall, and the mutilated gate of entrance. On digging in the vicinity of the ruins, about the year 1795, some considerable traces of the foundation, including part of an aisle, or cloister, were discovered.

Such has been and is Kenilworth: unquestionably an admirable scene for exercising the talents of the extraordinary person who has undertaken to delineate its features, at whichever of the important periods of its history he may chuse to paint the portrait, and throw the living colours of his genius over the faint obliterated canvas of its ancient existence.

*Transactions of the Historical and Literary Committee of the American Philosophical Society, held at Philadelphia, for promoting useful Knowledge.* Vol. i. 8vo. pp. 464. Philadelphia. 1819.

In our last and present number, we have indulged freely in the illustration of an American work of very considerable attractions, and which has made some noise on both sides of the Ocean. We now take up another performance, of the same country, with which we do not think the British public has much, if any acquaintance.

This volume, besides an official account of the institution whence it emanates, and of sundry particulars connected therewith, contains several papers of general interest, and as we conceive, of considerable curiosity for English readers. The principal are, "the History, Manners, and Customs of the Indian Natives who once inhabited Pennsylvania, &c." by the Rev. John Heckewelder; and two Papers on the language of the American Indians and of the Lenni Lenape, by that gentleman, and a Mr. Duponceau, the corresponding secretary of the society. It is to the former that we shall chiefly direct attention; but it may be expedient, in setting out, to say something respecting the Historical and Literary Committee itself.

Of this committee, which is indefinite in number, a list of 32 members is given; William Tighman is the chairman; and among the members, we observe the names of Thomas Jefferson, Dr. Logan, the grandson of William Penn's secretary, and Nicholas (we fancy Capt.) Biddle. It is a new, and the 7th branch of the American Philosophical Society\*; its object is to form a collection of annual records and maps, Indian treatises, &c. calculated to throw a light on American, and especially Pennsylvanian history; to obtain correct topographical, antiquarian, and statistical information, and to publish the same when advisable. The work now before us is the first result; and Mr. Heckewelder's account of the Indian nations, &c. (to which we now turn) is its first and most generally interesting ingredient.

The "Six Nations," and other Indian tribes, which were the occupants, though not the original inhabitants of Pennsylvania and the adjoining states when the whites arrived among them, were divided into two rival bodies; the one consisting of the Mengwe, Mingoes, (or Iroquois, or Six Nations, already noticed,) and the other of the Lenape, or as the Europeans called them, the Delawares, Mohicans, Nanticokes, &c.; whose territory being wrested from them, they were forced to wander to the west. Previous to this grand event, they had occupied these territories for centuries; and it is into this portion of

\* Previous to its establishment in 1815, there were but six classes; 1, of geography, mathematics, natural philosophy, and astronomy; 2, of medicine and anatomy; 3, of natural history and chemistry; 4, of trade and commerce; 5, of mechanics and architecture; and 6, of husbandry and American improvements.

their history that the author's enquiry is directed. Into the period, indeed, of their comparative innocence, while they possessed many honourable and virtuous qualities, and before that excessive degeneracy had ensued from their intercourse with civilized people, which has especially during the last half century marked their decadence and degradation. The Lenni Lenape, or Delawares, are Mr. Heckewelder's favourites; and he seems a little inclined to be theorical about them; he also discovers a few prejudices in his introduction, which, were the subject of nice importance, would diminish the weight of his authority; but on the whole, his views are a sufficiently impartial and clear for all the purposes wanted in the history of a savage race.

According to their traditions, the Lenni Lenape resided many hundred years ago in the western parts of America, but were induced by some unknown cause to emigrate eastward, when they stopped on the Namias Sipu, (Mississippi) below a similar settlement of the Mengwe, who had also come from a distant country. Farther east dwelt the Alligewi. Many wonderful things are told of this wonderful people. They are said to have been remarkably tall and stout, and even to have had giants among them. They appear to have built fortifications or encroachments, as the remains of walls and banks of earth, regularly thrown up with ditches on the outside, are still pointed out as their works on the Huron river, and near lakes St. Clair and Erie.

However that may be, a war ensued between them and the migratory Mengwes and Lenapes, who formed a junction in order to force their way across their country; and the Alligewi, being discomfited, fled down the Mississippi; while the Mengwe took possession of the lands in the vicinity of the great lakes and tributary streams; and the Lenapes settled in the parts towards the south. Both grew numerous and powerful; and in process of time, the Lenapes crossed the mountains and peopled the continent to the shores of the ocean, and principally the banks of the Delaware, Hudson, Susquehanna, and Potomac; and the Mengwe did the same by the St. Lawrence; so that they still continued to be neighbouring nations. Hostilities were long carried on between them; and the author is wonderfully anxious to prove, that the Lenapes were only vanquished through treachery, and being persuaded to bury the war hatchet and become women, i. e. no longer warriors. This is, however, of very little consequence; and seems to be insisted on chiefly because the Mengwes or Iroquois were the allies of the Dutch, and afterwards of the English.

The Indian traditions of the arrival of the Europeans, are not inferior in whiteness to Mr. Knickerbocker's enlarged version; and their complaints against the *Yenkees*, (a corruption of *English*, whence probably the nickname of *Yankees*), are as complacently recited as the most jaundiced misanthrope could desire. But our business is rather with their customs and manners than with their history; and passing to these consider-

we shall merely add to the former, that all the remnants of the once potent Lenapes, or Delawares, are now a few insignificant stragglers in Upper Canada, in Ohio, and on the Wabash, in the Indiana territory.

Among the general characteristics of the Indians, we are told, "they are ingenious in making satirical observations, which though they create laughter, do not, or but seldom give offence. For instance, seeing a bad hunter going out into the woods with his gun, they will ask him if he is going out for meat? or say to one another: 'now we shall have meat, for such a one is gone a hunting' (not believing any such thing). If they see a coward joining a war party, they will ask him ironically at what time he intends to come back again? (knowing that he will return before he has met the enemy,) or they will say to one another: 'will he return this way with his scalps.'

"Genuine wit, which one would hardly expect to find in a savage people, is not unfrequent among them. I have heard them, for instance, compare the English and American nations to a pair of scissors, an instrument composed of two sharpened edged knives exactly alike, working against each other for the same purpose, that of cutting. By the construction of this instrument, they said, it would appear as if in shutting, these two sharp knives would strike together and destroy each other's edges; but no such thing: they only cut *what comes between them*. And thus the English and Americans do when they go to war against one another. It is not each other they want to destroy, but us, poor Indians, that are between them. By this means they get our land; and, when that is obtained, the scissors are closed again, and laid by for further use."

"They have a strong innate sense of justice, which will lead them sometimes to acts which some men will call heroic, others romantic, and not a few, perhaps, will designate by the epithet *barbarous*; a vague indefinite word, which if it means any thing, might, perhaps, be best explained by *something not like ourselves*. However that may be, this feeling certainly exists among the Indians, and as I cannot describe it better than by its effects, I shall content myself with relating on this subject a characteristic anecdote which happened in the year 1793, at an Indian village called *La Chine*, situated nine miles above Montreal, and was told me in the same year by Mr. La Ramée, a French Canadian inhabitant of that place, whom I believe to be a person of strict veracity. I was then on my return from Detroit, in company with General Lincoln and several other gentlemen, who were present at the relation, and gave it their full belief. I thought it then so interesting, that I inserted it in my journal, from which I now extract it.

"There were in the said village of *La Chine*, two remarkable Indians, the one for his stature, being six feet four inches in height, and the other for his strength and activity. These two meeting together one day in the street (a third being present,) the former in a high tone made use of some insulting lan-

guage to the other, which he could not well put up with; he called him a coward, said he was his inferior in every respect, and so provoked his anger, that unable any longer to contain himself, the latter instantly replied: 'You have grossly insulted me; but I will prevent you from doing the like again!' and at the same moment stabbed him through the body with his knife, so that he dropped down dead by his side. The alarm being immediately spread through the village, a crowd of Indians assembled, and the murderer having seated himself on the ground by the side of the dead body, coolly awaited his fate, which he could not expect to be any other than immediate death, particularly as the cry of the people was 'Kill him! Kill him!' But although he placed his body and head in a proper posture to receive the stroke of the tomahawk, no one attempted to lay hands on him; but after removing the dead body from where it lay, they left him alone. Not meeting here with his expected fate, he rose from this place for a more public part of the village, and there lay down on the ground in the hope of being the sooner despatched; but the spectators, after viewing him, all retired again. Sensible that his life was justly forfeited, and anxious to be relieved from a state of suspense, he took the resolution to go to the mother of the deceased, an aged widow, whom he addressed in these words: 'Woman, I have killed thy son; he had insulted me, it is true; but still he was thine, and his life was valuable to thee. I, therefore, now surrender myself up to thy will. Direct as thou wilt have it, and relieve me speedily from misery.' To which the woman answered: 'Thou hast, indeed, killed my son who was dear to me, and the only supporter I had in my old age. One life is already lost, and to take thine on that account, cannot be of any service to me, nor better my situation. Thou hast, however, a son, whom if thou wilt give me in the place of my son whom thou hast slain, all shall be wiped away.' The murderer then replied: 'Mother, my son is yet but a child, ten years old, and can be of no service to thee, but rather a trouble and charge; but here am I, truly capable of supporting and maintaining thee: if thou wilt receive me as thy son, nothing shall be wanting on my part to make thee comfortable while thou livest.' The woman approving of the proposal, forthwith adopted him as her son, and took the whole family to her house."

"The chiefs are very careful in preserving for their own information, and that of future generations, all important deliberations and treaties made at any time between them and other nations. Thus, between the years 1770 and 1780, they could relate very minutely, what had passed between William Penn and their forefathers, at their first meeting and afterwards, and also the transactions which took place with the governors who succeeded him. For the purpose of refreshing their own memories, and of instructing one or more of their most capable and promising young men in these matters, they assemble once or twice a year. On these occasions they always meet at a chosen spot in the

woods, at a small distance from the town, where a fire is kindled, and at the proper time provisions are brought out to them: there, on a large piece of bark or on a blanket, all the documents are laid out in such order, that they can at once distinguish each particular speech, the same as we know the principal contents of an instrument of writing by the endorsement on it. If any paper or parchment writings are connected with the belts, or strings of wampum, they apply to some trusty white man (if such can be had,) to read the contents to them. Their speaker then, who is always chosen from among those who are endowed with superior talents, and has already been trained up to the business, rises, and in an audible voice delivers, with the gravity that the subject requires, the contents, sentence after sentence, until he has finished the whole on one subject. On the manner in which the belts or strings of wampum are handled by the speaker, much depends; the *turning* of the belt which takes place when he has finished one half of his speech, is a material point, though this is not common in all speeches with belts; but when it is the case, and is done properly, it may be as well known by it how far the speaker has advanced in his speech, as with us on taking a glance at the pages of a book or pamphlet while reading; and a good speaker will be able to point out the exact place on a belt which is to answer to each particular sentence, the same as we can point out a passage in a book. Belts and strings, when done with by the speaker, are again handed to the chief, who puts them up carefully in the speech bag or pouch."

(To be continued.)

#### HISTORICAL SKETCHES.

##### The Angles.\*

The Saxons having obtained a firm footing in England, adventurers of the Angles in Sleswick soon began to infest the eastern coast. Matthew of Westminster fixes their first appearance about the year 527, when they arrived in East Anglia, Mercia, and Essex, and fought many battles with the natives, while Cerdic the Saxon and his family were contending with Arthur in other quarters. The little kingdom of Essex was founded by them about the year 530, and though inconceivable at first, gradually stretched itself into Middlesex, and obtained the command of London, even then a flourishing town, and destined to become the capital of all the Jute, Saxon, and Angli kingdoms.

The Britons were still bravely fighting their invaders, and still masters of all the island from the Avon to the Cornish promontory on the west, and to the Firth of Forth on the north, when in 547, Ida, with his twelve sons, and forty vessels full of Angli warriors, headed a formidable enterprise which landed on the coast above the Humber. The country from that river to the Clyde was divided into many states, under independent sovereigns, of whom the names of Gall,

\* Abridged from the *History of the Anglo-Saxons*, by Sharon Turner.

† Ekenw is the first king died in 547.

Hyvelled, and Ysgwneil, kings of Deifyr and ryncich, and Urien, king of Reged, and thers nearer the Clyde, have descended to us. Some of the monarchs were also bards; or instance, Aneurin, the chief of Gododin, nother chief called Mynyddawr governed district near the friths at Eidin, which has been conjectured to be the origin of Edinburgh, or the burgh of Edin. The Kymry, most noted Britons, retiring from Saxon conquest, settled in the valley of the Clyde, or Strat Clyde, and there formed a kingdom which was ultimately destroyed by the Dalriads and Picts in the 10th century. *Dumortan* was probably its capital, *Alclyde*, or the heights of Clyde.

The resistance offered to Ida was brave and vigorous; and Talsien the British bard, as portrayed the battles of his countrymen a language very nearly resembling that of basian. The following is a specimen:

Neither the fields nor the woods gave safety to the foe

When the shout of the Britons came,  
like a wave raging against the shore—  
saw the brave warriors in array;  
and after the morning how mangled!  
was the tumult of the perishing hosts;  
The blood springing forward and moistening the ground.

admired the brave chief of Reged;  
saw his reddened brow,  
When he rushed on his enemies at Llecgwen  
Calystan:  
like the bird of rage was his sword on their bucklers;  
it was wielded with deadly fate.

Llywarch Hen, another British bard of the 6th century, also celebrates the valiant and unfortunate King Urien, with rule but yet touching sympathy, that we cannot resist the temptation to extract a part of his rambling poem.

an eagle to his foe in his thrust, brave as generous,  
in the angry warfare, certain of victory  
Was Urien, ardent in his grasp.

bear by my side, a head;  
the head of Urien!  
the courteous leader of his army;  
but on his white bosom the raven is feeding.  
It was a shield to his country;  
his course was a wheel of battle.  
letter to me would be his life than his mead:  
It was a city to old age;  
the head, the noblest pillar of Britain.

bear a head that supported me!  
there any known but he welcomed?  
Voe to my hand!  
Where is he that feasted me?

bear a head from the mountain,  
the lips foaming with blood.  
Voe to Reged from this day.

ly arm has not shrunk  
out my breast is greatly troubled.  
ly heart! is it not broken?  
the head I bear supported me.

The slender white body will be interred to day  
under earth and stones.

He was treacherously slain by an emissary of another native king, Morgant, when besieging successor of Ida in Moly Island.

Woe to my hand!

The father of Owen is slain.

Euryddyl will be joyless to night  
Since the leader of armies is no more,  
In Aber Lleu Urien fell.

Silent is the gale

But long will thou be heard.  
Scarcely any deserve praise,  
Since Urien is no more.

Many a dog for the hunt and ethereal hawk  
Have been trained on this floor,  
Before Eriilon was shaken into ruins.

This hearth! no shout of heroes now adheres  
to it:

More usual on its floor  
Was the mead; and the inebriated warriors.

This hearth! will not settle now cover it?  
While its defender lived,  
More frequent was the tread of the petitioner.

The green sod will cover it now;  
But when Owen and Elphin lived  
Its cauldron seethed the prey.

This hearth! the mouldy fungus will hide it now;  
More usual about its meals  
Was the striking of the sword of the fierce warrior.

Thorns will now cover it;  
More usual once was the mixture  
Of Owen's friends in social harmony.

Ants will soon overrun it;  
More frequent were the bright torches  
And honest festivities.

Swine will henceforward dig the ground,  
Where once the gladness of heroes  
And the horn of the banquet went round:  
It was the solace of the army and the path of melody.

This elegy, at once a picture of the age and a pathetic tribute to a hero who adorned it, has (though not very errantly) diverted us from the thread of our story. The northern Britons prolonged their resistance, and made it more bloody than in any other part of the island. Ida was slain (it is fairly conjectured) in 559, and a multitude of his fellow warriors and successors perished by the sword in battle. Ella, however, one of the latter, while Bernicia was constituted a nation by Adda, son of Ida, also succeeded in establishing a kingdom, called *Deira*, between the Tweed and Humber; and thus in the year 560, there existed in Britain one Jute, three Saxon, and three Angle kingdoms, namely in Kent, Sussex, Essex, Wessex, East Anglia, Bernicia, and Deira. About twenty-six years afterwards another Angle kingdom, divided into north and south by the Trent, was added in Mercia, which became in time only second to that of the West Saxons, who at last subdued it. Among the invaders of Britain the Frisii are frequently mentioned, and it seems as if endless bands of depredators, from every coast of Scandinavia and the Baltic, poured incessantly into the devoted country, the subjugation of which, notwithstanding the courage of its people, was rendered comparatively easy by the dissensions and wars among its native princes. The division and occupation of the country towards the end of the sixth century, may be stated from Bede, thus

The Jutes possessed Kent, the Isle of

Wight, and that part of the coast of Hampshire which fronts it.

The Saxons were distinguished, from their situation, into South Saxons, who peopled Sussex:—East Saxons, in Essex, Middlesex, and the south of Hertfordshire:—and West Saxons, in Surrey, Hampshire (where the Jutes were not), Berks, Wilts, Dorset, Somerset, Devon, and so much of Cornwall as the Britons could not maintain.

The Angles were divided into—East Angles, in Norfolk, Suffolk, Cambridge, the Isle of Ely (it is thought), and part of Bedfordshire:—Middle Angles, in Leicestershire, which appertained to Mercia:—the Mercians separated, as we have noticed, by the Trent, into South Mercians, in the counties of Lincoln, Northampton, Rutland, Huntingdon, the north of Bedfordshire and Hertfordshire, Bucks, Oxfordshire, Gloucestershire, Warwickshire, Worcestershire, Herefordshire, Staffordshire, Shropshire; and the North Mercians, in the counties of Chester, Derby, and Nottingham:—the Northumbrians, who were the Deiri, in Lancaster, York, Westmoreland, Cumberland, Durham; and the Bernicians, in Northumberland and the south of Scotland, between the Tweed and the Firth of Forth.

These formed the famous Anglo-Saxon octarchy, near the formation of which having now arrived, we shall take the opportunity of pausing on our labours till another week.

#### THE PERCY ANECDOTES.

The eleventh part of these neat little compilations has appeared: it is devoted to subjects of humour, and has, appropriately enough, a portrait of George Colman for its frontispiece. The selection is amusing, as may be surmised from the following examples, which we have extracted as the least familiar to us, without vouching for their being quite new to the readers of jest-books and *anais*.

*Archbishop Mountain*.—In the reign of George II. the see of York falling vacant, his majesty being at a loss for a fit person to appoint to the exalted situation, asked the opinion of the Rev. Dr. Mountain, who had raised himself by his remarkably facetious temper from being the son of a beggar to the see of Durham. The Doctor wittily replied, "Hadst thou faith as a grain of mustard seed, thou wouldst say to this Mountain (at the same time laying his hand on his breast), be removed, and be cast into the sea (see)." His Majesty laughed heartily, and forthwith conferred the preferment on the facetious doctor.

*Fontenelle*.—The Abbé Reignier, secretary of the French Academy, one day made a collection in his hat of one pistole from every member to defray the current expenses. The abbé did not observe that the president, who was a very avaricious man, had put his pistole into the hat, and presented it to him a second time. "I have given already," said he. "I believe it," said the abbé, "but I did not see it." "And I," rejoined Fontenelle, who was at his side, "saw it, but did not believe it."

*The Plagiarist*.—A young author obtained

permission from the celebrated satirist Piron, to read to him a tragedy which was on the eve of being brought out. At every verse which was pillaged, Piron took off his hat, and bowed; and so frequently had he occasion to do this, that the author surprised, asked what he meant? "Oh," replied Piron, "it is only a habit I have got of saluting my acquaintance."

*A strange acquaintance.*—Lord Kaimies used to relate a story of a man who claimed the honour of his acquaintance on rather singular grounds. His lordship, when one of the justiciary Judges, returning from the north circuit to Perth, happened one night to sleep at Dunkeld. The next morning, walking towards the ferry, but apprehending he had missed his way, he asked a man whom he met to conduct him. The other answered, with much cordiality, "That I will do with all my heart, my lord. Does not your lordship remember me? My name's John —, I have had the honour to be before your lordship for stealing sheep!" "Oh, John! I remember you well; and how is your wife? She had the honour to be before me too, for receiving them, knowing them to be stolen." "At your lordship's service. We were very lucky; we got off for want of evidence; and I am still going on in the butcher trade." "Then," replied his lordship, "we may have the honour of meeting again."

*A severe lesson.*—M. de la Place relates the following amusing anecdote of the late Comte d'Emmont, as delivered to him by the count himself. "I had not been," said he, "more than six months in the Mousquetaires, before enchanted at being released from the trammels of the school, which had for a long time annoyed me exceedingly, I plunged blindly into the vortex of pleasures, in which I saw my young companions enjoying themselves."

"One night, after having dined sumptuously and joyfully with several of my friends, we proceeded to the opera, which we found exceedingly crowded, and where, after having pushed and squeezed ourselves in as well as we could, we obtained standing room in the centre of the pit. There forced to stop, I should, as my companions did, have waited with great patience, if I had not unluckily found directly before me an old gentleman in a brigandier's wig, whose amplitude formed before my eyes a species of screen, which totally concealed from me any thing that was going forward on the stage, and especially prevented me from seeing a young dancing girl, in whom I felt a great interest."

"After having begged and prayed the gentleman, whom I was already incommoding exceedingly, to allow me a glimpse of the stage, by a certain change of position, which he drily answered, was impossible; irritated by his coolness and my own awkward situation, at which, to crown my misery, my neighbours, and especially my young companions, were heartily laughing, I took from my pocket a pair of scissors, with which I set to work, not only to prune away the superfluous branches and foliage, if I may use the expression, which annoyed me, but also the thick clubs which served to ornament its tail."

"The bursts of laughter which my revenge excited, having awakened my gentleman from the species of apathy in which he had till then seemed buried, he perceived the state to which I had reduced his perriwig. 'My young friend,' said he, turning round as well as he could, 'I expect you will not leave the house without me.' This little civility, continued the Comte d'Emmont, and especially a certain glance of the eye by which it was accompanied, by making me sensible of the whole extent of my folly, moderated, I confess, considerably the pleasure I had felt in committing it! however, the wine was poured out, and I felt that I was compelled to drink it. At the conclusion of the opera, my gentleman, without speaking, gave me a sign to follow him."

"After having crossed, not without difficulty, the square of the Palais Royal, and passed through the Rue St. Thomas du Louvre, we came under the arcade, where stopping suddenly, 'M. Le Comte d'Emmont,' said he, 'for I have the honour of being acquainted with you, you are young; and I owe you a lesson, for which your late father, whom I knew better than I do you, would perhaps have thanked me: when a man gives a public insult, and especially to an old soldier, he ought at least to know how to fight. Let us see,' continued he, drawing his sword, 'how you will acquit yourself.' Enraged and humiliated by a proposition which seemed to me to border on contempt, I rushed on him with all the impetuosity of which my youth and my indignation rendered me capable; but my gentleman, without being in the least discomposed, as steady as a rock, contented himself with parrying my thrusts by the most insolent parades in the world, and at last made no other return to my attacks than by a quip, which made my sword fly out of my hand to the distance of five or six paces. 'Pick up your sword, Monsieur le Comte,' said he, with the same coolness, 'it is not like an opera-dancer, but like a brave cavalier, with a firm foot and a steady eye, that a man of your name ought to fight; and this is what I now invite you to do.'"

"'You are most cruelly in the right,' answered I, endeavouring to stifle the feelings which were agitating me, 'and I hope soon to prove myself worthy of your esteem.' Fixedly determined rather to perish, than to expose myself to fresh sarcasms from this singular enemy, I placed myself opposite to him, and attacked him with a coolness equal to that which he displayed in defending himself. 'Very well, very well, indeed,' exclaimed, from time to time, this devil in human form, until the moment when, having run me through the sword arm, he said, 'There; that's enough for the present.' So saying, placing me against the wall, and telling me to wait till he came back, he ran to the Palais Royal, brought a coach, bound up my wound with a handkerchief, and telling the coachman to drive up to the Mousquetaires de la Rue de Beaune, he delivered me into the hands of the porter, and took his leave."

"After a confinement of more than six

weeks, which were required to cure my wound, I had not rejoined the world more than a week, when one evening going into the Café de la Regence to look for some of my companions, I recognised my gentleman, who quitted his seat, placed his finger on his mouth, and exclaiming 'Chut!' rose, came towards me, and made me a signal to follow him. Arrived under the same archway, 'You have amused yourself a little at my expense, my dear count,' said he, 'in recounting our adventure, and I have too great a regard for you, not to contribute all in my power to render it still more agreeable, by furnishing a continuation, which you may add to the story when you next relate it. Come, draw your sword.'"

"This second lesson, which was very similar to the first, was followed some months after by a third. This executioner, if I may so call him, at last became so terrible to me, that I hardly ever ventured into public without feeling a sort of shudder, lest I should encounter him, for I had forgot to mention, that the last lesson which he had condescended to give me was on the eve of the carnival, which he had made me pass in the most meagre and laudably manner possible in my bed."

"Judge, therefore, of my joy, as well as gratitude, when a waiter from the Café de la Regence arrived one morning at my lodgings, and said, 'You will pardon me, Monsieur le Comte, but I thought you would not be sorry to hear that Monsieur 'Chut' died last night, and my mistress hopes we shall soon see you again at our house.'"

*Renewing a promise.*—A late noble lord, who was sparing of money and lavish of promises, had given his note to a gentleman for a considerable sum he owed him; it had been long due, and the peer never failed when he met him to make a handsome apology. Tired with promises that were never intended to be realized, the creditor one day, in answer to a new promise, said he had no doubt of his lordship's honour, and that he would pay it at the time he then fixed; but, added he, "in the mean time, as this note is almost worn out, I should be glad if your lordship would take it up, and give me one upon parchment." The peer being a man of wit, could not stand the severity of the rebuke, but paid the money almost immediately.

*Criticisms.*—A journeyman hatter, a companion of Dr. Franklin, on commencing business for himself, was anxious to get a handsome signboard, with a proper inscription. This he composed himself, as follows:

"John Thompson, hatter, makes and sells hats for ready money;" with the figure of a hat subjoined. But he thought he would submit it to his friends for their amendments. The first he showed it to, thought the word *hatter* tautologous, because followed by the words, "makes hats," which showed he was a hatter. It was struck out. The next observed, that the word "makes" might as well be omitted, because his customers would not care who made the hats; if good, and to their mind, they would buy, by whomsoever made. He struck that out also. A third said, he thought the words "for ready

money" were useless, as it was not the custom of the place to sell on credit; every one who purchased, expected to pay. These two were parted with, and the inscription then stood, "John Thompson sells hats." "Sells hats!" says his next friend; "why, who expects you to give them away? What, then, is the use of the word?" It was struck out, and *hats* was all that remained attached to the name of John Thompson. Even this inscription, brief as it was, was reduced ultimately to "John Thompson," with the figure of a hat substituted.

*Bacchanalians*.—A publican blowing the froth from a pot of porter which he was bringing to a customer, the gentleman struck him. Boniface eagerly asked why he struck him? "Why," replied the gentleman, "I only returned blow for blow."

At the breaking up of a tavern dinner party, two of the company fell down stairs, the one tumbling to the first landing place, the other rolling to the bottom. It was observed that the first seemed *dead drunk*. "Yes," said a wag, "but he's not so far gone as the gentleman below."

*"Whereas"*.—A barrister observing the Lord Chancellor, whom he wished to address, very much engaged with the Gazette, said, "I beg your lordship's pardon; I see you are busy with your harvest."

*Learned librarian*.—M. Bantru, a distinguished member of the French Academy in the seventeenth century, travelling in Spain, was presented to the king, Philip III. who asked him if he had seen the Escorial? Bantru answered in the affirmative. "Well, and what do you think of the library?" "I think, sir, that you should make your librarian Minister of Finances," answered Bantru. "Why," asked the king. "Because he has never touched any thing entrusted to his care."

*An expensive job*.—A gentleman passing a church which while under repair, observed to one of the workmen, that he thought it would be an expensive job. "Why, yes," replied he; "but in my opinion we shall accomplish what our reverend divine has endeavoured to do, for the last thirty years, in vain." "What is that?" said the gentleman. "Why, bring all the parish to repentance."

KNICKERBOCKER'S HISTORY OF NEW YORK.

(Continued from our last.)

We need not follow the train by which we are conducted through all the details of the original settlement of the Dutch in the New World—their wars—their institutions—their divisions—the portraits of their great men—their foundation of New York—their final overthrow by the English. We shall merely present two passages, which we have chosen from these parts as fair specimens of the whole. The first is from the long and ludicrous argument (of which we gave a portion in our last Number) on the right of taking possession of discovered countries, and conquering and (if need be) exterminating its inhabitants.

But hold; before I proceed another step, I must pause to take breath and recover from the excessive fatigue I have undergone in preparing to begin this most accurate of histories. And in this I do but imitate the example of a renowned Dutch tumbler of antiquity, who took a start of three miles for the purpose of jumping over a hill, but having run himself out of breath by the time he reached the foot, sat himself quietly down for a few moments to blow, and then walked over it at his leisure.

My great grandfather, by the mother's side, Hermanus van Clattercop, when employed to build the large stone church at Rotterdam, which stands about three hundred yards to your left, after you turn off from the Boomkies, and which is so conveniently constructed, that all the zealous Christians of Rotterdam prefer sleeping through a sermon there to any church in the city,—my great grandfather, I say, when employed to build that famous church, did in the first place send to Delft for a box of long pipes; then having purchased a new spitting box and a hundred weight of the best Virginia, he sat himself down, and did nothing for the space of three months but smoke most laboriously. Then did he spend full three months more in trudging on foot, and voyaging in trekschuit, from Rotterdam to Amsterdam,—to Delft—to Haarlem—to Leyden—to the Hague, knocking his head and breaking his pipe against every church in his road. Then did he advance gradually nearer and nearer to Rotterdam, until he came in full sight of the identical spot whereon the church was to be built. Then did he spend three months longer in walking round it and round it, contemplating it, first from one point of view, and then from another—now would he be paddled by it on the canal—now would he peep at it through a telescope from the other side of the Meuse—and now would he take a bird's eye glance at it from the top of one of those gigantic wind-mills which protect the gates of the city. The good folks of the place were on the tiptoe of expectation and impatience—notwithstanding all the turmoil of my great grandfather, not a symptom of the church was yet to be seen; they even began to fear it would never be brought into the world, but that its great projector would lie down and die in labour of the mighty plan he had conceived. At length, having occupied twelve good months in puffing and paddling, and talking and walking—having travelled over all Holland, and even taken a peep into France and Germany—having smoked five hundred and ninety-nine pipes, and three hundred weight of the best Virginia tobacco—my great grandfather gathered together all that knowing and industrious class of citizens who prefer attending to any body's business sooner than their own; and having pulled off his coat and five pair of breeches, he advanced sturdily up, and laid the corner stone of the church, in the presence of the whole multitude—just at the commencement of the thirteenth month.

In a similar manner, and with the example of my worthy ancestor full before my

eyes, have I proceeded in writing this most authentic history. The honest Rotterdamers no doubt thought my great grandfather was doing nothing at all to the purpose, while he was making such a world of prefatory bustle, about the building of his church—and many of the ingenious inhabitants of this fair city will unquestionably suppose that all the preliminary chapters, with the discovery, population, and final settlement of America, were totally irrelevant and superfluous—and that the main business, the history of New York, is not a jot more advanced than if I had never taken up my pen. Never were wise people more mistaken in their conjectures: in consequence of going to work slowly and deliberately, the church came out of my grandfather's hands one of the most sumptuous, goodly, and glorious edifices in the known world—excepting that, like our magnificent capitol at Washington, it was begun on so grand a scale that the good folks could not afford to finish more than the wing of it. So likewise, I trust, if ever I am enabled to finish this work on the plan I have commenced (of which, in simple truth, I sometimes have my doubts), it will be found that I have pursued the latest rules of my art, as exemplified in the writings of all the great American historians, and wrought a very large history out of a small subject—which, now a-days, is considered one of the great triumphs of historic skill. To proceed, then, with the thread of my story.

In the ever memorable year of our Lord, 1609, on a Saturday morning, the five and twentieth day of March, old style, did that "worthy and irrevererable discoverer (as he has justly been called,) Master Henry Hudson," set sail from Holland in a stout vessel called the Half Moon, being employed by the Dutch East India Company to seek a north-west passage to China.

Henry (or, as the Dutch historians call him, Hendrick) Hudson was a sea-faring man of renown, who had learned to smoke tobacco under Sir Walter Raleigh, and is said to have been the first to introduce it into Holland, which gained him much popularity in that country, and caused him to find great favour in the eyes of their High Mightinesses, the lords states general, and also of the honourable West India Company. He was a short, square, brawny old gentleman, with a double chin, a mustiff mouth, and a broad copper nose, which was supposed in those days to have acquired its fiery hue from the constant neighbourhood of his tobacco-pipe.

He wore a true Andrea Ferrara, tucked in a leather belt, and a commodore's cocked hat on one side of his head. He was remarkable for always jerking up his breeches when he gave out his orders, and his voice sounded not unlike the brattling of a tin trumpet—owing to the number of hard northwesterly winds which he had swallowed in the course of his sea-faring.

Such was Hendrick Hudson, of whom we have heard so much, and know so little: and I have been thus particular in his description for the benefit of modern painters and

statuaries, that they may represent him as he was; and not, as curling to their common custom with modern heroes, make him look like Cæsar, or Marcus Aurelius, or the Apollo of Belvidere.

As chief mate and favourite companion, the commodore chose master Robert Juet, of Limehouse, in England. By some his name has been spelled *Cherck*, and ascribed to the circumstance of his having been the first man that ever chewed tobacco; but this I believe to be a mere flippancy; more especially as certain of his progeny are living at this day, who write their names Juet. He was an old comrade and early school-mate of the great Had-on, with whom he had often played truant and sailed chip boats in a neighbouring pond, when they were little boys—from whence it is said the commodore first derived his bias towards a seafaring life. Certain it is, that the old people about Limehouse declared Robert Juet to be an unlucky urchin, prone to mischief, that would one day or other come to the gallows.

He grew up, as boys of that kind often grow up, a rambling, heedless varlet, tossed about in all quarters of the world—meeting with more perils and wonders than did Sindbad the Sailor, without growing a whit more wise, prudent, or ill-natured. Under every misfortune, he comforted himself with a quid of tobacco, and the truly philosophic maxim, that "it will be all the same thing a hundred years hence." He was skilled in the art of carrying anchors and true lover's knots on the bulk heads and quarter railings, and was considered a great wit on board ship, in consequence of his playing pranks on every body around, and now and then even making a wry face at old Hendrick, when his back was turned.

To this universal genius we are indebted for many particulars concerning this voyage; of which he wrote a history at the request of the commodore, who had an unrequitable aversion to writing himself, from having received so many floggings about it when at school. To supply the deficiencies of master Juet's journal, which is written with true log-book brevity, I have availed myself of divers family traditions, handed down from my great great grandfather, who accompanied the expedition in the capacity of cabin-boy.

From all that I can learn, few incidents worthy of remark happened in the voyage, and it mortifies me exceedingly that I have to admit so noted an expedition into my work, without making any more of it.

By a Cockney Grey Beard.

#### CHAPTER VIII.

Old Palace at Westminster.

How it has happened no one has yet been kind enough to tell, but certain it is, the art of painting has been the last scientific discovery in every civilized society. Architecture, sculpture, poetry, music, all have

attained honours for their professors, in ages when the art of painting was yet in a state of hideous deformity. When we behold the edifices of the illustrious dead, recumbent on their tombs, we are charmed with the sculptor's skill, and readily conceive the living forms of the beings, their mortal prototypes. Yet on casting but a glance upon a painted portrait of the same prince or knight, or lady fair, we discover enough to prove the imbecility of the attempt, and turn from the subject with disgust.

Had but our painters of old been skilled in depicting with the pencil, as faithfully as our poets with the pen, what an intellectual treat would it have been to us antiquaries to have opened an old copy of the *Canterbury Tales* and other "ryght merye" descriptions of the age of our great Edwards; and have seen the graphic illustrations as characteristically true,—touching with a feeling as congenial, as Wilkie's is to Scott.\*

What magnificent worthies does imagination paint some of our pious monks—what wits and humourists the holy friars—what grand specimens of humanity in our lady abbesses—God preserve their memories, and their three lovely novices and nuns. These observations apply to the deficiencies in the higher reach of painting, that records the wondrous image of man. There is another department, yet less meritorious, but still later in its approximation to truth—namely the art topographic; and this is the more surprising, as half its perfection depends on "line and rule."

How often have I lamented that we had no skillful topographic pencil, in the ingenious hand of some such wight as Sandily,\*\* Rooker,† or Heorne,; before the memorable 1666. Cold indeed must be that breast to

\* To Scott and Burn's too, vide the "Reading of the Will," and Duncan Gray."

\*\* The late venerable Paul Sandily, not unaptly designated the father of Water Colour Painting, was the first English artist who made correct topographical views of the old towns, castles, and other ancient buildings, with pictorial arrangement. The ingenious conscientious Hollar, has left us some interesting etchings of parts of the old metropolis before the Fire of London. Particularly one, invaluable in its way, of Old Palace Yard. He however did not sufficiently understand linear perspective; hence he dared not attempt those bold and more striking positions which Sandily chose for his point of view.

† Rooker was another, whose topographic knowledge has furnished the portfolio of the learned collector with many scenes of the same interesting class. His graver, no less skillful, will perpetuate the magnificence of Oxford long after the restless spirit of modern improvement shall have trampled many more of the labours of the enlightened monks in the dust.

‡ Heorne, the last of this ingenious triumvirate, will be remembered as long as *veritas* has a charm. The elegance of his chaste pencil has raised the fame of England for this species of drawing. John Byrne of worthy memory, his able conditor, has by the assistance of his graver, contributed to spread a general love for topography, and the two together have produced a work of British antiquity, that maintains its celebrity throughout Europe.

feeling, and indifferent to taste that eye, that would not delight in seeing some of the magnificent buildings described so patriotically by Evelyn, as food for the devouring element, rescued from oblivion, as it were, by the magic of art.

What an interesting display of palaces, halls, seats, and other Gothic structures, must have been visible both from the Thames and along the Strand, city-ways between the Old Palace of Westminster, and the Tower of London.

I have an ingenious friend who is deeply skilled in the Gothic of every character, from the excellent period of Henry III. to its decline in the time of Henry VII, VIII; and is truly *versé* in what is aptly termed Domestic Gothic.

He is an adept with the pencil, having studied linear perspective under Kirby, and correctness of delineation under Paul Sandily, who reckoned him the best amateur disciple he had taken in hand. Indeed I know but of few professors who sketch buildings with superior picturesqueness, or character and expression—if I may be allowed the term, touching inanimate objects. This amateur of OLD TOWN SCENERY, has a portfolio of the most amusing sketches, which represent various imaginary peeps at London and Westminster from nominal spots, in which he has introduced the old streets, with occasional religious buildings, mansions, inns and hospitals, conduits, fountains, and crosses. And these compositions he designates his GRAPHIC DREAMS.

It is not to be conceived how admirably he has planned his buildings, nor with what tasteful case he has grouped the figures, in the costume of the times; and how naturally he has employed them! There a portly friar is purchasing at a butcher's shambles, "provision for the convent." Whilst at a neighbouring house, an idle mob is assembled to see a "white baker" carted from his door for making adulterated bread, with a label on his breast, proclaiming him a cheat.—And hard by, in this active age of police, a jolly group of inquest and ale conners, in their magisterial gowns and liveries, sit beneath the porch of the Talbot, joyously drinking with the handsome ale-wife, on fusing "all things right."

These scenes have so much the appearance of identity—of having actually been, (for the character of antiquity is so faithfully preserved, and the circumstances and minutiae of explosives are so entirely fitting,) that those who may perchance see them, when thee and I, gentle reader, are become ancients in our turn—some three centuries hence or so, may contemplate them as specimens of Old London six or seven hundred years ago. For to strengthen the ingenious illusion, he has written on each, what *rien* it represents, and the year in which it was taken, and has added the fictitious name of an artist—"William Lambardie, painter-stayer."

Among others is "A Scheme of the Remaynes of the Palace of Edwarde the Confessor, as y<sup>e</sup> appeared in the yere of grace 1400—Planned from the wyndowe of the Reece Taverne, in New Palace Yard, by me Wylliam Lambardie Paynter Stayer.

"Also, a plane of the maye-pole § in the Straynde looking yesterlye onwardes to Saynte Clements church—neare to wherstood Saynte Mary le Straynde, taken from the highe waye y<sup>e</sup> leady to the Lowden Citie, in my foure score and fyve yre W. L.

In this the deep roots of the road in the Strand are strongly identified, and the covered light waggons, the coaches of that period, are naturally introduced; and one in particular, with several people at the wheels helping it out of a quagmire—traits that give the piece an air of originality, that captivates.

Now this mode of designing, to use the thought of Master Wylliam Lambarde, is such a pretty picturesque way of draughting, that it strikes me our professional topographic painters might take a useful hint from the ingenious practice, and give the lovers of art some delightful pictures of imagination, taken from *thems* nearer home. For who could behold unmoved the magical reveries of Turner<sup>¶</sup> in his "Founding of Carthage," and other works of his poetic pencil; or the mighty Babylon, from the inventive mind of Martin; or the awful Jerusalem of Hoffman? It is in these exclusive flights that the painter exhibits the lofty powers of his genius, and raises our wonder at the creative capacities of his art.

Perhaps it may amuse some, who love to read of customs and social habits remote—of the banquettings and revellings of the Plantagenets and the Tudors, of times that have furnished tales of delight, first heard in the nursery, indulged in the romantic ardor of youth, and remembered in manhood—such it may amuse to ramble with me, over many an ancient site, from the Sanctuary to London's white Tower.

First then, commencing at the venerable palace of our ancient kings, let me open my budget of research, in Old Palace Yard. What a scene for a Canaletti, did this afford, even so late as the time of Charles I. that princely patron of every art!

§ The May-pole near the site of Gibb's over-ornamented the new church, St. Mary le Strand, stood there as late as the reign of Queen Anne. It was one of the tallest in the kingdom. Formerly almost every town and village had its May-pole, though now but few remain. One is yet standing near Workop manor, Nottinghamshire; another is in a village near Henley. In the print of Windsor, by Hollar, a May-pole is represented at the bottom of Peasecod-street. This print is in the folio edition of "Ashmole's Order of the Garter."

¶ The Founding of Carthage, by Turner, was exhibited a few years since at Somerset House: a picture which combined all the higher excellencies of the greatest masters of the old school, superadded to his own unrivalled genius.

¶ Martin. The lovers of painting may (we hear) expect another intellectual treat in the ensuing season of exhibition, in a magnificent design of the Feast of Balhazzar, with the supernatural hand-writing on the wall of his palace, by this artist.

• It is hoped that Hoffman has some grand subject on his easel. His Moonlight last season was beautifully poetic. Such works of imagi-

Opposite the Banqueting Hall of William Rufus, stood a square tower of vast height, in which hung that great bell that has, of late, alas! told a sorrowing people in deep and mournful note, the awful tidings of Death's having torn another and another branch from off the royal tree.

This tower stood before a row of antiquated dwellings, on a terrace, now occupied by modern three storied houses, mere strait walls, perforated with oblong apertures to admit the light.

The south side had the same character of comfortable antiquity, that looked hospitality. A dwarf wall united the north-west tower of the Exchequer to a grand and spacious gate, with carriage way and postern; forming together a complete quadrangle.

In the centre stood a Gothic conduit, highly enriched, which certain modern Vandals and Huns, to their eternal shame, wantonly destroyed, although *this* beautiful remnant of the taste of our forefathers stood not in the way. Be it further known, it was not a republican faction, nor the silent destroyer Time, that urged the spoliation—nor did an earthquake help to throw it down. It was a Board of Works that did the deed, in the beginning of that paroxysm of destructive phrenzy that still continueth; that pulleth down what it hath neither the wish nor wit to build up again—a phrenzy that would not be appeased, had it the indulgence of its froward will, whilst a remnant of ancient art remained.

The chapel of St. Stephen stood insulated in its pristine beauty: opposite which was the Rose Tavern, built in the reign of Edward IV. and removed to clear the site for Henry Vith's Chapel, that gorgeous specimen of the florid Gothic.

What feasts and joyous revelry prevailed in the Royal Palace of Westminster, when the stately courts were kept by the illustrious great, whose monuments yet remain in the neighbouring mausoleum of royalty. Imagination joins in the banquetting that caused the royal kitchen incessantly to smoke,—when the surpliced singing-men taught a synd of cooks to *sol fa*, and prepare the chorus that ushered in the social Christmas feast with the Brawn's head.

Then it was that good cheer was the Englishman's motto, and the feast was the beginning and the ending of every public event.

What would the hospitable progenitors of our kings and nobles have said, had it been prophesied that an age should arrive, when a peep into a royal larlet would scarcely discover enough for the spit to "furnish forth" a breakfast for the maids? of honor to Eng-

nation are honourable to the country, and creditable to the genius of the age.

† The great bell of St. Pauls was removed from the ancient bell tower in Palace Yard, and re-cast to place in that magnificent modern structure. It had tolled to the Judges in Westminster Hall from the time of Richard II. to the early part of the last century.

‡ The household allowance, doled out by the maniple for the breakfast of these sweet

laid's right noble maiden queen? When the Baronial Fire was silent as the grave, and the yawning fire-place cold and dark as the sepulchre. When the household of the descendants of the proud baron, looking famished as gaunt wolves, sat devouring the half-cooked scrap, grudgingly spared out of ill paid board wages. When, O degenerate age! the Genius of Hospitality was preparing to take her flight from the old island, after having mortgaged the land of plenty to the vile co-partnership of Discord, Politics, and Ill-humour!

## ORIGINAL CORRESPONDENCE.

A CONCISE VIEW OF THE INCONTINENCE OF THE CLERGY ANTERIOR TO THE REFORMATION.

(Continued.)

I shall now conclude this short and imperfect essay, with a succinct review of the various ecclesiastical officers at the period of the reformation. Although I shall be enabled to offer nothing new on the subject, yet from the following division of it into the respective heads of *abbot, prior, friars, hermits, monks, and nuns*, I trust I shall render it sufficiently interesting and clear to the reader; and *imprimis*, of our *holy father Abbot*. This is a Syriac term, signifying father, and originally, was applied to all monks, especially those who were venerable for their *years and sanctity*; they were afterwards considered as heads of houses. Among the inquiries which the visitors of Henry VIII. were appointed to make, were, whether the abbot was of good living and fame; whether he had the company of any *suspect* person, and what woman was most in his company; and what was his character in the neighbourhood\*. The abbot of Welbeck was described as one, who "vixit et vixit in fornicariæ amplexibus tenendo diversas mulieres."† The abbot of Fountains was thus described by the visitors; "Pleas it your mastershippe to understand, that the abbot of Fountains hath so greatly dilapidated his howse, wasted the woddys, notoriously *keeping* of . . . deffamed a toto populo," &c.‡ And the abbot of Langden Abbey, appears to have followed their example. The manner of catching his mistress is so amusing, that no apology is necessary for giving it at length in the words of the original:—"Whereat, I immediately descending fro my horse, I sent Bartlett, your servaunt, with all my servaunts, to circumspect the abbey, and surely to kepe all backe doors and starting holes, and I myself went alone to the abbots lodging, joyning upon the felides and wode, even like a cony clapper full of starting hollies, a good space, knocking at the abbot's dore, *neq* *vox* *neq* *sensus* *apparent*, maidens, was chimes of roast beef and flaggons of potent ale!

\* The following lines in MS. Harl. 913, f. 4, b. allude to the above.

When the abbot him is eath,  
Yat his monkes firm thei sleep,  
He taketh a maiden of the roue.

† MS. Ashmol. Mus. 1519. f. 28. b.

‡ MS. Cott. Cleop. E. iv. f. 114.

saving the abbot's little dogge, that within his dore fast lokkid, bayed and barkide. I found a short polax standyng heyde the dore, and with yt I dashed the abbot's dore in peissis, *ictu oculi*, and set one of my men to kepe the dore, and about howse I go with that polax in my hande, *no forte*, for the abbot is a dangerous desperate knave, and a hardy; but, for a conclusion, his \* \* \*, al's his gentlewoman, bestyrrede hyr stumpis towards hyr starting holies, and then Bartlett watchyng the pursuit, towke the tendre damoisell, and afir I hade exaymyned hir, I sent her to town, then to mayr to sett hir in the cage or prison for viij daies, and I brought holy father Abbot to come and heyr." § Notwithstanding the abbots appear to have been tinctured with this natural infirmity of humanity, they nevertheless, in their outward conduct behaved very differently; for when they went their visitations, they made statutes requiring ecclesiastics to shun the company of females, and not to keep them in their dwellings; and there were several also made against fornication ||. But quitting this head, we will next proceed to the prior. He was the next officer in dignity to the abbot, and of this personage I have little information to give; we are not however to suppose from my paucity of materials, that he was a whit better than the abbot. The following instance, is sufficient to satisfy us on this point. At Maiden Bradley, says Richard Layton, "is an holy father prior, and hath but six children, and but one daughter maried, yet of the goods of the monasterie trysting shortly to marry the rest. His sones be tall men wayting upon hym, and he, thank God, a none meddler with marrit women, but *all with madens the fierist coulede be gottyn*. The pope, considering his frailtie, gave hym lycens to kepe an \* \* \*, and hath good writyng, *sub plumbo*, to discharge his conscience." † † Friars. Chaucer's friar is a pleasant scoundrel, wanton and merry; full of dalliance and fair language; knew the taverns, hostlers and tapsters in every town, but shunned the beggars; ‡, could toy like a whelp, and lisped somewhat for wantonness, to make his English sweet upon his tongue. It had been well however, if the friars had merely acted up to this insignificant character; but they at last, adding vice to folly, admitted murderers into their society: were great liars and contentious, and obtained money to procure pardons for condemned criminals. Among a variety of other vices, they were in the constant habit of haunting and frequenting suspicious places to enjoy gossiping, of making idle and useless visits to women, and receiving presents from some of them who were of bad character \*;

§ Ibid. f. 127. a.

|| Ibid. f. 369. † † Ibid. f. 249. a.

¶ And how the fryers followed folke that was ryche,

And folke that was pore at lide price they set,

And no cors in hir kirkeyard nor kirke was buried

But quick he bequeth hem ought or quite part of hir debts. *Piers Plowman*, l. lxj.

for it appears, that they were great favourites with the ladies:

"For when the godeman is fro hame,  
And the frere comes to onie dame,  
He spares nought for synne ne shame.  
If women seime of hert full stable,  
With faire behest and with fable.  
Yay can make yer hertes chaungable."

*M.S. Cott. Cleop. B. f. 62.*

*Hermits.* These were men in whom solitude was considered as an essential characteristic; but it appears, they were of a different opinion, and consequently, were as little respected as the rest of their ecclesiastical brethren. Piers Plowman thus mentions them:

In habyte as an hermit, unholle of werkes.

*Fol. i.*

Even in their pilgrimages to the shrines of their several saints, they were accompanied by their mistresses. † Piers Plowman alludes to this in the following lines:

"Hermets on a beape, with hoked staves,  
Wenten to Walsingham, and her wrecches after;  
Great loubes and longe, yt loth were to swinke," &c.

*Fol. i.*

Cutwode, one of our elder English poets, has satyrized this custom of performing pilgrimages, in the following fanciful description of a bee who turned pilgrim:

"He made himself a pair of holy beads:  
The fifty wex were of gooseberries:  
The paternoster, and the holy creeds,  
Were made of red and goodly fair ripe cherries:  
Blessing his maryhold with *ave-marias*,  
And on a staff, made of the fennel stalk,  
The beardless hang, whilst he alone did walk.  
"And with the flower, monkhood, makes a cowl;  
And of a grey dock got himself a gown;  
And looking like a fox, or holy fool,  
He barbs his little beard, and shaves his crown,  
And in his pilgrimage goes up and down;  
And, with a *wobret-leaf*, he made a wallet.  
With scrip, to beg his crumbs, and pick his sallet."

*Cutwode's Catha Portorum*, *Stans*, 116, 117.

Female hermits were also equally faulty. Thus at a part of the abbey of Whally in Lancashire, near the gate, one *Iold Heton*, widow, who had petitioned Henry VI. to be admitted anchoress there, afterwards went away disgusted; and it appears that many recluses had done the same before, and that divers of their servants were with child within the place. It is not improbable that this circumstance happened to themselves; for in the visitation of *Edmundsbury*, it is commanded that the monks do not hold frequent and familiar conversations with the nuns near

\* Insuper firmiter inhibemus ut loca suspecta, fabulationes, visitationes mulierum victuorum, et inutiles penitus caveant. . . . Prohibentes nihilominus ne manuscula suspectis mulieribus capiantur. *M.S. Cott. Nero. A. xii. f. 157. b.*

‡ *Wobret* or *Woburn* is of Saxon origin, and still used as the common name of the *plantaine* leaf, in some parts of Scotland, particularly in *Terriodale*.

the monastery, with recluses women, that so all ground of suspicion may be taken away. ‡

(To be concluded in our next.)

#### INSANITY.

*Nihil humanum a se alienum putat.*

We are inclined to believe that until lately no subject of rational inquiry was so completely under the influence of delusion, at once unfeeling and disgraceful to humanity, or so entirely absorbed as it were in Gothic darkness, as that of insanity. Heretofore, in contemplating the fate of those afflicted with this disease, who were often the most ingenious and virtuous of their species, we have been incessantly shocked with the selfishness, the want of commiseration, and the brutality, which so invariably enters into its history; but as light has dawned from the impulse given to this department of knowledge by the House of Commons, it is to be hoped that it will be more generally considered and understood, and its attainment consequently held in higher estimation among men. We will take upon us to state, that it requires the highest professional talents to undertake the management of the insane; and this is the opinion of the profession at large, who decline all intercourse with it from feeling that incompetency which is the result of their want of experience.

The majority of medical men may practise the varied branches of their profession, as far as regards corporeal diseases, with success and credit to themselves; but the same latitude does not, as a consequence, extend to the maladies of the mind. It is true that the knowledge of corporeal diseases constitutes the foundation of success in this department of the medical profession; but the superstructure that is to be added to the possession of the knowledge of corporeal diseases is immense, and requiring great experience, great mildness, and decision of character from education and from nature, united to an understanding that is duly cultivated by an attentive consideration of the faculties of the mind, and of the means that influence these faculties in conducing to health and to disease.\*

With these observations, we here again repeat, because anxious to enforce the conclusions to which the analogy leads, that when the human frame is assailed by corporeal diseases, however inveterate in their character or of whatever duration, the prospect of conquering these maladies, by appropriate remedies, prevails not only in the

‡ *Interdicimus et monachis frequentia et familiaria colloquia cum monialibus huic monasterio vicinis cum mulieribus reclusis, ut ita tollatur omnis materia suspitionis.*

*M.S. Cott. Jul. B. f. 159. a.*

\* As advocating generally the cause of this class of men, as attempting to alleviate the extent of suffering arising from this alarming and increasing source of human misery, we will here avow our opinion, that where such qualifications are wanting on the side of the physician, or the medical superintendent, much mischief will assuredly arise, and many will be sacrificed to permanent insanity from such defects.

minds of the patients so attacked, but their friends are influenced by a similar mode of thinking; and were any one to suggest to those labouring under such bodily afflictions, the utility of such remedies, or to dissuade from their application, as almost always takes place in mental derangement, certainly such advice would be regarded as the offspring of debased feeling, or charitably ascribed to something like insanity.

This method of reasoning as to the efficacy of the remedial process in bodily disease, is at once humane and just; and here the patients themselves and their friends all contribute to the same end, that of restoration to health; but in mental diseases, our habits of thinking have been perverted, they have taken a course widely different from that adopted in corporeal diseases, which is so consistent with truth and humanity; and this most erroneous estimate of insanity by medical men and others, is truly singular, when we reflect that the maladies of the mind are either directly or indirectly dependant on bodily derangement for their permanency. Our object, therefore, has been to do what we can to correct this injurious delusion, so unfortunately and so unjustly prevalent as to mental disease, by placing before our readers the cruelties and the difficulties to which this order of our fellow creatures has been subjected, and thus to prove, from obvious and incontestible sources, that its obstinacy has not arisen from its actual nature, but from the treatment to which the sufferers have been subjected.

Here we have no hesitation in stating, that insanity, whether regarded in a preventive or a curative point of view, is much more under the control of diet and of medicine than fever, dysentery, small-pox, measles, gout, or rheumatism, which have been, and which still continue to be the great scourges of human happiness, and the principal sources of destruction to human life. We ask, what would have been the fate of those afflicted with such bodily diseases, had they been treated with the same neglect that has, with few exceptions comparatively speaking, attended the maniac? The answer must be, that in many cases nineteen out of twenty would have perished. The corporeal stamina in mental derangements, when regarded through the medium of muscular vigour, are, generally speaking, not only good, but in some instances surprisingly increased, which shows that the circulation, and also the digestive and assimilating faculties are adequately performed, although always more or less deranged.

The wonderful agency of the mind over the body is strongly illustrated in this most extraordinary malady, as those impressed with it are certainly by no means so susceptible of the afflictions which at once torment and destroy the other parts of society, unless when gross neglect prevails. Tooth-ache, rheumatism, dysentery, fever, are little known among this class of men, when well regulated.†

‡ These curious practical remarks, added to the general philosophy of the Writer's view of the subject, will we trust add to the impressiveness of the arguments a weight which we, as spec-

When not cured, their systems are gradually worn out by the exhausting influence of the mental disease over the powers of the body, and they sink the victims of serous apoplexy or of paralysis. Local diseases excepted, we affirm, that there is no corporeal malady so much within the reach of judicious, moral, and medical treatment, as insanity in its early stages. The influence of diet in curing this disease has never been generally and fairly tried, which is another proof of the apathy that has existed as to the fate of this most unfortunate order of men. By a well-regulated diet the cure as observed, will be invariably expedited, and it is by such arrangements alone that the restoration of mind can be rendered permanent: and here we have to lament that such agency, so important in its tendency, has seldom or never been employed with this view; so that either its importance has not been understood by medical men, or they have yielded to the false humanity of friends, and thus by deplorable and almost criminal weakness, the patients have been as decidedly sacrificed as if they had been subjected to the most brutal treatment.† The treatment of mental derangement presents three distinct characters of establishments—that of public hospitals; that of private hospitals, as those supported by the pecuniary resources of the maniacs or their friends may be called; and lastly, conducting the cure privately, through the medium of a detached cottage.

We here put out of the question domestic treatment, which in this disease is seldom admissible from the patient steadfastly denying the existence of mental alienation as affecting himself; and hence his often rancorous aversion to his immediate relatives—a sentiment of resentment that is not surprising, when his own reflections, which will not admit the presence of disease of the mind are duly weighed, and are contrasted with the measures of restraint he is necessarily obliged to encounter, and which are invariably ascribed by him to the plots and contrivances of these friends. Our object is to advert to those principles which are of general application

culators, could not expect from the public. Indeed, for humanity's sake, we rejoice to find that these essays have produced a very strong sensation. &c.

† The accompanying extract of an account rendered from an insane establishment, to the friends of a lady confined therein, will place this in a remarkable point of view.

S cigars, pipes and snuff .....	5	18	11
Wine, porter, and spirits, 3 weeks .....	5	0	0
Wine, from 12th May 1819 to 15th			
March 1820 .....	28	4	0
Spirits, 5s. 3d. per week, 44 weeks .....	11	11	0
Ale and porter, one pint per day .....	3	17	0
	54	10	11

She is only thirty-six years of age; and considered incurable at the establishment in question, and certainly such indulgence will render such prognosis infallible, as her insanity without the interposition of a miracle, must, under such management, increase—from drunkenness being added to mental disease.

and may be generally understood, leaving to the discernment of those in attendance the selection of such cases as call for deviation. These three varieties of arrangements have each their recommendations; and we may observe, that the advantages of the former two principally arise from the facilities which they give to the prosecution of the cure of those who are deranged in mind, on less expensive principles than the cottage system will admit of. But assuredly, when otherwise considered, these establishments are attended with many circumstances which must be in the highest degree revolting to the feelings of maniacs, in conducting the restoration of their minds; and which will be severely felt by all, but particularly by females during their lucid intervals, and the periods of their convalescence: and besides the distracting scenes that inevitably must be encountered at such institutions, the very idea of having been confined in a madhouse, and exposed to vulgar observation, is not only harassing to the individuals afflicted and so treated, but must also be painful to their relatives who possess a proper sense of character, and who are endowed with just feelings and affections; and we consequently think that where it can be done, these painful circumstances ought to be obviated.

The experiment of private treatment in a detached cottage with a suitable garden for exercise, is therefore certainly due on every principle of justice and humanity, to those afflicted with mental disease whose circumstances are affluent, and therefore competent to this mode of cure; as by this means the mind of the maniac which is generally stamped with a high degree of sensibility, will avoid scenes of such a nature as must, in many instances, have laid the foundation of an incurable malady. The distinction between wholesome restraint, which becomes at times necessary under all modes of accommodating and treating the deranged in mind, and that springing from the want of living force in the character of respectable attendants, is indeed vast. To illustrate these important considerations, and to show what we conceive the maniac is entitled to under the circumstances to which we have adverted, we shall suppose a man of fortune and of high sensibility, afflicted with bodily disease, (leprosy for example) that renders his separation from his friends necessary. Let us further suppose, that hospitals exist for its cure, founded on public beneficence, as well as others, supported by the pecuniary resources of the patients themselves or their relatives, and open to all varieties of moral character and disease, who can pay the stipulated sum demanded for admission. We here ask, would the patient so afflicted have recourse to either of these establishments for his cure, where he must necessarily be compelled to witness the disorder in more aggravated forms than his own; and where his mind could have no repose, but be incessantly tormented with the exposure of the miseries of others as well as his own? Let us carry our illustration still further, by supposing that his relations, or strangers, had during the existence of this bodily disease, the command of his pro-

erty and the disposal of his person; would not these individuals, by enforcing hospital treatment, draw down on themselves the most marked indignation of all possessed of the sense of humanity, aware of the possibility of cure with more delicacy and increased certainty by private means?

This exposure has been too often the fate of the deranged; and that so many should have regained the full powers of their minds under all these disadvantages, must be admitted, as a proof of the highly curable nature of this malady.†

At these general receptacles, the afflicted patient must witness, even where the utmost humanity is practised, the varied ellutions of the complaint in others, with the concomitant coercions, besides other painful inflictions; and to shew their influence, we may state, that when the disposition to insanity exists, the individuals so predisposed should not allow themselves to witness such scenes, as they are likely to evolve the disease; and some examples of this nature are said to have occurred among medical men. When these transient visits afflict so deeply, what will not their constant action do, in permanently establishing the malady among those already afflicted? By conducting the cure in a detached cottage, the patient comes distinctly before the eyes of his physician, and his disorder will appear in its true form, without an aggravating alloy from the mind of the deranged being, tormented by the saturation of miseries, the invariable attendant of a madhouse.

The number of patients, the object of the physician's care, must on the cottage system be limited; and this constitutes another advantage, by giving ample leisure for an attentive consideration of their respective cases. The evils flowing from general principles, without a careful review of the particulars accompanying each case, must always be great, and offer serious obstacles to a cure.

These evils were felt, even where talents of the highest order conducted and presided over the medical department; and are sufficiently illustrated by the examinations before the enquiry into the state of madhouses by a Committee of the House of Commons. The

† The principle of destiny, which attaches to the plague among the Turks, has destroyed numbers beyond all powers of calculation. In our own country, Divine vengeance was not long ago supposed to have originated the venereal disease; its relief was therefore not attempted, and the victims were left to rot alive on some island or remote spot, abandoned by friends and connections.

During the reign of Charles the First, many were tried, condemned, and burnt as witches. These most horrid instances of persecuting a phantom as a reality, in short, of mental derangement, among men who (as maniacs generally are), were penetrated with a high opinion of their own wisdom and discernment, are amply humiliating, and should teach us to feel for the maniac, whose aberrations in many instances, are neither so remarkable, so mischievous, nor so deplorable. We have conquered these delusions; but many remain, of which posterity will judge.—Ed.

requisite attention to diet, to cleanliness, to ventilation, and dress, is in a great measure impossible where so many are assembled. We are certain, that where inclination and the means co-exist, on the side of the patient or of his friends, for following the third plan, the minds of many may be saved that will otherwise be lost by putting them into a madhouse, where the general occurrences are calculated to distract the strongest mind.

In 17, 18, and 19 cases out of twenty of the excited forms of the disease, the mind will be found not utterly lost; its powers are as it were eclipsed, and to be restored by judicious medical and moral treatment. The ancients appear to have been more successful in the treatment of insanity than the moderns; and this success probably arose, from directing their attention almost solely to the body during its treatment. We of the present day are inclined to regard their pathology as not consonant to sound and correct observation; yet their means of cure so deduced, and founded on the varied morbid changes which the blood and bile were supposed to have undergone, led them often to experience the highest enjoyment that can attend the exercise of the medical profession, in restoring their patients to society, to their friends, and to the numerous pleasures of social happiness. Their speculations as to the cause of all maladies, always held some material object and diseased change of structure before their minds, and which was to be remedied by active evacuation. They did not derange themselves by the abuse of metaphysics, in attempting the cure of their patients.

## LITERATURE & LEARNED SOCIETIES.

### PUBLIC EDUCATION.

We have received an official Report of the state of public schools in the Netherlands, during 1819, which was presented to the second Chamber of the States-general on the 20th ult.

• The influencing the mind of the maniac, is indeed of high moment; but this is neither to be accomplished by fear, by rally, nor by reasoning.

The maniac, from the very constitution and nature of his disease, is a suspicious being, fond of cross purposes; and therefore, the great consideration for the physician is to imperceptibly direct the attention and stream of thought of the deranged to fresh objects. In health, there is invariably a coincidence between the intellectual operations and those organs of the body conducing to a sound state of mind; and we are also of opinion, that the converse mode of estimating this intricate question will hold good; when these organs, so essential to sound judgment suffer, the mental operations will encounter a diseased change; or when the mind influencing these organs is deranged, such organisation will undergo a morbid coincidence of action.

It is from this view of the malady, which embraces the judicious employment of exercise of both mind and body, of medical and moral means, that success has, we know, arisen.—Ed.

From this Report, it appears, that in the Latin schools and colleges, the number of pupils is rapidly augmenting. In 1817, their number was estimated at 1000, and is now amounts to 1200. The schools in the southern provinces, which are divided into lycées and colleges, contained in the year 1813, 2750 pupils; the same establishments are now attended by upwards of 3800 pupils. A few years back, the study of the Greek languages was almost entirely neglected in the southern provinces; but at present it is taught in almost every college, and in most of them an admirable plan of tuition is adopted. Mathematical instruction is in general attended with the best success; but the regular teaching of ancient geography, ancient history, and mythology, less generally diffused.

At Ghent, the first stone of a new university has been laid. At Leyden, a building has been begun for the same object; and at Liège, the Regency has granted a piece of ground for the establishment of a botanical garden. The celebrated cabinet of natural history, which belonged to the late professor Brugmans, has been purchased for the University of Leyden; and the universities of Louvain, Liège, and Ghent, have obtained collections of mineralogy, natural history, instruments, &c.

The number of students has also considerably increased this year. At the beginning of November, there were 254 at Louvain, 381 at Liège, 201 at Ghent, 315 at Leiden, 205 at Utrecht, and 215 at Groningen.

A numerous meeting took place at Brussels, on the 20th of May, to celebrate the opening of a new public school of mutual instruction.

## ARTS AND SCIENCES.

*Cure for Fever.*—We learn from the 70 Number of the *Lis*, that the good effects of the newly discovered remedy, the *chinquina*, or *unnona febrifuga* in fevers, and especially intermittent fevers, have been fully confirmed by the experiments, not only of the physicians appointed for the purpose by the Royal Medical Society at Madrid, but also of others. The powder, given in doses of 1 scruple to half a dram every 3 hours, has checked the fever, and wholly cured intermittents of some months standing; which had resisted the Peruvian bark and other approved remedies. It is added, that the only genuine chinquina root is to be had of Dr. Ant. Ring, apothecary, at Madrid, in the street Meson de Parades; and the public are warned of adulterations which have taken place in other expensive medicines disseminated by Dr. A. Ring, and Dr. Joseph Parvo, botanists with the expedition in Peru and Chili in South America.

### HYDROPHOBIA.

In consequence of a petition from Francis William Sieber, (of whom we have had occasion to speak in the *Literary Gazette*), respecting the discovery of a

or the hydrophobia, his Majesty the Emperor of Austria, has signified to him that he has been pleased to grant him for life an annual pension of 500 florins; the half to be continued to his lawful wife after his death, in case he makes known any certain remedy, or any certain mode of cure for the hydrophobia, caused by the bite of a mad dog. This pension is to commence as soon as the efficacy of the means proposed shall be shewn to be proved by experiments made in his Majesty's dominions.

## ECLIPSE OF THE SUN.

Contrary to the calculations of most of the astronomers, the late eclipse of the sun was visible at Florence for the space of 1' 14". The end of the eclipse took place in at city at 4h 25' 6", that is, to 34" after the moment predicted by the astronomer Carrini; and 28 after that fixed by Professor nari. Baron Zach, who observed the eclipse at Bologna, will shortly publish his observations on the circumstances which accompanied this phenomenon. These observations are expected to be highly interesting, in respect both to astronomy and geography.

## ORIGINAL POETRY.

[By Correspondents.]

TO A SISTER IN INDIA.

*On the Anniversary of her Wedding Day.*  
I am met to hail the return of a day,  
Which seal'd a below'd one's doom;  
Should claim a cheerful and sportive lay—  
I mine will be tinged with gloom.

ere is wanting one to the social throng—  
I can we smile and be gay,  
Who inspires people should join the song—  
I oh! she is far away.

I sighs must mix with each lighter sound,  
They cannot be hushed at will,  
I can we forget that the pledge which goes  
round,  
Is the health of the absent still.

we think, when in childhood's happy day,  
Talk'd of the days to come,  
I thy heart and hand should be given away  
I'll thee from thy home.

Id we guess that a stranger would claim thy  
hand,  
I from each early friend;  
I thy faith should be pledged in a distant  
land,  
I in our pray'rs alone could blend.

now to our home to wish thee high  
e to break a heart so fond,  
I dare not wish to dissolve that tie  
th has loosen'd each infant bond.

feel 'tis a tie all others above,  
Ist thou wish the same for me;  
Ist thou seek to part me from him I love,  
Id scarcely pardon thee.

would I could lose each lingering day,  
Memory of its tear,  
In the long long period of absence away,  
I wake and find thee here.  
247A, 1839.

CLARA.

## IMPROMPTU.

*A gentleman whose promptness at impromptu renders him the delight and aversion of all his friends, was baited the other day in a literary society for a specimen of his talent. The conversation had, as usual, run upon the proceedings in the House of Lords; and the person suggesting the theme observed, that it had once been wittily said by a wit under similar circumstances, to whom "the ring" was proposed, that the king was no subject, he therefore gave "the queen." Upon this the party immediately wrote*

From pseudo scholars and a factions press,  
For months I've nothing heard, nor nothing seen  
But one stale topic; which makes me confess,  
The first and chief of subjects is THE QUEEN.

## TRANSLATION

*Of the French Impromptu "Grande Peur, grande Joie;" which appeared in the Literary Gazette of October 21.*

The canon!—count them.—One—let no man speak!

Two—listen!—Three—ten more, and pitying heaven

Hath saved our country.—Four—a son we seek:  
Five—Six—how every heart is beating!—Seven—  
God give us comfort!—Eight—this dread suspense!

Nine—in thy mercy.—Ten—great Providence,  
Fulfill a loyal people's prayer.—Eleven—

And bid upon our sky a bright dawn break!—  
Twelve—terrible pause!—THIRTEEN—France,  
weep no more!—

The Prince a fiend had slain, an angel doth restore.

EDMUND L. SWIFT.

## A word to the wise.

Woe to the fool who keeps his brains  
In travail with a scribbler's pains.  
Still deeper woe to him whose life  
Crouches beneath a talking wife.  
But save me from his days and nights  
Whose wife, in fate's lost malice, writes.

No matter for his wants or wishes,  
My lady's deep in other dishes.  
Has she on earth a wandering cousin  
(If Scotch she has them by the dozen),  
And not a wind blows earth around  
But brings some news of hanged or drowned.

The house may tumble through the windows,  
While she is scribbling to the Hindoos.  
'Tis all the same, or lov'd, or hated,  
A dotard ten removes related,  
A half cast aunt, a pretty sister—  
The Nine are summoned to assist her.

Though modern bards can write their fill,  
Without much trouble to the *Mill*;  
Alike to her, birth, death, or marriage,  
Her muse alone knows no miscarriage,

And as the annual day returns,  
Again her brain prolific burns.  
Not one of them can wed or die,  
But off goes Ode or Elegy.  
Her goose quill trickles smile or tear,  
And hunts her victims through the year.

If to your board you ask a friend,  
No dinner till the stanza's penn'd.  
In vain the cook below is roasting,  
The butter idly round you coasting;

In vain your guest sits making faces  
In hunger's most approved grimaces;  
In vain you grumble, sulk, and ring—  
My lady's at the *muses'* spring.  
Just wrapp'd in all Pegasus vapours,

Her stays unlaced, her hair in papers;  
Five fathom deep in verisifying,  
Her ruff and ringlets by her lying,  
The world's great business must stand still  
While Sappho flourishes her quill.

SOCRATES.

Imitation of Horace, Epist. 20, Lib. 1.

"Vertuuum, Januque liber," &amp;c.

How is't my Book, you turn your eye,  
Towards Murray's shop so wistfully,  
That there for public sale displayed,  
In Davison's best type arrayed,  
And bound in Russia, marble-edged,  
You may no more be idly wedged  
'Mong musty manuscripts, nor lie  
In modest, dull obscurity!—  
Repining that you're shewn to few,  
And greedy of the common view?—  
Oh stay!—'twas not for this that I  
Conceiv'd and brought thee forth!—Well! fly  
Where folly leads thee—but, beware,  
There's no retreating when you're there.  
'Ambitious fool! for this to long!"  
Will be the burden of your song.  
When critic's carp, and reader's fire,  
And thou shalt seek, nor find, a buyer!  
Yet, if my heart forbodes a-right,  
(Unwarped by any angry spite)  
You perhaps may linger on the town  
Till youth and novelty are flown,  
To vulgar eyes ignobly doom'd,—  
By each coarse barrow-woman thumb'd,  
Or feed the bookworm and the moth,  
Reposed for aye in unknown sloth.  
Then I (thy monitor in vain)  
Shall mock and ridicule thy pain,  
As one who could not move his ass

To wind along a mountain's pass,  
So thrust him headlong down the hill—  
Who'd save an ass against his will?  
Each stuttering old pedantic fool  
Shall introduce thee in his school;  
Each village mistress seize on thee,  
To teach the clowns their A B C.  
But if beneath the arbour's shade  
To higher audience thou art read,—  
Then tell them, that though lowly born  
I would not on the great man fawn;  
Tho' from the sparrow's nest I spring,  
I mount upon the eagle's wing.  
Make no deduction from my birth,  
But add as much to grace my worth;  
In time of trouble or of ease,  
Thebest and wisest I could please;  
That Milman, Scott, and gentle Moore  
To none have ever op'd their door;  
My stature—somewhat short; my hair  
Grown prematurely grey with care;  
I bear the sun's most frugal beam,  
Or joy beneath his brightest gleam;  
Am quick to ire—as quickly mild,  
And tractable as any child;—  
Should the more curious seek to learn  
How long this frame of mine has worn,  
Why say—as far as I remember  
I'm near my fifty-eighth December—  
And first saw light upon the day  
When good old George began his sway.

Oct. 16th.

## SKETCHES OF SOCIETY.

THE EDITOR'S COOK!

The increasing luxury of the age has been,  
as it ought, bitterly inveighed against by eco-

nomists, moralists, and divines—in pamphlets, books, and sermons. It never, however, was more shockingly exposed than by the confession of the fact which forms our top line. An Editor of a Literary Journal to have a cook!

Rastra et sarcula tantum assueti coquere.

The crime is monstrous, but like other crimes it has brought its punishment; and while we confess the heinous sin, we have to throw ourselves on the clemency of our readers for the disaster it has occasioned. In our last Number we advertised them, that in this publication we should commence a series of original letters from Paris, giving an account of all the belles lettres, transactions, &c. in that lively metropolis. We had the first and second epistles in our hand at the time our promise was given; but lo! the cook (*Popinaria*, whom may the furies fricassee!) having found on our study floor, with which she had so little business that we wish it had been a thrashing floor for her sake, a sheet of paper in your cramped French hand, presumed that it was as unintelligible and useless to all the world as it was to herself. In brief, the day was raw, our fire was low, the slut compassionate; and, oh miserable catastrophe! those pages with which we kind readers, were devoted to light the wool and relume the blaze of our expiring grate. We have written to the capital of France to have the loss repaired; and if the Duke of Bordeaux's cawdle, cradle, and cackle, do not utterly engross the entire mind of France, we may expect that so grave and distressing an accident will obtain the earliest possible remedy.

#### CHESTERFIELDIAN INSTRUCTIONS TO YOUNG CHESS PLAYERS.

There is not an act in life that can be well performed without confidence: the presumption that we shall succeed in our undertaking, carries us far towards the accomplishments and imparts a chivalric grace even to defeat. At chess this quality is essential. Sit down with an air of insolent superiority, which will daunt and discompose your antagonist; it will also fill the bye-standers with a high sense of your merits, the majority of whom may not stay to witness your defeat; and if they do—courage is a quality that always entitles a man to respect.

2d. Get the first move by assumption or finesse: it is the only part of this game that admits of chance, and consequently permits of cheating; the opportunity, therefore, only once presented, should not be neglected by a player of genius.

3dly. Play out the king's pawn two steps; it is customary, and will show that you understand the rules of the game. After a man has demonstrated that he is acquainted with rules and customs, he may neglect or transgress them with impunity: the world blames us not for doing what is wrong, but for not knowing what is right.

4thly. Having thus far advanced this pawn, leave him to his fate; it is thus that the greatest men deal with their child, and

why should you take more pains about a worthless peg than they do concerning the inheritors of their wealth and titles, who push their offspring like isolated pawns into the world, and trust to the obliquity of their movements for their success and promotion in life. Grovelling players apply their ingenuity to the support of their pawns; but it shows a little mind to be solicitous about little matters.—“Pray you avoid it.”

5thly. Play out your pieces with the utmost dispatch; and remember nothing imposes more on the world than a shew of independence; therefore let them stand by their own merits, and lend them no mutual support: the very word conveys a sense of weakness, which a wise man will be slow to admit, much more to publish.

6thly. Should the fall of a piece be inevitable, permit no symptoms of embarrassment, or thought, as it is commonly called, to escape you, but philosophically wait the event, and when it happens, clamour out, “an oversight!” and exclaim against the *dirty advantage*. Should your opponent propose to give back the last move, the piece being in a posture of irremediable jeopardy, decline the offer with contempt, mingled with insolent defiance; and express a modest conviction that superior skill will yet be more than a match for numbers, though aided by all the mean advantages of which he may be pleased to avail himself. Nothing renders a man more amiable or interesting in the eyes of the fair sex than ill usage, which neither affects his purse nor his honour: indignation, however misplaced, is becoming; and provided you express your indignant feelings with grace and spirit, the world will not scrutinize the propriety of your anger:—thus, instead of winning a game of chess, you may engage the esteem of persons of worth—and a paltry triumph gives place to a nobler ambition.

7thly. Should your foe's Queen find her way into your quarters, and be surrounded and cut off by your pieces, by no means urge her to despair—there is no knowing what that might prompt; but remember to “build a golden bridge for a retreating enemy”—let her escape. I have known Queens who, thus pressed, have by a sudden effort perplexed the schemes and confounded the movements of kings, bishops, and rooks—in no wise let yours do so; reflect that nothing better becomes the sex than a reserved and unobtrusive carriage. I would have your morality shine even in a game, especially in one that is never played for money; therefore give the Queen a private and retired station on the board, or place her before the king, where, being enlaid by a rook, she may fall in the face of day, a pattern of conjugal virtue and fidelity.

A. W.

#### THE DRAMA.

COVENT GARDEN. *The Stranger*, acted on Friday, introduced a young lady to the metropolitan public as Mrs. Haller, and Mr. C. Kemble as the *Stranger*, for the first time. *The debilitate* made a bad choice of part to begin with. Whatever are the demerits of

the German drama case is one of its striking properties; and however improbable the incidents and situations often are, strong passion and bursts of nature almost always distinguish the characters. The artifices do not lie so much in the dialogue and action, as in the division and management of the scenes; and men, women, and children are generally saying and doing what is appropriate under their circumstances, when the fall of the curtain or some other *coup de theatre* reminds us of the author's art and the tricks of dramatic representation. Now the various expressions of ease, passion, and nature, present at all times the greatest difficulties to a performer; and that which the highest abilities, aided by long study, practice, and self-possession can hardly achieve, is not to be expected from the arline, novelty, and restraint of a first appearance. Accordingly we found the new Mrs. Haller declamatory and artificial, instead of being passionate and natural. She spoke in an assumed hollow sepulchral voice (an imitation of the worst quality of Miss O'Neil after the tutoring of London deteriorated her acting); and we did not hear half a dozen of sentences delivered in her real tone. A stiff furrowed muslin gown superadded the outward appearance of formality; and with scarcely an exception, the whole performance suffered mortal injury from the causes which we have assigned. The young lady would have done her talents more justice, and been more likely to succeed, had she attempted one of the more usual casts of tragic heroine. Her figure seemed to be good, but her countenance deficient in intelligence. In a few passages, where she forgot the simulation of voice and the necessity for keeping the muslin gown in its protrusive position unrumpled behind, she displayed tolerable powers; but none to induce a belief that the great blank which is wanted to be filled up on the stage by the coming forth of a first-rate female tragedian has yet any chance of being supplied. Mr. C. Kemble mounted no feather in his cap of fame by his personation of the *Stranger*. His model was evidently his brother—a nobler one he could not take, and it is no mean praise to say that he very frequently elicited the finest resemblance. Upon the whole it was not so *spirituelle* as Mr. J. Kemble's; but where energy and force were wanted, nothing could be more effectual. The glimpses of feeling which flicker through the gloom of misanthropy were often happily marked (in the meeting with Steinfort for instance), and the general traits of mingled feeling and morbid discontentedness were impressively, and occasionally very nicely delineated. The moral of the play is bad and dangerous; the apologies for crime are contradicted by its consequences, and guilt is made so amiable that it throws virtue into the back ground. We should not be sorry were the *Stranger* forever banished from the boards.

*A Race for a Wife*.—Mr. Morton has adapted this extravagant bagatelle from the French *Le Premier Venu*; but either with so little skill, or such bad materials, as to afford no ground for the Race having a long run. It is a poor piece of workmanship, and

s not variety enough even for a farce. A orting baronet (Blanchard) takes the wise solution of marrying his daughter (Miss saumont) to one of two Captains (Jones d Abbott) who starting fair from their quarrels shall arrive first at his mansion. The artifices and jostling of the rivals in this ploit, aggravated by the stratagems of eir common servant (Liston), constitute e whole machinery; and from the beginning e end, it is merely a repetition of the e principle, and almost of the same in- ents. No interest is raised, and there is y little fun to laugh at, though the per- rners did all they could, and those we have ationed, as the public well knows, can do ach with very scanty opportunities. Miss e made her first curtsy at this house in mple character, Phoebe; and was received e kindest manner. Master Longhurst ng a delicious little melody "Fly all away," ich needs but to be published to become extremely popular air.

[Since writing this, we observe the farce is nect: it is hard upon us that we dare hardly e a days) write a dramatic CRITIQUE early e week, without imminent peril of having it, ore the end, converted into an EPITAPH—*Sic transit Gloria pugnatis.*"]

## VARIETIES.

A collection of rare animals has lately been ded at Marseilles, for the Menagerie at ris. Among them are four crocodiles in three to four feet long, an ostrich of lam, and a beautiful marine tiger (*Tigre rin*), the only one in Europe.

*Antiquarian researches.*—M. Cousinier merly Consul of France in Turkey, is ed to be on the point of undertaking a rey into Lower Asia, which will be hly important to the Arts. His intention o study the antiquities of that country, o cause excavations to be made among ruins of the ancient Magnesia, on the ks of the Meander, from which it is hoped t many interesting archaeological discov- ies will be made.

**THE CASTLE OF MARIENBURG IN PRUSSIA.**  
The Castle of Marienburg was built by Knights of the Teutonic order, in the e of their prosperity. This splendid and arkable edifice had suffered severely, not uch by the injuries of time, as by gross ligence, and by being frequently emed for the most common purposes. The ch, if we are rightly informed, used it a magazine, and even converted part o it stabling for their cavalry. As soon, ever, as the Prussian monarchy regained ndependance, it was resolved to restore noble monument of antiquity to its ine splendour, and considerable progress been made in it this summer. They soon proceed to the repair of the great e of the Virgin, which is placed outside e church. It is 25 feet 4 inches high, at of the infant Jesus is nearly 6 feet. in a niche of blue and gold, formed of sic work, as well as the statue. It is a ; unique in its kind, mosaics being ge- ly flat surfaces. It has stood for three

hundred years in the open air without being spoiled, and has still lustre. The mosaic work is composed of pieces of glass an inch square, cut in the form of a wedge, and a plate of gold is laid on them.

*Two dwarfs.*—A man and a woman, natives of Lapland, have arrived at Grenoble: the man, 42 years old, is 3 feet 1 inch in height; the woman, his sister, aged 52, is 2 feet 11 inches high: they are both very well made, and speak the Italian language with great fluency.

**ITALIAN DIALECTS.**—At the present moment, when the subject possesses extra- ordinary public interest, we copy from the *Oxford Herald* the following specimens of the three principal Italian dialects; those spoken at Genoa, at Milan, and at Venice. They differ from the real Italian (spoken by the well-educated) so much, that they might be regarded as very different languages. The specimens consist of the Lord's Prayer, extracted from that learned work of Adelung, of which an account was given in a late Literary Gazette. The proper Italian is as follows:—

*Padre nostro, che sei ne' cieli, sia santificato il tuo nome; il tuo regno venga; la tua volontà sia fatta in terra, come in cielo; dacci oggi il nostro pane quotidiano; e rimettici i nostri debiti, come noi ancora li rimettiamo a' nostri debitori; e non c'indurre in tentazione; ma liberaci dal male.*—Amen.

**GENOA.**—*Poe nostro, che sei ne' ze, u vostro nome seja santificno; regna u vostro regno; si fasa u vostra coente, come in ze, così in terra; u pane nostro quotidiano deeme anche; e perdonez a nui i nostri debiti; e noi perdonemo i nostri debitori; e non ci lascie cadè ne tentazin; ma liberateci da ma.*—Amen.

**MILAN.**—*Padri nes, che sei ne' cieli, cas sia santificau tuo nom; cas regna il tuo Reg; cas faghias la tua volontà, com in ciel, così in terra; pagn nes di ogni di denel inki; e rimeti a noi i nes debet, come noi a nes debitor faghium; e non ec lasè cascà mighia in tentazin; ma liberen dal male.*—Amen.

**VENICE.**—*Parè nostro, che si nel ziolo, sia santifol el nome tuo; regna el regno tuo; sia fatta la volontà tua, siccome in ziolo, così in terra; el pane nostro quotidiano dena ozi; e rimetti a nu i nostri debiti siccome nu li rimettemo a' nostri debitori; e non ne induci in tentazione; ma liberene dal male.*—Amen.

The language of Como and Bergamo is notorious as being the worst Patois in all Italy.

## METEOROLOGICAL JOURNAL.

OCTOBER, 1820.

*Thursday, 19*—Thermometer from 39 to 52. Barometer from 29, 48 to 29, 39.

Wind W. 1.—Morning fair, with sunshine; the rest of the day cloudy, with rain in the evening.

Rain fallen, 125 of an inch.

*Friday, 20*—Thermometer from 35 to 56.

Barometer from 29, 08 to 29, 20. Wind S. W. 2.—Clouds generally passing, with rain in the evening.

Rain fallen, 175 of an inch.

*Saturday, 21*—Thermometer from 40 to 52.

Barometer from 29, 48 to 29, 72. Wind S. W. 1, and 2.—Clouds passing during the morning, the rest of the day clear.

Rain fallen, 025 of an inch.

*Sunday, 22*—Thermometer from 32 to 50.

Barometer from 29, 20 to 28, 88. Wind S. W. 4, and S. 1.—Generally raining till noon; afternoon and evening changeable.

Rain fallen, 05 of an inch.

*Monday, 23*—Thermometer from 41 to 53.

Barometer from 29, 20 to 29, 32. Wind W. 2, and S. W. 3, and 4.—Generally cloudy; rain at times.

Rain fallen, 35 of an inch.

*Tuesday, 24*—Thermometer from 40 to 50.

Barometer from 29, 09 to 29, 88. Wind S. W. 4.—Afternoon clear, the rest of the day cloudy and showery.

Rain fallen, 125 of an inch.

*Wednesday, 25*—Thermometer from 37 to 52.

Barometer from 29, 16 to 29, 49. Wind W. 2, and 4.—Middle of the day clear; morning and evening cloudy.

Rain fallen, 35 of an inch.

On Tuesday 31st, at 52 minutes, 22 seconds after 7 o'clock, the 2nd Satellite of Jupiter will emerge from an eclipse.

On Wednesday November the 1st, at 42 minutes, 21 seconds after 7 o'clock, the 1st Satellite of Jupiter will emerge from an eclipse.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

The compositions from Huddersfield (sent by D. B—) seem to have little to recommend them except the distress of the writer, to which we should be happy to administer some slight relief, though we do not feel justified in inserting the verses.

\* Circumstances induce us to postpone the commencement of the series of papers to be called *The Shadow, till the new year*. For that period we have stored several communications. If Satan pleases to keep his word for once, and send his second Epistle, his correspondence shall appear separately in the interim.

Any one in want of a ton of bad poetry, may have it for the price of the paper as waste, at the Literary Gazette Office, 362, Strand. A nearly equal quantity of inferior prose, on the same terms.

N.B. As there are so many persons who like to write such things, there may be persons who like to read them: if any such incline to purchase, we shall expect an advance of 1½ per cent. ad valorem; and the following sample of the wares may be relied on, as literally the conclusion of a long poem received this week upon the theme, "Yours sincerely," at the bottom of a lady's letter.

What then can I, while o'er my morn of life Dull clouded winter holds her surly reign, And cank'ring cares and fears increase the strife My straighten'd wishes in my soul sustain.

What then can I, the words yet doubly sweet Had met those eyes, which vainly must eyes you, Tho' from thy lips themselves, love's fav'rite seat, I'd caught the words fresh with their balmy dew.

Then Juliet, tho' most tenderly, sincerely, Humbly, adoringly, I bend the knee, And swear that swain never shall so dearly Loved, as I am willing to love thee.

If, as she ought, fortune would act fairly, And change as I could wish my destiny; But as it is, heart broken I recline— Old Romeo's fortune it was bliss to mine!

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom : but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 198.

SATURDAY, NOVEMBER 4, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Letters written during a Tour through Normandy, Brittany, and other parts of France, in 1818, &c.* By Mrs. Charles Stothard. London, 1820. 4to. pp. 322.

We could hardly have imagined that a French Tour, after all that have gone before, could have been made so pleasing and so interesting as the present, which does infinite honour to her talents, and has added another of our fair countrywomen to the list of distinguished female writers. Mrs. C. Stothard is the wife of the artist, whom we mentioned in a recent review of Mr. D. Turner's Normandy, as being employed by the Antiquarian Society to copy the famous Bayeux Tapestry, and she accompanied him in his excursion to execute that commission. But besides a residence of two months at Bayeux, our travellers visited many parts of Normandy and Brittany very little frequented by English, though not only extremely curious in a modern point of view, but thick sown with historical recollections of the most striking nature. On these places Mrs. S. has remarked with all the lively acuteness of her sex, and produced a volume of local and historical description of an exceedingly agreeable kind ; in which the entertaining labours of the pen are illustrated by many very beautiful specimens of architecture, costume, &c. from the pencil of her husband. Upon the whole, making allowance for a few slight inaccuracies in style, and one or two short digressions, we have to express our entire admiration of this work ; and announce it to our readers as one eminently calculated to amuse them from its manner, and delight them with its embellishments.

Previous to quoting what appears to us to be most worthy of extract, we shall briefly state the route pursued, and name the principal towns whence the letters are dated. Our charming author landed at Dieppe, and after a trip to Eu, went by Rouen to Paris. At Paris she sojourned a short time ; and though we shall find occasion to transcribe some of her observations there, the mass might have been omitted without injuring the originality of her performance. Indeed this

VOL. IV.

portion of the book is its only trite feature ; for all the rest (not accounting sundry Norman anticipations by Mr. Turner likely to be generally familiar) is replete with novelty. From Paris the tourists went to Bayeux, and thence into Brittany, passing through Coutances, Arranches, Granville, Dol, St. Malo, Rennes, (the capital of Upper Bretagne) Plorhel, Hennebont, Auray, Vannes, Nantes, Angers, Saumur, and back to Paris by Tours and Orleans. During their Bretagne course, in particular, the country and its inhabitants offered a great deal worthy of notice ; and it is here that we feel most forcibly the power of interesting us possessed by the writer. Though somewhat out of order, therefore, we shall commence our selections with matter relative to the Bretons, and conclude with what we may have to say on the subject of Normandy. On the former topic Mrs. Stothard says—

“ We expect much pleasure from our projected excursion into Brittany. A grammar has been lent to me of the language of the people ; many French words have been ingrafted upon it ; but it appears, as far as I can judge, very like the Welsh, and I hear that the inhabitants of Brittany, and of Wales, understand each others' tongue.”

Her first impressions are not, however, of a pleasing sort. The next letter from Rennes proceeds—

“ Surely never were there worse roads, than those we have passed : if they be a specimen of what we have yet to come, I much doubt if we return home without being maimed. Sometimes a sudden jerk threw us from our seats, or tossed our heads against the roof of the carriage, which I never expected to get here without breaking down.”

“ I wrote my last letter to you from Arranches. We quitted that charming place at midnight, and breakfasted the next morning at Dol, en Bretagne, where an entirely new scene presented itself ; for the dirt and misery of the people exhibited a state of existence so comfortable and wretched, that I could scarcely fancy them the inhabitants of a civilized country. Dol is an ancient Gothic town ; the shops still remain in their original state ; their Gothic fronts, supported by short massy ornamented columns, that unite with each other, and form the streets into colonnades. We continued our route, and the carriage after passing through an arm of the sea entered St. Malo, a fine town, adjacent to the island of Jersey. It is surrounded by ramparts and strong towers, that still remain entire ; these were erected more than four hundred years since : they exhibit a very perfect specimen of the strongly fortified, and walled towns of former ages. The view from St. Malo is peculiar, and

striking ; little rocks and fortified islands appear in the midst of the sea, as far as the eye can distinguish distant objects. It was five o'clock in the afternoon, when we once more found ourselves in a comfortable inn at St. Malo ; and at three in the morning we again commenced another tiresome journey. At noon we passed the charmingly situated town of Hédé, where, upon a high rock rising amidst the finest woods, stand the remains of a castle, that formerly belonged to the Duchesse Anne. It was here that I may say, I had the first view of the people of Bretagne, in all their native wildness ; for the carriage rested in the market place, and gave me full time to consider the strange appearance of those who were to us a new race of beings. The wild look which more particularly characterises the men, is greatly increased by their wearing their hair long and loose ; they have a most uncivilized and rude air, and seem in a state of extreme poverty. A boy came up to the carriage, and appeared anxious to induce us to buy the fruit he held in a basket ; as we could not speak to him in his own language (the Patois), we gave him a small piece of money, intending to purchase some fruit ; he looked surprised, and would actually have emptied the whole contents of his basket in return, could we have taken it. I afterwards found, that this would have been less than the value of what we gave him, so extremely cheap are all kinds of fruit and provisions in Brittany ; but this is of little advantage to the people, their labour being paid in the same proportion. We continued our fatiguing journey from Hédé, and at five in the afternoon arrived at Rennes, after having had very little rest from travelling in such dreadful roads, during eight-and-forty hours.”

And again—

“ Since we have been at Rennes, we have remarked how much even the better class of people differ from the French ; they have not the least trait of their complaisance, but address you in a rough and brutal way. We have observed also their excessive dislike of the English ; and I cannot here omit relating a trifling incident that will serve to illustrate the character of gentlemen Bretons, for I believe they are all very much alike. I was yesterday making a sketch of Port St. George, an ancient gateway in the outskirts of the town, when several persons, habited like gentlemen, came up, and very unceremoniously placed themselves about me. I imagine they consider it impossible a foreigner could understand French ; for they were very personal in their remarks, and amused themselves with conjecturing who I might be. At last they agreed I was either Italian or English ; but from my dress they determined the latter, and because all Eng-

fishwomen were little creatures. This remark introduced a conversation upon the general character of our nation, which they closed: 'in good set terms,' without moving from their station. As I resolved to finish my drawing, I mustered up courage sufficient to continue it, without heeding their rudeness; till one of them, wishing to gratify his curiosity by staring me in the face, placed himself between me and the object I was delineating. I motioned with my hand for him to move; but this he did not, or would not understand. I then, in few words, civilly begged him to get out of the way. Immediately one of them exclaimed, 'She speaks French, do all the women in England speak French?' I took no notice in this, determined that I would not give up my English spirit, and be driven from my post by impertinence. These Breton gentlemen then entered into a fresh discourse upon French and English literature, and agreed that all we possessed was borrowed from the French, and that our best editions of Shakespeare, were a translation from Voltaire, who had given him beauties of his own, which the original never possessed. Whilst they were thus displaying their knowledge of these wonderful literary mysteries, a French officer came up, who knew these men, and seemed surprised at their intrusion. He begged them to remove, and politely apologized for their impertinence; assuring me that he was no Breton, and that if I knew the people as he did, I should find them the most brutal mannered, either in France, or in another country.

The excessive dislike the people of Brittany bear towards the English, is to be ascribed, in a principal degree, to the ideas they have formed, and yet entertain, respecting the conduct of England in the affair of the Breton Bay, where our administration, during the war a number of French emigrants to join the royalists. These unfortunate persons were all slaughtered in the course of that ensued, and the French government, always desirous of disseminating hatred against the people a hatred towards the English, caused a report to be circulated, that we had sent the emigrants to the Breton Bay, for the purpose of being there executed. I was walking yesterday with a friend in Rennes, when he stopped at the door of a shop, to examine a large map of Brittany. Mr. S.— looking for Anuray, pointed his finger along the map, till he reached the mark of the celebrated druidical remains; and, turning to me, said, 'There is Anuray.' An officer who chanced to be present at the moment, came up to him, and with a fierce look, placed his own finger upon the map, exclaiming, 'And there is Anuray!'"

The subsequent letter finishes the picture of Breton brutality. Going from Rennes to Anuray, Mr. S. writes—

"I continued our journey in this wildly desolate country, passing through thick woods of chestnut trees, with which Brittany is clothed. By the road's side, or in the open way wretchedly dirty looking women were crouching, with the distaff in their

hands, watching their cows and goats. The Bretons dwell in huts, generally built of mud; men, pigs, and children live all together, without distinction, in these cabins of accumulated filth and misery. The people are, indeed, dirty to a loathed excess, and to this may be attributed their unhealth, and even cadaverous aspect. Their manners are as wild and savage as their appearance: the only indication they exhibit of mingling at all with civilized creatures, is, that whenever they meet you, they bow their heads, or take off their hats in token of respect. I could not have supposed it possible that human nature endured an existence so buried in dirt, till I came into this province. The common people are apparently in the very lowest state of poverty. In some part of Brittany the men wear a goat skin dress, and look not unlike De Foe's description of Robinson Crusoe. The furry part of this dress is worn outside: it is made with long sleeves, and falls nearly below the knees. Their long shaggy hair hangs dishevelled about their shoulders, the head being covered by a broad flapped straw or heaver hat. Some few of the Bretons go without shoes or stockings: but the generally wear slippers, and thrust straw into them, to prevent the feet being rubbed by the pressure of the wood. You frequently see the women, both old and young, sauntering along the fields with the distaff, employed in spinning off the flax. The girls carry milk upon their heads, in a vessel of rather an elegant form, somewhat resembling the common Roman household vessels.

We continued travelling, in the hope of coming into some town or village, where we might obtain refreshment; for, in consequence of leaving Rennes so early, we had not breakfasted, and, unfortunately, my little basket, from neglect, was unsupplied. You may imagine, therefore, that the postillion's announcement of a town being in sight, was most agreeable intelligence to persons numbed with cold, and sick for want of food. Accordingly at noon we arrived at Ploëlan, to us the land of promise, and, like many such lands, afforded only disappointment, augmented by the comfortable hopes we had indulged. The horses, who, from custom, knew their resting-place, jogged on at a full trot, that was soon abated by the mud, through which they had to wade in passing down the village street. Ploëlan consists of a few miserable houses, inhabited by the pallid and dirty natives of Bretagne. Before their doors several children, covered only by a few tattered garments, were paddling for very sport, in the pool of slush that flooded the street; their savage manners and wretched looks, begrimed as they were with dirt, gave them the appearance of little imps appertaining to some lower world.

"We stopped at the entry of what is termed an inn, distinguished by the bush suspended over the door. At most of the inns in this country, they hang out such a signal, to denote that wine is sold within. This custom, now almost obsolete in England, reminds us of the old proverb, 'Good wine needs no bush;' but, if in the inns, they sell

only cyder, it is expressed in Brittany by hanging a few apples to the side of the bush. Here the horses were to rest two hours, during which time we proposed regaling ourselves with something like a dinner. Upon entering the inn, the first view of the interior made me start back; for I had never seen any thing at all similar to it before. Some faggots were blazing in a ruined chimney, by the side of which stood a miserable bed, where an old man sick of the gout was sitting up; the tortures of his disorder (the fit was upon him) gave to a naturally fierce and savage countenance, a malignant and dreadful expression; his complaint burst forth in accents of impatient extravagance, unchecked by the presence of strangers. The curtains of his bed hung in tattered rags, fastened by spindles, that craved about, and made their intricate web upon the pendant shreds of the decayed hangings. A slush pool, in the centre of the room, served the double purpose of a receiving basin for foul water, and a pond for the ducks, who enjoyed themselves by paddling about in it. A hen-roost stood above a ladder of raiment, beneath which a fowl was hatching her young upon a sort of dung-bill. To think of dining was impossible; we begged to be shewn into some other room, and inquired if they could give us bread and coffee. We were ushered into an apartment quite in character with the rest of the house. After insisting that the nearly broken down chairs might be wiped, (a caution very necessary before venturing to sit down,) we ordered a fire, and had at least the comfort of warming ourselves, for all hope of refreshment vanished as soon as the report appeared. The bread was full of sand, that gritted between the teeth, and so sour that I could not taste a second piece; the coffee bore no resemblance to that beverage, excepting the brown coloured tinge, but seemed a mixture of dirty water and sugar. We resigned it after the first taste, and paid for looking at such fare, as we could not be said to partake of it, the sum of four francs; while some French travellers below, were regaled in like manner for twelve sous each. One of these travellers had the charity to give me a bunch of grapes, which, with the addition of some chestnuts that Mr. S.— pulled from the trees as we journeyed on, was all the refreshment we could procure from fire in the morning till ten o'clock the same night when we got into Ploëmel. I cannot but think how useful a moral lesson a day's starvation would be to those who have plenty, and a daily meal; that they may experience the misery arising from the want of food, and learn to pity and feel for the needy who have none."

(To be continued.)

#### AMERICAN INDIANS.

"No chief pays any attention to reports, though they may carry with them the truth of truth. Until he is officially and in due

\* From a historical view of the Indian nations, containing an account of their manners. Read to the American Philosophical Society, by Mr. Hockewelder.

form apprised of the matter, he will, if questioned on the subject, reply that he had not heard it. It will, until then, be considered by him as the *song of a bird which had flown by*; but as soon as he is officially informed, through a string of wampum from some distant chief or leading man of the nation, whose situation entitles him to receive credit, he then will say: "I have heard it," and acts accordingly."

"Their belts of wampum are of different dimensions, both as to the length and breadth. White and black wampum are the kinds they use; the former denoting that which is good, as peace, friendship, good will, &c., the latter the reverse; yet occasionally the black also is made use of on peace errands, when the white cannot be procured; but previous to its being produced for such purpose, it must be daubed all over with chalk, white clay, or any thing which changes the colour from black to white. The pipe of peace, being either made of a black or red stone, must also be whitened before it is produced and smoked off on such occasions."

"A black belt with the mark of a hatchet made on it with red paint, is a war belt, which when sent to a nation together with a twist or roll of tobacco, is an invitation to join in a war. If the nation so invited smoke of this tobacco and say it smokes well, that they give their consent, and are from that moment allies. If however they decline smoking, all further persuasion would be of no effect; yet it once happened, that war messengers endeavoured to persuade and counsel a nation to accept the belt, by laying it in the shoulders or thigh of the chief, who, however, after shaking it off without touching it with his hands, afterwards, with a stick, threw it after them, as if he threw a snake or rod out of his way."

"The Indians judge with calmness on all occasions, and decide with precision, or endeavour so to do, between an accident and a sinful act:—the *first* (they say) they are all able to commit, and therefore it ought not to be noticed, or punished;—the *second* being wilful or premeditated act, committed with bad design, ought on the contrary to receive due punishment."

"To illustrate this subject, I shall relate few of the cases of this description which have come within my knowledge. One morning early, an Indian came into the house of another who was yet asleep, asking for the loan of his gun for a morning hunt, his own being out of repair; the owner readily consented, and said: "as my gun is not loaded, you will have to take a few balls out of your pouch!" In taking the gun down, it, however, by some accident went off, and lodged the contents in the owner's head, who was still lying on the bed, and now expired. The gun, appeared, was loaded, though unknown to him, and the lock left in such a condition at by a touch it went off. A cry was heard from all sides in the house: O! the *accident*! for such it was always considered to have been, and was treated as such."

"A hunter went out to kill a bear, some of those animals having been seen in the

neighbourhood. In an obscure part of a wood, he saw at a distance something black moving, which he took for a bear, the whole of the animal not being visible to him; he fired, and found he had shot a black horse. Having discovered the mistake, he informed the owner of what had happened, expressing at the same time his regret that he was not possessed of a single horse, with which he could replace the one he had shot. What! replied the Indian whose horse had been killed, do you think I would accept a horse from you, though you had one to give, after you have satisfied me that you killed mine by accident? No, indeed! for the same misfortune might also happen to me."

"An aged Indian who had gone out to shoot a turkey, mistook a black hog in the bushes for one of those birds, and shot him; finding out by enquiry to whom the hog belonged, he informed the owner of the mistake he had made, offering to pay for the hog; which the other, however, not only would not accept of, but having brought the meat in, gave him a leg of the animal, because he thought that the unfortunate man, as well on account of his disappointment, in not feasting on turkey as he expected soon to do when he shot the hog, as for his honesty in informing of what he had done, was entitled to a share of what he had killed."

"Marriages among the Indians are not, as with us, contracted for life; it is understood on both sides that the parties are not to live together any longer than they shall be pleased with each other. The husband may put away his wife whenever he pleases, and the woman may in like manner abandon her husband. Therefore the connexion is not attended with any vows, promises, or ceremonies of any kind. An Indian takes a wife as it were on trial, determined, however, in his own mind, not to forsake her, if she behaves well, and particularly if he has children by her. The woman, sensible of this, does on her part every thing in her power to please her husband, particularly if he is a good hunter or trapper, capable of maintaining her by his skill and industry, and protecting her by his strength and courage."

"When a marriage takes place, the duties and labours incumbent on each party are well known to both. It is understood that the husband is to build a house for them to dwell in, to find the necessary implements of husbandry, as axes, hoes, &c. to provide a canoe, and also dishes, bowls, and other necessary vessels for house-keeping. The woman generally has a kettle or two, and some other articles of kitchen furniture, which she brings with her. The husband, as master of the family, considers himself bound to support it by his bodily exertions, as hunting, trapping, &c.; the woman, as his *help-mate*, takes upon herself the labours of the field, and is far from considering them as more important than those to which her husband is subjected, being well satisfied that with his gun and traps he can maintain a family in any place where game is to be found: nor do they think it any hardship imposed upon them; for they themselves say, that while their field labour employs them at

most six weeks in the year, that of the men continues the whole year round."

"When a couple is newly married, the husband (without saying a single word upon the subject) takes considerable pains to please his wife, and by repeated proofs of his skill and abilities in the art of hunting, to make her sensible that she can be happy with him, and that she will never want while they live together. At break of day he will be off with his gun, and often by breakfast time return home with a deer, turkey, or some other game. He endeavours to make it appear that it is in his power to bring provisions home whenever he pleases, and his wife, proud of having such a good hunter for her husband, does her utmost to serve and make herself agreeable to him."

"The more a man does for his wife, the more he is esteemed, particularly by the women, who will say: "This man surely loves his wife." Some men at their leisure hours make bowls and ladders, which, when finished, are at their wives' disposal."

"In the year 1762, I was witness to a remarkable instance of the disposition of Indians to indulge their wives. There was a famine in the land, and a sick Indian woman expressed a great desire for a mess of Indian corn. Her husband having heard that a trader at Lower Sandusky had a little, set off on horseback for that place, one hundred miles distant, and returned with as much corn as filled the crown of his hat, for which he gave his horse in exchange, and came home on foot, bringing his saddle back with him."

(To be continued.)

#### KNICKERBOCKER'S HISTORY OF NEW YORK.

(Concluded.)

The second extract to which we have alluded, is the following description of the Dutch government in the city which they had built in America.

In treating of the early governors of the province, I must caution my readers against confounding them, in point of dignity and power, with those worthy gentlemen, who are whimsically denominated governors in this enlightened republic—a set of unhappy victims of popularity, who are in fact the most dependent, hen-pecked beings in the community: doomed to bear the secret goadings and corrections of their own party, and the sneers and revilings of the whole world beside.—Set up, like geese at Christmas holidays, to be pelted and shot at by every whipster and vagabond in the land. On the contrary, the Dutch governors enjoyed that uncontrolled authority, vested in all commanders of distant colonies or territories. They were in a manner absolute despots in their little domains, lordling it, if so disposed, over both law and gospel, and accountable to none but the mother country; which it is well known is astonishingly deaf to all complaints against its governors, provided they discharge the main duty of their station—squeezing out a good revenue. This hint will be of importance, to prevent my readers from being seized with doubt and in-

credulity, whenever, in the course of this authentic history, they encounter the uncommon circumstance of a governor acting with independence, and in opposition to the opinions of the multitude.

To assist the doubtful Wouter in the arduous business of legislation, a board of magistrates was appointed, which presided immediately over the police. This potent body consisted of a schout or bailiff, with powers between those of the present mayor and sheriff—five burgemeesters, who were equivalent to aldermen, and five schepens, who officiated as scrubs, subdevis, or bottle-holders to the burgemeesters, in the same manner as do assistant aldermen to their principals at the present day; it being their duty to fill the pipes of the lordly burgemeesters—hunt the markets for delicacies for corporation dinners, and to discharge such other little offices of kindness as were occasionally required. It was, moreover, tacitly understood, though not specifically enjoined, that they should consider themselves as butts for the blunt wits of the burgemeesters, and should laugh most heartily at all their jokes; but this last was a duty as rarely called in action in those days as it is at present, and was shortly remitted, in consequence of the tragical death of a fat little schepen—who actually died of suffocation in an unsuccessful effort to force a laugh at one of burgemeester Van Zandt's best jokes.

"In return for these humble services, they were permitted to say *yes* and *no* at the council board, and to have that enviable privilege, the run of the public kitchen—being graciously permitted to eat, and drink, and smoke, at all those snug junketings, and public gormandizings, for which the ancient magistrates were equally famous with their modern successors. The post of schepen, therefore, like that of assistant alderman, was eagerly coveted by all your burghers of a certain description, who have a huge relish for good feeding, and an humble ambition to be great men, in a small way—who thirst after a little brief authority, that shall render them the terror of the almshouse, and the bride-well—that shall enable them to lord it over obsequious poverty, vagrant vice, outcast prostitution, and hunger-driven dishonesty—that shall give to their beck a hound-like pack of catch-poles and bun-bailiffs—tenfold greater rogues than the culprits they hunt down!—My readers will excuse this sudden warmth, which I confess is unbecoming of a grave historian—but I have a mortal antipathy to catch-poles, bun-bailiffs, and little great men.

The ancient magistrates of this city corresponded with those of the present time no less in form, magnitude, and intellect, than in prerogative and privilege. The burgomasters, like our aldermen, were generally chosen by weight—and not only the weight of the body, but likewise the weight of the head. It is a maxim practically observed in all honest, plain thinking, regular cities, that an alderman should be fat—and the wisdom of this can be proved to a certainty. 'That the body is in some measure an image of the mind, or rather that the mind is moulded to

the body, like melted lead to the clay in which it is cast, has been insisted on by many philosophers, who have made human nature their peculiar study—For as a learned gentleman of our own city observes, 'there is a constant relation between the moral character of all intelligent creatures, and their physical constitution—between their habits and the structure of their bodies.' Thus we see, that a lean, spare, diminutive body, is generally accompanied by a petulant, restless, meddling mind—either the mind wears down the body, by its continual motion; or else the body, not affording the mind sufficient house-room, keeps it continually in a state of fretfulness, tossing and worrying about from the uneasiness of its situation. Whereas your round, sleek, fat, unwieldy periphery is ever attended by a mind like itself, tranquil, torpid, and at ease; and we may always observe, that your well fed, robust burghers, are in general very tenacious of their ease and comfort; being great enemies to noise, discord, and disturbance—and surely none are more likely to study the public tranquillity than those who are so careful of their own. Who ever hears of fat men heading a riot, or herding together in turbulent mobs?—no—no—it is your lean, hungry men, who are continually worrying society, and setting the whole community by the ears.

"The divine Plato, whose doctrines are not sufficiently attended to by the philosophers of the present age, allows to every man three souls—one immortal and rational, seated in the brain, that it may overlook and regulate the body—a second consisting of the surly and irascible passions, which, like belligerent powers, lie encamped around the heart—a third mortal and sensual, destitute of reason, gross and brutal in its propensities, and enchaind in the belly, that it may not disturb the divine soul by its ravenous howlings. Now, according to this excellent theory, what can be more clear, than that your fat alderman is most likely to have the most regular and well-conditioned mind? His head is like a huge spherical chamber, containing a prodigious mass of soft brains, whereon the rational soul lies softly and snugly couched, as on a feather bed; and the eyes, which are the windows of the bed-chamber, are usually half closed, that its slumbering may not be disturbed by external objects. A mind thus comfortably lodged, and protected from disturbance, is manifestly most likely to perform its functions with regularity and ease. By dint of good feeding, moreover, the mortal and malignant soul, which is confined in the belly, and which, by its raging and roaring, puts the irritable soul in the neighbourhood of the heart in an intolerable passion, and thus renders men crusty and quarrelsome when hungry, is completely pacified, silenced, and put to rest—whereupon a host of honest good-fellow qualities and kind-hearted affections, which had lain perdue, slily peeping out of the loop-holes of the heart, finding this Cerberus asleep, do pluck up their spirits, turn out one and all in their holiday suits, and gambol up and down the

diaphragm—disposing their possessor to laughter, good humour, and a thousand friendly offices towards his fellow mortals.

"As a board of magistrates, formed on this model, think but very little, they are the less likely to differ and wrangle about favourite opinions—and as they generally transact business upon a hearty dinner, they are naturally disposed to be lenient and indulgent in the administration of their duties. Charlemagne was conscious of this, and, therefore, (a pitiful measure, for which I can never forgive him) ordered in his carucials, that no judge should hold a court of justice, except in the morning, on an empty stomach: a rule which, I warrant, bore hard upon all the poor culprits in his kingdom. The more enlightened and humane generation of the present day have taken an opposite course, and have so managed, that the aldermen are the best fed men in the community; feasting lustily on the fat things of the land, and gorging so heartily oysters and turtles, that in process of time they acquire the activity of the one, and the form, the waddle, and the green fat of the other. The consequence is, as I have just said, these luxurious feastings do produce such a dulcet equanimity and repose of the soul, rational and irrational, that their transactions are proverbial for unvarying monotony—and the profound laws, which they enact in their dazing moments, amid the labours of digestion, are quietly suffered to remain as dead letters, and never enforced when awake. In a word, your fair round-bellied burgomaster, like a full-fed mastiff, dozes quietly at the house-door, always at home, and always at hand to watch over his safety—but as to electing a lean, meddling candidate to the office, as has now and then been done, I would as lief put a greyhound to watch the house, or a race horse to drag an ox-wagon.

"The burgomasters, then, as I have already mentioned, were wisely chosen by weight, and the schepens, or assistant aldermen, were appointed to attend upon them, and help them eat; but the latter, in the course of time, when they had been fed and fattened into sufficient bulk of body and drowsiness of brain, became very eligible candidates for the burgomasters' chairs, having fairly eaten themselves into office, as a mouse eats his way into a comfortable lodgment in a goodly, blue-nosed, skimmed milk, New-England cheese."

We should have been glad to prolong these spirited examples; but the doings of Walter the Doubter, William the Testy, and Peter the Headstrong, the three Dutch governors of New Amsterdam, would lead us into a field so wide that it would expose our review, comparatively, to the same objection of prolixity which we have alledged against the work in hand. To avoid this fault we shall conclude, with one quotation more, from the finale, viz. an account of the terms upon which the city ultimately surren-

dered to its besiegers, thereby terminating the first dynasty.

While all these woful struggles and dissensions were prevailing in the unhappy city of New Amsterdam, and while its worthy but ill-starred governor was framing the above quoted letter, the English commanders did not remain idle. They had agents secretly employed to foment the fears and clamours of the populace; and moreover circulated far and wide, through the adjacent country, a proclamation, repeating the terms they had already held out in their summons to surrender, and beguiling the simple Dutchers with the most crafty and conciliating professions. They promised that every man who voluntarily submitted to the authority of his British majesty, should retain peaceable possession of his house, his vrouw, and his cabbage garden. That he should be suffered to smoke his pipe, speak Dutch, wear as many breeches as he pleased, and import bricks, tiles, and stone jugs from Holland, instead of manufacturing them on the spot. That he should on no account be compelled to learn the English language, or keep accounts in any other way than by casting them up on his fingers, and chalking them down upon the crown of his hat; as is still observed among the Dutch yeomen at the present day. That every man should be allowed quietly to inherit his father's hat, coat, shoe-buckles, pipe, and every other personal appendage; and that no man should be obliged to conform to any improvements, inventions, or any other modern innovations; or on the contrary should be permitted to build his house, follow his trade, manage his farm, rear his hogs, and educate his children, precisely as his ancestors did before him since time immemorial—Finally, that he should have all the benefits of free trade, and should not be required to acknowledge any other saint in the calendar than St. Nicholas, who should thenceforward, as before, be considered the tutelar saint of the city.

These terms, as may be supposed, appeared very satisfactory to the people, who had a great disposition to enjoy their property unmolested, and a most singular aversion to engage in a contest, where they could gain little more than honour and broken heads—the first of which they held in philosophic indifference, the latter in utter detestation. By these insidious means, therefore, did the English succeed in alienating the confidence and affections of the populace from their gallant old governor, whom they considered as obstinately bent upon running them into hideous misadventures; and did not hesitate to speak their minds freely, and abuse him most heartily—behind his back.

Like as a mighty grampus, who, though assailed and buffeted by roaring waves and brawling surges, still keeps on an undeviating course; and though overwhelmed by boisterous billows, still emerges from the troubled deep, spouting and blowing with tempestuous violence, so did the indefatigable Peter pursue, unwavering, his determined career, and rise, contemptuous, above the clamours of the rabble.

*A Day in Autumn; a Poem, by Bernard Barton.* London and Woodbridge, 1820. Small 4to. pp. 31.

In the Literary Gazette of the 22d of last April, we introduced this author to our readers as a Quaker bard of no mean pretensions. Slight as his new work is, in our opinion it will enhance his poetical fame: for it displays many beauties of a fine order, and is stamped throughout with traits of genius a like remote from extravagance and mediocrity. Amiable feeling, a pure sense of nature, a heart right toned, and a head well regulated, are visible in every verse; and it is to us a sincere gratification to find the higher conceptions of the muse thus linked with the better principles of morality; harmony and grace enlisted in the cause of virtue, and our pleasures from an effusion of fancy, not too dearly purchased by the consciousness that while we are delighting our imaginations we are tainting our minds.

But the philanthropy and tenderness, as well as the skill and talent of the author, will better appear from his composition than our commendation; and we proceed to lay specimens of the *Day in Autumn* before the public.

In a dedication to Mr. Southey, Mr. Barton states his view of the subject, and elsewhere, in the poem itself, further says:

I took my pen up, in no formal fit,  
The feelings of a few bright hours to scan;  
And as they rise I trace their course as best I can.

There is however a regular, and what is preferable, a very sweet invocation, with which he commences; and we shall produce it as a truly poetical description of the season which gives the poem its name.

Autumn! soul soothing season, thou who spreadest

Thy lavish feast for every living thing,  
Around whose leaf-strew'd path, as on thou treadest,

The year its dying odours loves to fling,  
Their last faint fragrance sweetly scattering:—  
O! let thy influence, meek, majestic, holy,  
So consciously around my spirit cling,

That its fix'd frame may be, remote from folly,

Of sober thought combin'd with gentle melancholy.

If, in the morning of my life, to Spring

I paid my homage with a heart elate;  
And with each fluttering insect on the wing,

Or small bird, singing to his happy mate,  
And Flora's festival, then held in state;—

H! joyous sympathy with these was mine,  
O! still allow me now to dedicate

To Thee a loftier song:—that tone assign  
Unto my murmuring lyre, which Nature gives to thine.

A tone of thrilling softness, now, as caught  
From light winds sweeping o'er a stubble field;—

And, now and then, be with those breezes brought

A murmur musical, of winds conceal'd  
In coy recesses, by escape reveal'd:—

And, ever and anon, still deeper tone  
Of winter's gathering dirge, at distance peal'd,  
By harps and hands unseen; and only known

To some enthusiast's ear when worshipping alone.

No more of invocation! Bright the day

Arose; as if the glorious sun were bent,  
(Like some proud monarch, whose declining sway

Is still majestic and magnificent.)  
On once more filling his own ornament

With undiminish'd splendour:—

The last image is grand, and indeed the whole passage beautiful, in spite of the expressions upon which we have passed the censure of *italics*.

The kind-heartedness of the writer shines in a comment upon the scriptural account of the woman who poured ointment on the head of Christ.

O! how that action, 'mid the chronicle  
Of darkest crimes, with which the chapter teems,

Shines forth, with lustre inexpressible,  
Uncertainly brightness shedding from its beams,

All unclipp'd of its gentle glory seems  
By the dense clouds that wrap our lower sphere;

We turn to it, from those more painful themes,  
[SCARLET's treachery, and PETER's fear,

The Priest's hypocrisy, the Soldier's cruel sneer;—

From such we turn to it, as to a thing  
Gentle, compassionate, pure, holy, good!

And the heart's better feelings, as they cling  
Unto its memory, lead us, as they should,

To genuine virtue's most congenial mood;  
Not taught by speculative creeds, which draw

The mind's attention from its heavenly food;—  
We feel this truth impress'd, with hallow awe,  
That LOVE is in itself fulfilment of God's law!

Tell me, thou strenuous advocate of creeds,  
Dogmas, and systems; overlooking still  
Those milder charities, and christian deeds  
Without which faith is dead:—with all thy skill

Know'st thou not this—the LETTER can but kill,

The SPIRIT giveth life?—O! far above  
The proudlest theoreticians, does he fulfil

The precepts of our faith, whose actions prove  
That he has learnt aright this truth—that God

is LOVE!

But to return to the *Day*: the following thought, if not now, is prettily turned:

The bright sun threw his glory all around,  
And then the balmy, mild, autumnal breeze  
Swept, with a musical, and fitful sound,  
Among the fading foliage of the trees.

And, now and then, a playful gust would seize  
Some falling leaf, and, like a living thing  
Which fits about wherever it may please,  
It floated round in many a airy ring.

'Till on the dewy grass it lost its transient wing.  
The love of poetry—its means and ends, are well pourtrayed.

The Muses are not innately oppos'd  
To pure religion:—witness Cowper's lyre;  
And those more awful visions once disjoin'd  
To him, the loftiest of our tuneful choir,  
Scrapp'd Milton, whose lips felt the fire  
Caught from the altar's live coal; prompt-  
ed whence,  
In verse which, although numerous, could not  
tire,

He sang of themes beyond our finite sense,  
And pour'd his heavenly song with holy elo-  
quence.

Not that a Poet by his craft is bound  
To be for ever harping heavenly themes;  
Though palms unfading grow on holy ground,  
And at their feet are everlasting streams,  
And many a spot with holiest vision teems,  
Replete with inspiration: still, we may  
Be more familiar with them than beset  
True reverence; and unguardedly betray  
The cause we wish to serve by our unwearied lay,  
Yet he who scans aright the end for which  
The gift of song, if genuine, was bestow'd,  
Will ever strain its most commanding pitch  
In virtue's praise; and seek to strew the  
road

That leads to her immortal, blest abode;  
With amaranthine flowers:—even when he  
plays  
With lighter theme, in seeming mirthful  
mode,

Or nature's loveliness in song pours, trays,  
His end and aim through all should be the Gi-  
ver's praise,

And inexhaustible the beauties are  
Of this fair universe.—The boundless main;  
Heaven's out-stretch'd cope, begem'd with  
many a star;

And earth's rich loveliness,—the ample  
plain,  
And stream which marks it like a silver vein;  
Mountains, and forest, lake, and water-fall;  
Can minstrel e'er want subject for his strain,  
While such display their charms so pro-  
digious!

Or how, while singing them, forget who form'd  
them all?  
O Foesy! thou dear delightful art!  
Of sciences—by far the most sublime;  
Who, acting rightly thy immortal part,  
Art virtue's handmaid, censor stern of  
crime,

Nature's high priest, and chronicler of time;  
The nurse of feeling; and the interpreter  
Of purest passion:—who, in manhood's  
prime,

In age, or infancy, alike canst stir  
The heart's most secret thoughts.

The mind thus alive to the best purposes  
of poetry, cannot be insensible to the charms  
of creation: the author glows in their des-  
cription.

—We drove  
Through bowering lanes; their lofty trees  
beneath,  
Whose leaves were ting'd with beauty far  
above  
Spring's gayest hues, or brightest freshest  
green:  
Their blending shades of every tint were seen;  
Pale amber, half transparent in the ray  
Of the bright sun; while others, in his sheen,  
Assum'd more gorgeous colours; and others—  
grey,  
Wither'd, and lifeless now, bestrew'd our nar-  
row way.

Nor was the distant scenery aught surpass'd

By nearer objects; there, expanding wide,  
And by unclouded sunshine brightly glass'd,  
Flow'd, Orwell! thy serenely rippling  
tide:

Hemm'd in by gently sloping on every side,  
Whose tufted woods upon its margin break,  
It more resemble'd, as by us descried,  
Some quietly reposing inland lake,  
Than ocean's briny branch, which ebb and flow  
o'erlake.

The farewell to the river Orwell, which  
seems endeared by early recollections, is  
also natural and affecting.

Farewell! then, and for ever! though thou  
must  
Be with me as a thing that cannot die,  
Until my memory shall resign its trust  
Of what life's brightest moments can sup-  
ply,

Hope, friendships, love, that charm'd me  
and pass'd by:  
Though far apart, perhaps, we may not  
sever,

And sometimes I may gaze, with pensive eye,  
Upon thy winding shores; yet never, never,  
Canst thou re-call again enjoyments fled for  
ever!

The sequent lines refer, we presume,  
to some of the friendly party whose amiable  
dispositions and cultivated tastes, induce  
them to regard elegant literature and its  
votaries, with feelings of a more liberal cast  
than the society has credit for.

And now our morning's ride is ended: past  
The hour of dinner,—round us fathers ere:  
And he who frames this legend must, at last,  
Of the kind circle round him take his leave.  
Nor would he foolishly repine, or grieve,  
Though some there be whom he may meet  
no more;

Even should it prove so, why should this be-  
rieve

His breast of some fond thoughts unknown  
before,  
Which friends till then unmet have added to its  
store?

But we have ponched beyond what  
is fair upon so small a manor of the  
Muse; and must depart, especially as

The day is over:—it is night, dark night!  
But such as should succeed a day so fair,  
Nought is there in its darkness to affright;  
No gusty winds of rising storms declare,  
But grateful silence fills the dewy air.

Even such a night as now with voiceless  
spell

Has gather'd round me: can I then forbear,  
Ere to my theme I bid a last farewell,  
The present hour to paint; NIGHT's calm  
delights to tell?

Soul soothing season! period of repose!  
Or introverted thought, which day debars;  
Can language paint, can poetry disclose,  
The magic of thy silence, dews, and stars?

When the loud mirth of day no longer mars  
Our better feelings with its empty sound;  
When we forget, awhile, the cruel jars  
Our souls in worldly intercourse have  
found,

How welcome are thy shades, with peaceful  
quiet crown'd!

One topic more, Still Night! will yet intrude  
Upon my serious thought, while hymning  
Thee:—

Thou art the emblem, type, similitude,  
Of silence yet more awful; although we  
Are loath the approach of Death's dark night  
to see!

Father of mercies! THOU whose goodness  
gave

Thy Son below'd, man's sacrifice to be,  
Grant that in life's last hour my soul may  
crave,

Nor crave in vain, His Love to light me  
through the Grave;

Trusting that our extracts have more  
than justified our praise, we once more  
take leave of the author, whom we con-  
sider to be an ornament and honour to  
the Society of Friends, of which he is a  
member.

#### ROYAL IRISH ACADEMY: *Hebrew Medal.*

The Royal Irish Academy have just pub-  
lished the second part of the 13th vol. of their  
Transactions, which contains the following  
articles. SCIENCE.—On Voltaic Electric-  
ity, by the Rev. T. R. Robinson; on the  
Changes of the Human Skeleton at different  
periods of Life, by W. Wallace, M.D.;  
Method of computing Astronomical Refrac-  
tions near the Horizon, by Professor Brinkley;  
the Inscription of a regular Polygon  
of 17 sides in a Circle, by Rev. Fra-  
s. Sadler; Method of correcting the approx-  
imate Elements of the Orbit of a Comet, by  
Professor Brinkley. POLITE LITERATURE.  
—Essay on the Life and Writings of Ossian,  
by an Analysis of his Cynegetics, by the  
Rev. W. H. Drummmond. ANTIQUITIES.—  
Remarks on a Brass Medal of our Saviour,  
found at Cork, by H. J. M. Mason; Con-  
jectures on the Origin of the Oriental Man-  
ner of Counting from Right to Left, by A. S.  
Sankey; Observations which accompanied a  
Hebrew Medal submitted to the Inspec-  
tion of the Academy, by the Rev. R. Walsh;  
Description of a Rich and Ancient Box,  
containing a Latin Copy of the Gospels,  
found on a mountain in the Co. Tipperary,  
by H. M. Maden; Description of a Drawing  
in the Red Book, of the Exchequer of Ire-  
land, by the same.

It may be remembered, that some time  
ago public mention was made of the Hebrew  
medal above alluded to, as found near Cork,  
the hypothesis raised upon which was, that it  
was coeval with the beginning of the Chris-  
tian era; the head being a bust of our  
Saviour, and the obverse containing an in-  
scription suitable to a record of that des-  
cription. We have recently had an oppor-  
tunity of examining the similar, but more  
perfect medal of the same kind, of which  
the account has been laid before the Royal  
Irish Academy by Dr. Walsh; and as these  
works are extremely curious, we trust that a  
brief notice of this specimen may be accept-  
able to others besides our numismatological  
readers. It was obtained at Rostock, in  
Lower Saxony, by Dr. Walsh, from a Polish  
Jew, who prized it as an ancient Christian  
amulet; and sold it as a talisman, more pre-  
cious to a Christian than to a Hebrew.  
It seems to be a duplicate of the Cork medal;  
but the profile is finer, and the legend much

plainer. It is distinctly as follows; (we quote the Hebrew characters in English,) *Meshiach malek be heshlam veor neadam gnashui chai. The Messiah has reigned; he came in peace; and being made the light of man, fireth.* No vowel points are discernible. The expression of the countenance is beautiful, and the character so pure as to establish a very high state of the arts at the period the die was struck. It is quite the Raphael or Carlo Dolce portrait of Christ. The metal is of a strange mixed composition, paler than common brass, and in colour resembling pure gold, but its specific gravity is infinitely less than even brass; zinc seems a constituent part. It is the most sonorous coin we ever met with, which is probably owing to the presence of a considerable proportion of tin, which gives the sonorous quality to the bell metal. Similar medals were not uncommon during the middle ages. Fac similis of seven are handed down by authors, between 1605 and 1702; and five originals are known to be in collections at this day; viz. Mr. Corlett's, at Cork, of brass; Mr. Symond's, Ensham, of silver; Dr. Clerk, of Millbank, one of brass, and another of copper, and our present subject, belonging to the Rev. R. Walsh, of Glasnevin. By comparing the plates and these medals, six different impressions are made out. Most of them are, we make no doubt, the fabrication of the latter ages; but we are not sure, that we ought to question the great antiquity of others. An *aleph* on the right of the bust in Mr. Walsh's, has been construed to be the date of the coin, and to signify, that it was struck the year after the resurrection, to commemorate that miraculous event. This proposition we leave for the learned in such matters to determine; and content ourselves with observing, that the execution is admirable, and corresponds better with the age of Agrippa, than with the declining arts from Adrian to Leo. X.

### Gwine and Solitaires.

OR AFTER DINNER CHIT-CHAT.

By a Cockney Grey Beard.

#### CHAPTER IX.

##### Old Slaughter's.

The Plantagenets and the Tudors, ages since, have passed away—the Stuarts too have gone to their rest, whilst the “new family,” as I remember them called, so imperceptibly, yet so unremittently does the sleepless plodder TIME, turn over year by year a new leaf in fate's volume, are already looking old and congenial upon the pages of British history.

Yes! when we look back to the first George—who the Hanoverians loved, and his adopted subjects revered, regretting only, after a long acquaintance, that he was not a Briton born, and pass to his royal son, who we remember him, feel onwards near approaching that brink, beyond which they have sunk—never more to return.

He, the third monarch of that illustrious house, whose lamp of life was lighted but a short season before Old Ephraim's, is quite burnt out, though lengthened to nature's last

glimmering flame; leaving a sweet odour, that invites us to prepare. And who that knew thy virtues, GEORGE! might not exclaim—O! that a life as pure as thine, thou best of kings, were mine!

It was but yesterday, the anniversary of thy once happy jubilee, I passed thy hallowed court. The creeping shrub that I have watched full many a season up-clinging to thy palace wall, had changed its green leaves to the deep raby and other gem-like hues, various as the painted casements of an ancient church, and seemed a memento of defunct majesty.

There, in thy palace garden, a solitary harp-binger of winter sat and sung, whilst the sudden gust hurled the dying leaves from off thy sanctuary. Sweet Robin! I never heard thy plaintive note chaunted so sad and mournfully.

The thundering of the drums meanwhile reverberated from old St. James's tower; 'twas like the sounds of former days. The loud word of command, was wafted to me in the northern blast. I heard the close heavy tramp of troops in the tower-court. The sound was like the ghosts of grenadiers that erst “carried arms,” dividing off, the loyal centinels—the old king's guard.

Spring shall return, and April showers the creeping shrub shall die a livelier green. The plaintive Robin may tune a sweeter note, and meet another mate; but thy kingly countenance shall never more be seen to smile benignantly from thy crimson throne.

The day cleared up. I rambled onward to see what's going on in the improving way of art, and stood in front of Gibbs's lofty pile, St. Martin's church. Here, said I, when I am gone, will others see its stately portico, rescued from its hiding place, the proud termination of a vista of magnificent dwellings.

Old dusky St. Martin's-lane! and yet it was but t'other day a new street of some consideration; for many a man of rank and condition resided here. It seems but a span beyond the date of some I remember in my infancy, when it was St. Martin's in the Fields.

The younger Richardson told me his grandfather saw Old Stone<sup>a</sup> buried in funeral pomp in that very church,<sup>b</sup> nearly half a century before the architect of the present structure was born.

Richardson had a multitude of sketches that were his father's, old Jonathan's Richardson. Among these were many a curious bit long since perished, no doubt, but which would now fetch a topping price, if brought to the hammer; and raise a mighty

<sup>a</sup> Old Stone was master mason to King Charles I. One of his sons executed his monument, which was a bas-relievo, with tools and implements of sculpture, admirably carved in marble. He and his two sons manufactured more tombstones than any three that England has produced. Old Stone died in 1641.

<sup>b</sup> Old St. Martin's church, built in the time of Henry VIII. was pulled down in 1721.

<sup>c</sup> Jonathan Richardson, a distinguished painter, and author of a learned treatise on that art; the “reading of which,” said the great Reynolds, “induced me to become a painter.”

hurly-burly among the remnant of the connoisseurs and dilettanti, who venture their venerable faces, muffled in fur, as you have seen, trotting against an eastern wind to a March sale.

He had a common-place book too, filled with many a curious scrap, dearly treasured up by this affectionate son.<sup>d</sup> This the senior Richardson had often exhibited at the club at Old Slaughter's. He had crowded it with notes of many matters, apparently of no import to any but himself. The good old man, I've heard my uncle Zachary say, fancied every one equally far gone in the collecting mania; hence he sometimes interrupted better conversation, which made Hogarth impatient, and utter a thousand pishes and phaw's; for “though he loved the man,” as he used to say, “he hated the connoisseur.”

There is a curious story of Jonathan Richardson and Harry Fielding,<sup>e</sup> which I have heard my uncle relate, but it is too long for this chapter. It was about Richardson's notes to Milton, which he used to read to all comers at Old Slaughter's,<sup>f</sup> Button's,<sup>g</sup> and Will's.<sup>h</sup> He seldom rambled city-ways, though sometimes he stepped in at the Rainbow,<sup>i</sup> where he counted a few worthies, or looked in at Dick's<sup>k</sup> and gave them a note or two. He would not put his foot on the threshold of the Devil's,<sup>l</sup> however, for he thought the sign profane; but more of this hereafter. Fielding would run a furlong to escape him; he called him Doctor Fidget.

George Lambert,<sup>m</sup> the landscape painter, I have heard my great uncle say, was the merriest of fellows, without the least buffoonery. He was frolicsome as Rochester, and satirical as Shaftsbury, although he never disgraced himself by obscenity like the one, nor made enemies like the other through ill nature or malice. He could be jocose with his inferiors without vulgarity; differing in

<sup>d</sup> It is said that the father and son, both most amiable men, sketched the countenance of each other, however slightly, every day; and this eccentric, and rare instance of affection, was continued to the father's death.

<sup>e</sup> Henry Fielding (properly *Fiddling*) the celebrated author of *Tom Jones*.

<sup>f</sup> Old Slaughter's coffee-house and hotel, St. Martin's-lane.

<sup>g</sup> Button's, coffee-house, formerly in Great Russell-street, Covent Garden.

<sup>h</sup> Will's coffee-house, near the same spot, both frequented by Pope, Swift, Steele, Addison, Arbuthnot, and other great wits.

<sup>i</sup> The Rainbow coffee-house, celebrated by Dr. Johnson's coterie, near the Temple Gate.

<sup>k</sup> Dick's coffee-house, nearly adjoining.

<sup>l</sup> The Devil tavern, formerly by the Temple.

<sup>m</sup> George Lambert, the best landscape painter of his day, and principal scene-painter of Covent Garden Theatre. He was the founder of the celebrated beef-steak club, the first members of which held their social meetings in the painting room of the theatre. The club was subsequently held in an apartment in the old playhouse; then removed to the Shakespeare tavern; thence again to the theatre; and being burnt out in 1812, the meetings adjourned to the Bedford. At present the celebrated club hold their convivial meetings at the English Opera House, in the St.

that too with some distinguished wisps his predecessors, and others his contemporaries; whilst he was delightfully social with his equals, and perfectly easy with his superiors in rank. His manners, according to my uncle's testimony, whose discernment was seldom called in question, were most engaging. Indeed I can readily believe all I have heard in Lambert's praise, for he must have possessed extraordinary powers of fascination that could draw the nobility who were used to eat their macaroni off gorgeous plate, to come to the scene room of Covent Garden to partake of a chop or steak, cooked on the top of a German stove.

He ruled at Old Slaughter's, a jovial king; and the landlord, himself a character, yielded to all the waggeries of him and his colleagues, the members of the club, composed of literati, painters, wits, antiquaries, and virtuosi, who had met there twice a week from the opening of the house. The sagacious tavern keeper! his yielding manners brought custom to the bar. Besides using a hamper of claret, burgundy, and old rhenish had "mine host" sent home to noble peers and men of high sounding title, name, and office, brought thither to taste his prime stock by the gay founder of the *Beef Steak Club*.

I could spin out a volume of stories of this club, related by my great uncle, which would amuse my readers, could I tell them with his naïveté. How many times he has made us laugh at the bickerings between Georgy, as he called him, and old "Grecian,"<sup>a</sup> Old Slaughter's cook. His manner of relating the broiling scene was so delectable, that Garrick, who had listened to it many years after the death of the principal parties, nearly choked my lord bishop of Peterborough by reciting it at Lord Exeter's table at Burlington. The bishop was eating fry-fish; a small bit of shell went the wrong way, and turned his lordship black in the face. Roscius was alarmed, and so were all the company; but the worthy prelate, on recovering, kindly urged him to proceed, and the whole party had another hearty laugh. Garrick mimicked the cook to admiration, and seasoned the dialogue with his own piquant sauce.

It seems the old cuisinier became mortally jealous of the reputation of the scene-room, which all the world were talking of at the expense of Dolly's and other places, as the *ne plus ultra*, for the choice cookery of a steak. Grecian was so sore upon the subject that it kept him awake o' nights, and fretted him at least a stone a quarter. In fact his jolly cheeks began to hang loose about him, which induced Hogarth to call him a *drapery* faced Greek. Lambert ironically told him he would take him to the "*House*," and give him a lesson on the broiling art. This

was too much—"Why, Mr. Lambert," said the old cook, almost bursting with suppressed anger, "do you take me for a turn-brooch—a scullion—a water-wag-tail—a goose-grubber—a pot-waloper—an ass—a fool! This is very ill usage, gentlemen! Suppose you I am to be taught the science by any dirty drizzle-tailed scullion of Covent Garden?—It will be high time for the devil to bring his gridiron, and brimstone hell to boil the pot, when I go to school to the ploughouse to take a lesson.—I thus sucked the culinary art with my mother's milk.—Ask master there, pointing to Old Slaughter—ask mistress there, pointing to his wife,—wasn't I a child of the queen's privy kitchen—godson of Centlivre, yeoman of the mouth to the queen, and favourite disciple of Patrick Lamb her majesty's first master cook? Wasn't I?" Here he was interrupted by Friar Pine's painter, whose glory was to be at the head of a frolic. He took up the cudgels for Grecian, and patting him on the bald pate, for the old boy had taken off his cap, and was rubbing it with his white apron,—"Never dinch, old Trojan," said he, "challenge him to a broiling match, as he boasts so loudly of his art." This proposition cooled cookey's heat a few degrees: "Will you dare try your skill, sir?" said he to Lambert: "What man dares—that dare I," replied the scene-painter, with the utmost gravity. "It is a match then," said the cook; "Yea!" said Lambert. Cookey wiped his hot hand, and respectfully offered it to Lambert, who shook him heartily and cried "*done*—your place against mine, my jolly old Grecian!" "When is the match to commence?" said the cook, "*all eager for the fight*."—"To-morrow—or to-day," said Lambert; "the time present is the best." "So be it, sir," said the smiling Greek, conscious of victory. "Aye, have a good blaze at four," said Lambert. "Trust me for that," said the old boy, and rubbed his hands with ecstasy.

Old Grecian was determined to have his say out, so he began again, "I should like to see your noted beef-steak broiler get up three courses of four and twenty, Mr. Lambert," "drawing his knife from his belt, and flourishing it about: "I should like to see him blunder at a turtle, or brawn's head, a fricassée, fricande or ragout, a bechémelle or maitre, garbure, or gâteaux de mille feuilles."

"A fig for your friends and fricassées, your French kickshaws, and buttered verri-grease, enough to make an Englishman sick. Can you broil a steak with Lambert? That's the question." Cookey was dumb-founded at being thus cut short in his scientific colloquy by his ally, and turning round with a grin, answered with petulant gravity and mock respect, bowing as low as his fat would let him, "Mister Edge Pine, I humbly trust I can." "That's spoken like a Trojan," said Pine: "prepare your fire by times, and you shall have fair play." Be it known Old Slaughter's harder never lacked a fine rump

<sup>a</sup> Robert Edge Pine, dubbed Friar Pine, though after this period, in consequence of having stood for the fat friar in Hogarth's Gate of Calais.

of beef. The company quitted the kitchen, and the cook was left to prepare the field for action.

This dialogue took place about noon, just as the fat Grecian waddled up with the bill of fare for the day, to give it to the bar, when some stragglers of the club had called in to get the morning whet. Martin Folkes was coming down the stairs with Gostling to the coffee room; and hearing the party talk loudly of the broiling match, inquired of Harry Fielding, who generally breakfasted there, "what iron is on the anvil now?" "O!" said the wit, "here's friend Lambert going to rehearse a new opera, the Rival Cooks, with an after-piece of Just in Pudding Time. Now, sir, if you wish to take a scientific steak, cooked according to the antique, come at five, and you have nothing to bring but a keen appetite; for Lambert pays the piper."

Georgy was not best pleased with Fielding's flippancy, but being a hero he put the best face upon it; so when the time arrived he tucked on a clean white apron and sleeves, and the favourite toast of the club, *pretty Kitty*, Old Slaughter's niece, pinned her cambric handkerchief round his brow by way of cap. "Now St. George is the word," said he; "I will defend this token like a true knight;" then kissing her fair hand, he marched to the scene of action.

Not even the kitchen of the renowned Edward, when William of Wykeham was chief clerk, ever was visited by more illustrious guests. Total had hobbled his rounds, Hogarth had mustered half a score, and old George Simpson was dispatched east of Temple Bar; in short, fame had blown her trumpet, and all the members that were in town hastened to rendezvous at the old spot, to witness the sport.

My great uncle Zachary, and Friar Pine, were chosen umpires—both experienced connoisseurs, knowing to a hair's breadth to what stratum a rump of beef would cut a prime steak; and I have listened to many a philosophic dissertation, whether the plate were best rubbed with garlic or shallotte. Pine was for the first, my uncle preferred the latter.

The match was proclaimed by the umpires for three *heats*, a pound cut for each. Lambert, on looking at the fire, whispered my uncle—two *heats* I should think would suffice for a salamander; the devil himself could not stand a third.

To work they went, and each did his steak. It was a most scientific heat; Lambert wielded the tongs like a master, and turned the delicious morsel with marvellous dexterity. Old Grecian sickened at the applause bestowed on his rival, and began to blow with envy, when suddenly he "won the victory" by a *rase de guerre*. He gave the fire

† Martin Folkes, a friend and patron of Hogarth, and acquainted with all the superior wits and men of talent his contemporaries. A gentleman of elegant manners, and President of the Royal Society.

‡ The Reverend William Gostling, the author of "A walk round Canterbury," a work held in high esteem by the antiquaries.

<sup>a</sup> Old Grecian, The cook at Slaughter's was nicknamed Grecian—one of that name being a turnbrooch in Queen Anne's privy kitchen. Centlivre and Patrick Lamb held appointments in the same kitchen. Grecian's real name could never be discovered, though it is supposed he formerly had held a menial office in the Queen's kitchen.

such an infernal, such a preternatural poke, that poor Georgy retreated several times, and thus quitting his post, sounded a parley—in short he gave it up.

The cook thus saved his reputation by his wit. The umpire proclaimed Georgy a good tactician, who led on gallantly to the charge, and only retired from the too heavy fire of the enemy's works. Lambert shook hands with the old Grecian, complimented him on his generalship, adding, "I yield the palm of victory, thou man of fat! more worthy of a golden chain than Wolsey's mighty cook!"

(To be Continued.)

### ORIGINAL CORRESPONDENCE.

A CONCISE VIEW OF THE INCONTINENCE OF THE CLERGY ANTERIOR TO THE REFORMATION.—(Concluded.)

Monks, were men whose duty it was "to pray, groan, and weep for their faults; to subdue their flesh; to watch and abstain from pleasures; to bridle their tongues, and shut their ears from vanities; to guard their eyes; to labour with their hands, exult with their lips, and rejoice at heart in the praises of God, &c." How far they conformed to these directions will be shewn in the sequel. One *William Gloucester*, a monk, is described "as staying out all night, *libendo et risando*. Another monk, postquam incaluerat inero, timens ne *per continentiam morbus periret ad vitalla*, went out to find some one to cure his languor, and at length meets with a fair female.† The monks likewise, took the advantage of meal times to receive the visits of women; who were in the habit of coming after dinner; and the statute made for the correction of this abuse, permitted them to come with license of the abbot or in his presence; and makes at the same time, an exception with regard to noble women, as to season and time, as seemed fit to the superior.‡ Among the inquiries of Henry's visitors to the Cisterians and Premonstratensians, were, "whether women usith and resortyth myche to this monastery by backewayes or otherwise." ¶ And one of their own body in folio 161 a. of the same MS. observes, that "all fowhwe our owne sensalitye and pleser, and this religyon, as I suppose, ys alle in vayne glory."

When the visitors of Henry VIII. inspected the religious houses, although they discovered many irregularities, yet in some of them, the monks would disclose nothing. Thus, one of them says, "I fermanly beleve and suppose, that they had confedered and compacted together before our coming, that they should disclose nothing; and yet it is

confessed and proved, that there was here *suche frequencie of women coming and resortyng* to this monastery as to no place more.¶ And again in the same MS. fol. 131. b. "The abbey (of Newark) here is confederde we suppos, and nothing will confesse; the abbot is an honest man and doth vray well; but he hath here the most obstinate and factious canons that ever I knewe. This morninge I will objecte against divers of them; . . . and adulterie, *et sic specialiter descendere*, wiche I have lerned of thir, but not of any of them." &c.

The following anecdotes with which I shall conclude this head, will shew the remarkable fondness of the monks for dancing and women.

A certain man making a journey upon a feast-day about noon, heard the sound of people dancing; upon his looking towards the opposite side of the road, he saw four monks coming towards the dance, who on his enquiring of them whence they came? replied from their church, which was in a wood just by, and that they were going to see the dance.

A certain knight, a prudent and discreet man, a pilgrim to St. James of Compostella, went to a dance on a feast-day, in a certain town of a distant province. It happened, that a young woman sat by his side, and he asked her, whether she had a sweet-heart? to which she replied in the affirmative. On being further asked, who he was? She told him, a certain monk who was sitting near to see the dance, and often cast his eyes upon her. The knight surprised, concluded his enquiries, with demanding, whether the monks of that country in general had mistresses? to which she answered, *they had, openly and every where*.

A certain monk, who was rambling about from a cell in the remote parts of England to another in Wales, lest he should be alone in his journey, took a companion with him; not a *he* one, but a *she* one; three or four times he was most unluckily detected, and at last put into goal by some Castellans of that neighbourhood, whilst his poor lady was exposed to all the insults and indecencies of the rabble.\*

Nuns were females whose duty it was to be "*verging of thire austre*," and to be engaged in "*holi meditaciuns*;" but it appears from the *inquirenda* in the visitation of nuns, that they were not always very ready to adhere to these duties. The crime of incontinence seems to have been prevalent among them from the earliest periods, in spite of the many statutes made to correct it. Thus a visitor at a convent of Gilbertine nuns near Lichfield, "founde two of the said nunes; one of them impregnant, the othyr a yonge mayd." † Also at another convent called Harwode, there "was ijij or v nunes with the prioresse, one of them had two faire children, another one, and no mo." ‡ It is well known, that the Bishop of Lincoln, about the year 1251, in his visitations, ordered the nipples of the nuns to be

squeezed, in order to be physically convinced of their chastity. And the visitors of Henry VIII. were to enquire, whether they used to have intercourse with strangers, men and women without license especially in secret places; and in the absence of their sisters; whether used to go any where without the gates; whether they have any familiarity with religious or secular priests, not near kinsmen. Item, whether any of them use to write any love letters, or *lascivious fashions* to any person, or receive the same, and have any privy messengers coming and resorting to them with tokens or gifts from any secular persons or others; whether they talked without leave with any manner of persons, "*by gratia or backe windows*;" whether any of them were suspected of *incontinentes*, or given to voluptuousness or sloth. Respecting the communication between them and secular persons, *Alfred* of Rievesley observes, "I do not like a b \* \* d of an old woman, mixed among the poor bringing praises, and whispering soft words to you from some monk or clerk, lest she should insinuate poison, when she kisses your hand for alms received. Care too is to be taken lest the nun occasion any burdensome hospitality in the reception of religious women. For often among the good some very bad ones come, who sitting down before the nun's window, after prefacing with a few pious speeches, run off to secular affairs. Thence she begins to frame love-matters, and pass the night without sleep. Never let any messengers run to and fro between you and any man, as if for the sake of shewing kindness or inviting affection, or courtting intimacy or spiritual friendship; neither receive their presents nor letters, nor direct yours to them, as is usual with many who send girdles or purses varied with different kinds of straw or in a case, and things of this kind; to young monks or clerks." ¶

*Bertram Walton*, in his invective against nuns, says:

"But there was a lady, that hist dame Pride in grete reputation they her toke,  
And pore dame Meekness aste beside,  
To her unethys any wolde loke,  
But all as who seyth I her forsake,  
And set not by her nether most ne leste,  
Dame Ypocrisie loke upon a boke,  
And bette herself upon the brest:

¶ Vide *Monast. Angl.* li. 898.—"Item, that non of your sisters bring in, receive or take any layman, religious or secular, into the chambers of any secret place day or night, nor with thaim in such private places to commune, etc or drinke, without lycense of your prioresse." *Monast. Angl.* li. 910. It seems from the 7th item of the constitutions of the nuns of *Sopwell*, that the *tailors* of the house were the *favourite mortals*, thus invited into private places. ¶ In *Monast. Angl.* li. 896, there is mention made of "*nunes having keys of the pastore door*," and "*moche coming in and oute at un-lylle tymys*."

¶ Gold, silver, cloaths, shoes and knives, were common presents. *Monast. Angl.* li. 786. The Gilbertine nuns were not to make purses except of white leather, and without coloured silk. *Monast.* li. 784.

|| *MS. Cott. Cleop. E. iv. f. 146.*

¶ *Ibid.* f. 120. b.

¶ *MS. Cott. Tiber. B. 13.*

† *MS. Cott. Cleop. E. iv. f. 131.*

I wolde have sene dame Dewotte  
 And she was but with few of that route,  
 For dame Selowth and dame Vayne Glory  
 By vilens had put her owte.  
 And than in my harte I was full sorry,  
 That dame Envy was there dwelling,  
 The which can selth strife in eay state,  
 And another ladye was there wonyng  
 That hight dame Love inordinate,  
 In that place both erly and late;  
 Dame Lust, dame If antonnes, and dame Fye,  
 They were so there enhabited, I wotte  
 That few tokened to Goddy's service."

It was also usual to keep in nurseries various amulets for pregnant women: thus the nuns of *Gracedieu*, had part of St. Francis's coat, *quæ, et creditur parturientibus conducit*. The nuns of *St. Mary of Derby*, had part of the shirt of St. Thomas, in veneration *apud multosque pregnantas*. Those of *Wreton*, *apud Menev*, had the girdle of Bernard, *pregnantibus aliquando vestitum*. The nuns of *Yorkshire* took potatoes, *ad prolem conceptum opprimendum*! Sometimes indeed the children were murdered, of which barbarity, the following is a shocking instance of reiterated acts of incest and murder!—"Hic, cum juvenis esset, decorus formæ, instincta antiqui hostes, sorem suam illico amore concupivit, et ex ea prolem procreavit; propriis manibus suffocavit, ne ad homines incestus ipsius succederet, et reversus sic ad peccatum suum secundo et tertio de eodem fratre concepit, atque partus suffocavit!" But as the present subject is growing painfully disgusting, I shall now bring it to a close. The preceding lines have, I hope, satisfactorily developed the errors and vices with which monachism was infected; that these crimes were ultimately the cause of bringing down the Divine vengeance on the heads of its guilty professors, and that the unprincipled Henry, notwithstanding his brutality and rapaciousness, was merely a passive instrument in the hands of a wise and beneficent Being, there can be little doubt. The preceding observations could have been entirely extended to a greater length than they really are, but it is presumed, a sufficiently enlarged view of the subject has been here exhibited; the intention of writing it has been completely answered, if it has amused the reader, or excited his curiosity or interest.

CAUS.

\* Cott. MS. ut supra, f. 115. b.  
 † MS. Harl. 2385. f. 56. Some of the laws against this crime were as follow:—To carry off a nun was 120s. fine. Leg. Aluredi, l. 31. Whoever unduly handled her breasts, if she was unwilling, double the penalty (3s.) of doing so to a lay-woman. Id. c. 33. In the penitentiary canons of Edgar, a guilty nun was punished with a twenty years imprisonment; and among the Gilbertines, with perpetual penance and imprisonment, with very severe discipline. By the 13th of Edw. I. it was three years imprisonment for carrying off a nun, besides satisfaction made to the convent. Sir Robert Gifford, for stealing two nuns out of *Wilton Abbey*, was ordered never again to enter a nunnery; nor be in the presence of a nun without leave of his diocesan; to go thither naked in his shirt and breeches to *Wilton Church*, but not in the presence of the nuns; and be each

## ARTS AND SCIENCES.

**DISCOVERY SHIPS.**—We have infinite pleasure in stating from Lloyd's Books, that the Northern Discovery ships, the Hecla and Griper, were spoken with by two Aberdeen whale ships, *all well*, in lat. 68° long. 60° and on their return home, having wintered in Lancaster sound, lat. 75° long. 115°. Consequently they penetrated several hundred miles further than the preceding expedition; and report says, but we doubt its truth, they have ascertained the magnetic pole.

## EXPERIMENTS RELATIVE TO THE EFFECTS OF ELECTRICITY ON THE MAGNETIC NEEDLE.

From the *Bibliothèque Universelle*.  
 (Concluded from No. 196.)

## ADDITION OF THE EDITOR.

We have had occasion to repeat most of the curious experiments detailed above, by means of the powerful voltaic battery of our learned colleague, Professor De la Rive,\* which he had put in action on the 19th of this month, (August), to shew to a company of amateurs, and among them to one of the most distinguished members of the Academy of Sciences at Paris, (M. Arago,) the magnificent experiments of the incandescence which appears between two points of charcoal, placed (either in the air or in vacuum,) in the voltaic circuit. We took advantage of this opportunity to place, (as the author prescribes) a compass needle, alternately below and above a wire of platina four or five inches long, which closed the circuit, and which the voltaic action made red hot.

This conducting wire was in the magnetic meridian: as soon as the needle was placed below it, at the distance of about an inch, it declined nearly 45 degrees to the east of the meridian; and about as much to the west when it was placed above—the effect was immediate and indubitable.

We tried two needles; one made of a watch-spring, and with a brass chape—it was three inches long: the other a steel parallelopipedon, three inches nine lines long, and two lines of a side. Both were equally affected: the latter, though much heavier than the other, seemed to be much more energetically changed in its direction by this singular action of the pole.

This influence is the more extraordinary, as it becomes null in cases where it should seem that it ought to be greatest; that is to say, when the needle is placed in such a manner, that itself forms the circuit: then

time beaten, and so likewise in Salisbury Market and Shaftesbury Church; not to wear the insignia of knighthood, but russet with lamb or sheep fur, and calf leather shoes, nor use a shirt after he was beaten; and this, until he should have been three years in the Holy-Land, or the King recalled him.

\* Of 360 pair, of six inches square.

it remains in perfect repose, whether the voltaic poles be placed in the prolonged direction of the magnetic poles, or whether they are presented laterally in a direction perpendicular to the axis of the needle.

The following effects were obtained in subsequent experiments, in which, instead of the great battery of thirty-eight troughs, (*auges*) of ten pair each, a single trough, constructed by M. Selligie, and formed of twelve receptacles (*loges*), of copper, in each of which there was a plate of zinc, was employed.

And first, this single trough instantly heated red hot, for a length of three inches and more, the platina wire which closed its circuit.

We tried the influence of this conducting wire upon needles of copper, brass, and wood: it was not sensible; whereas it was very powerful on magnetic needles of steel. The influence acted on the latter through a plate of glass of pretty considerable thickness.

It took place in the vacuum of the air-pump with perhaps more energy than in the air; the conducting wire became there also more promptly incandescent, and melted several times.

When we placed the conducting wire horizontally, parallel to the magnetic meridian, but in a vertical plane, passing by the side of the needle; and when this wire was placed successively in a plane above that of the needle, in the same plane, or in a plane lower than the needle, the deviation produced took place in opposite directions, in the first and last of those positions; and not at all in the intermediate position, that is to say, when the wire was in the plane of the needle, and beside it.

We afterwards made a series of experiments, always placing the conducting wire vertically, but alternately varying two circumstances—1st, the relative position of the voltaic poles, and of the extremities of the wire, that is to say, making those poles answer the positive to the top of the wire, and the negative to the bottom; and placing, in each of these positions, the wire, sometimes to the east, sometimes to the west, of the south extremity of the needle; and 2d, repeating the same experiments upon the northern extremity of the same needle: the following are the results—

## First Series.

The positive voltaic pole being at the top, and the negative at the bottom of the conducting wire, retained in a vertical position. The wire being brought to the } attracts it.  
 west of the south pole }  
 To the east } repels it.  
 To the west of the north pole } repels it.  
 To the east } attracts it.

## Second Series.

The positive pole being at the bottom, and the negative at the top of the wire: The wire being brought to the } repels it.  
 west of the south pole }  
 To the east } attracts it.  
 To the west of the north pole } attracts it.  
 To the east } repels it.

The wire was afterwards placed horizontally above the needle, and its two extremities were put alternately in communication with the two poles of the trough. The following effects were obtained :

The *negative* pole of the trough being on the side of the *south* pole of the needle, this pole deviated to the *east*.

The *negative* pole being on the side of the *north* pole of the needle, this pole deviated to the *west* : that is to say, the needle takes the same direction as in the preceding case. Lastly,

The *positive* pole answering to the south extremity of the needle, it goes to the east ; and to the west when the positive pole answers to the north pole of the needle.†

It is proper to say that all these motions are prompt, decisive, without the smallest uncertainty respecting their direction.

These results may be expressed in a more simple and shorter manner by saying that the needle continues to move, in each of the *bilateral* positions of the conducting wire on the side towards which it is conducted by the voltaic influence, resulting from the situation, (higher or lower,) of the poles of the circuit.

Every attempt to form a system on this insulated discovery would seem premature. It is a great fact, which will perhaps be connected with others already known, or hereafter to be discovered, and which will multiply the relations between the magnetic, electric, caloric, and luciferous forces. What is essential for the present is, that there may remain no doubt, no illusion, respecting the principal fact, and after what we have seen and endeavoured to report accurately, this condition seems now to be obtained.

## LITERATURE & LEARNED SOCIETIES.

### PETRARCH ON LAURA'S DEATH !

In the Ambrosian Library at Milan, a copy of Virgil has been discovered, containing manuscript notes by Petrarch, among which is the following, which certainly has but little reference to Virgil :—

" Laura, propriis virtutibus illustris, et meis longum celebrata carminibus, primum oculis meis apparuit sub primis adolescentie meae tempus anno Dni. 1327, die 6 mensis aprilis, in culena Sancte Clare Avinionensi hora matutina. Et in eadem civitati, eodem mense aprilis, eodem die 6, eadem hora prima, anno autem Dni. 1348, ad hoc luce lux illa substracta est ; cum ego forte Veronae essem, heu fati mihi nescius ! Rumor turban infelix per litteras Lodovici mei Parme reperiit anno eodem, eodem mense maji, die 19 mane. Corpus illud eantissimum ac pulcherrimum in loco fratrum minorum repositum est ipsa die mortis alio vesperem. Annon quidam ejus, ut de Africano ait Seneca, non cœlum unde erat, redidisse mihi persuadere. Nec autem alio acerum rei memoriam amara uiam dulcedine scribere visum est, hoc

+ Unless there is some error of the press here, it appears that the negative and positive poles produce the same effect.—ED. L. G.

potissimum loco qui sæpi sub oculis meis redit, ut cogitem nihil esse debere quod amplius mihi placiat in hac vita, et attracto majori laqueo, tempus esse de Babylone fugiendi, crebra horum inspectione, ac facissimae testis aestimatione commovear. Quod prævia Dei gratia, facile erit præteritis temporis curas supervacuas, spes inanes, et inexpectatos exitus acriter ac viriliter cogitant."

*Oriental Literature.*—Mr. Denmanne and Mr. Gaultier, secretary adjunct in the School of Oriental Languages, have just made a discovery which will have very great influence on the civilization of the east. At a late sitting of the Academy of Sciences and Belles-Lettres, these gentlemen presented the result of a process by means of which they have succeeded in imitating oriental manuscripts, so as to deceive the most experienced eye. They have obtained certificates signed by several distinguished professors and learned orientalists, which can testify the importance of their invention to the study of languages, and to the progress of knowledge in the Levant. They have just published a prospectus in which they announce the select works of Saadi, the most ingenious of the Persian poets.

## FINE ARTS.

### THE BRITISH ARTS AND EDINBURGH REVIEW.

To the Editor of the Literary Gazette.

Sir.—Permit me the insertion of a few remarks suggested by the perusal of an article in the last Edinburgh Review, in which the life of Sir Joshua Reynolds is made a vehicle for an illiberal attack upon the merits and talents of British artists.

It might have been imagined, that an unprofitable and uncertain profession, like that of painting, would have been permitted to follow an *ignis fatuus* through all the anxieties, delusions, and difficulties that attend its course. That having struggled into existence, and shed a ray on literature, given amusement, and opened a field of employment in the ornamental decorations of polished life ; the arts and their professors would have been left to the barren privilege of a pursuit which gathered little but empty praise, without coming under the lash of censure, or suffering from the shafts of concealed criticism. But unfortunately the same disposition which tends to find fault with and calumniate whatever belongs to the present order of things, is alike prone to detract from contemporary merit, whether it appears in arts, science, or literature ; and the state of society upon which we are fallen seems to make it necessary to indulge the malignant passions, rather than to foster the kindlier feelings, for the purpose of obtaining the public attention.

It is not my design, Mr. Editor, to speak of this practice as exclusively belonging to the writer of the article alluded to ; it may be divided with many, and there is always a sufficient stock in hand for all the uses of trading Criticism. Neither is this blindness

to contemporary merit confined to our own times. Of Milton it was said, by one in his day, that the old blind school master had written a poem, which, if its length was not its merit, there was nothing else to recommend it ; and Gray, speaking of the poet Thomson, casually observes, that a poem had appeared, called the Castle of Indolence, in which there were some good stanzas.—I may not have quoted the precise words, as they may be found in Hurd's Dialogues and Gray's Correspondence, but such is their sense.

I have no wish to enter the lists in favour of the Royal Academy :—I know nothing of its cabals. Nor shall I contend whether capacity is only another word for genius ; much less that success is not an important ingredient towards the composition of staidity of temper. I only know that sound judgment and candid criticism are essential both to the growth and well being of the fine arts, and that there should be a *breadth* in the one as well as in the other ; instead of which, little can be gathered from those who advise or condemn, but, that one thing is not another. It surely needs no oracle to tell us, that Hogarth did not paint like Raphael ; or that scenes of humour, domestic life, or pastoral landscapes, are not the sublime in art :—but is nothing estimable that falls below the standard of history ?

It frequently happens, too, that this unattainable excellence is only the unconnected ideas floating in the brain of the half practised amateur, whose imagination mounts in proportion to his want of skill in the executive part of painting, and who just sees enough to pester the profession with his untangible theories. In short, the spirit of modern criticism, more particularly as it affects painting, may be defined in parodying two well known lines—

Not to admire is all the art I know,

To make men critics, and to keep them so.

This, with the properties of overlooking and forgetting, are the essential, (and oft-times the only) qualities to be found in the self-constituted and self-conceited censor ; and though it cannot be denied, that much sound judgment, and many useful hints, are mixed up in the article to which I refer, yet there is so little candour, and so much of that overlooking and forgetting system, that it is impossible to mistake the purpose of the writer, to deteriorate and bring into contempt the native talent of the country.

There is, however, some consolation, that in his notions of the exalted in art, the works of Rubens and Rembrandt are alike excluded from the superlative, at which it is his aim to prove we never can arrive ; only, in what relates to the genius and capacity of this country, he goes still further, by inferring that, because we are a *thinking*, plodding, and a warring nation, we are neither a dancing, a musical, nor a painting nation.

Of the writer's forgetfulness, or ignorance of facts, a striking instance appears in what is said about the late B. West : merit is indeed allowed him in grouping and composition ;—" In these respects nothing can be

better, as we see, in the *print* of General Wolfe; but for the rest, he might as well have set up a parcel of figures in wood, and then painted them over with a sign-post brush, and copied what he saw, and it would have been just as good." This is a tolerably sweeping conclusion to come to; but in mentioning the General Wolfe, might not Penn's Treaty with the Indians, or the picture of Lear, or that of Regulus, or that of St. Paul in the chapel at Greenwich, or that of the Stoning of St. Stephen, in the church at Walbrook, &c. have occurred to his recollection? It is to be regretted that this great artist, in some of his latter works, should have painted out much of his former reputation.

Of our annual exhibitions there is much forgotten, and also much laid to their charge. If however, they have served to nourish the growth of artists in an earlier period, it must be acknowledged that of late their members have done all in their power to stop this growth, by exclusion and neglect. Agreeing with the writer, that nine tenths of those who look at pictures know nothing of the principles of art, we contend that in this may be seen an apology, and a reason why that abstract perfection of which he speaks is not attained. "Ingulphed in politics and commerce as (Mr. Shee observes) every other subject in this country is, it is rather a matter of surprise that so much has been effected;" and it is certainly a qualification of no great credit, to be blind to the merits which have distinguished the artists of the present day. For then we must be wilfully unjust, or not be able to appreciate the talents and taste of Lawrence; the versatility and grace of Stothard; the powers of Wilkie; the expression of Mulready, or the colouring of Etty. It would not be difficult to extend the list; but these have been singled out rather to refresh the memory, than to convince the judgment of the fastidious critic.

The merits of our portrait painters are overlooked as unworthy of regard, because (it may be supposed) they do not paint history. Yet, if the portrait of Sir W. Grant in the last exhibition, and that of a gentleman in a Highland dress by Mr. Shee, or Sir W. Beecher's Duke of Sussex in a former, together with others by Phillips, Jackson, and Owen, were introduced into an historical subject, would they not make some approach to fine painting? Could not the energetic pencil of Opie, in his Death of David Rizzio, rise to the memory, as some redeeming quality in British art? It may have happened, that Richter's drawing of the School Boys has not met the eye of the writer; and it is still a matter of wonder that it does not appear among our English subjects, as a print—certain that it would be valued and enjoyed by every one whose views and understanding were not confined within the narrow compass of *calculated art*.

Surely the author of the partial article in the Edinburgh Review must know, that more than half the pleasure arising from a collection or exhibition of pictures is from their contrast and variety, both in style and subject; and that an exclusive collection of what

is called the exalted in art, would, by its monotony of character, destroy much of its interest.

In allowing something to the merits of subordinate subjects of art in the productions of Mr. Wilkie, it is done with such obvious reluctance, and so ill a grace, that it may be called damning with faint praise; nor can this dole be dealt out but at the expense of the whole exhibition—"and how unlike are all the rest."

But to step out of the exhibition into the gallery of Sir John Leicester: although neither Stothard, Wilkie, nor Mulready are there, is there nothing to bless? must all be cursed? is there no redeeming clause to be found in Turner's picture of the Dutch coast, Gainsborough's cottage, Hilton's Europa, &c. &c. I can these efforts of native talent be accidental or worthless; the hasty productions of careless and uncertain imitators.

Something also (though with the usual drawbacks) of credit is given to our painters of local scenery:—"Portraits of places, and it cannot be denied that there are many of these that have a true and powerful look of nature; but then, as if this was a matter of great indifference, and nobody's business to see to, they are seldom more than bare sketches, hastily got up for the chance of a purchaser, and left unfinished to save time and trouble."

If this be true, Mr. Editor, my recollection or judgment must fail me, for I cannot see this splash and dash in the scenery of Calcutt or Collins, of Daniel or Holland, or of Fielding, Arnold, or Jones. I see indeed a diversity of style, more calculated to please than any single style or manner; and I also trace in this diversity some of the genius of the English character—a striking out of the common track.

But the writer goes on to object, that "they are not in general lofty conceptions, or selections of beautiful scenery, but mere common out of door views, relying for their value on their literal fidelity."

What views are to be, and if not out of doors where they are to be taken, requires some explanation. Fortunately however, a clue appears to guide our incapable artists in their bewildered course, and it will be found in following the directions given to Mr. Haydon for finishing his picture of Christ's Entry into Jerusalem; for this work of six years (according to the writer) is only a preparation.

"Let him take his penitent girl for a model—paint up to this standard through all the rest of the figures, and we shall be satisfied." Truly this is coming to some conclusion, otherwise, from the writer's expressions of "softened and trembling hues floating upon the canvas," it might have led to the supposition, that Corregio or Guido might have been recommended as models of imitation, if not some of the tones and tints in pictures of Vandyke, and particularly his head of Gervasius, in the possession of the Earl of Carlisle. It seems also to have been forgotten that from some odd circumstance or other our climate did not prevent a Dobson, a Riley, a Cooper, and an Oliver, from showing

some capacity, some breathing of immortality.

But the worst is yet to come; for we are threatened in a note, whether by the editor of the Review or the writer of the article is not certain; it is, however, in the spirit of the rest—that we are in fact approaching to a period when, "the mind and muscles of the country may be sufficiently relaxed and softened to imbibe a taste for all the refinements of luxury and show; and a century of slavery may yield us a crop of the fine arts, to be soon buried by sloth and barbarism again."

'Tis, to be sure, is very consoling, and may serve to negative the wish for an attainment to be so dearly purchased; but as the writer seems to think that the soil is inimical to such a crop, it may be hoped that the same physical cause which operates against the one, may also prevent the other: but exaggerated phrases are so much in use, that they cease to alarm; and the word slavery, like that of competence, admits of great latitude. This is however a *radical* objection to the fine arts *in toto*—it is new indeed; for civilization, of which they are the sign, has heretofore been held to bestow power, and to consist with liberal and free government rather than with tyranny.

There is much in the critique on Mr. Farrington's book about nature and the Elgin marbles. Of the latter too much cannot be said; they are doubtless models of the most perfect human forms, but rarely to be found in the individual, and may be set up as a mark at which painting should arrive: but if by following nature in painting is meant a deception on the sight, as perfect in its kind as is presented by the Elgin marbles, I am at a loss to discover where it is to be found. Certainly not in the works of Raphael or M. Angelo! What is there to be seen in their works which borders upon the perfect and almost disgusting flesh of Denner, or the truly deceptive materials in A Butcher's Shop, painted by the late Mr. Keyse? Is not grandeur of style and truth of expression paramount to every subordinate quality in art? Few there are at all acquainted with the principles of painting, who do not prefer the intelligence displayed in the sketch of a master to the most laboured productions of a Denner or a Carlo Dolce. It will be well therefore, in commenting upon works of art, that reason rather than sarcasm should be resorted to; and while the highest excellence is proposed, not to shut our eyes to existing merit, nor to the cheap pleasure such merit affords.

I am aware, Mr. Editor, that these remarks bear principally upon the offensive character of the language employed by the writer in discussing the subject. It is for able pens to refute many of his arguments, and to rescue the profession from the charges of negligence and incapacity; these being merely desultory reflections suggested by perusing what cannot but be deemed a censorious and unfounded attack upon the British school of painting.

Yours, &c.

ANTI-JAUNDICE

## ORIGINAL POETRY.

[By Correspondents.]

## STANZAS

Written beneath the *Miniature of a deceased Friend*.  
 Thy picture!—it is life—health—love—  
 To gaze upon that eye—that cheek—  
 Those lips which even in fancy move,  
 Which fancy teaches even to speak!

ANON.

Nay, reproach me not, sweet One! I still am  
 thine own,  
 'Tho' the world in its toils hath detained me  
 a-while,  
 The deep vision that spelled my lone bosom is  
 flows,

And—a trust to love—I return to thy smile!  
 It hath ever been thus—when condemned or de-  
 ceived

By the many I scorned—or the few that I lov'd,  
 Whilst I braid'd my contempt—or in silentness  
 grieved,  
 It was bliss to remember whose truth I had  
 prov'd

And the falsehood of friends—the crowd's hollow  
 decree,  
 Served to bind me more fondly and firmly to  
 THEE!

Yes, I still am thine own:—tho' I sometimes  
 may mingle,  
 In lightness of spirit, with fools I despise,  
 In my heart—my dark heart—dwelling silent  
 and single,

Is the thought, of all others, it soothes me  
 to prize;  
 If I join the loud throng in its madness of mirth,  
 I but think how much purer our pleasures  
 have been:—

It glazes on the swift-glancing daughters of earth,  
 'Tis to turn to thy beauties—of beauty the  
 Queen!

And if from man's haunts to lone nature I flee,  
 Glen, mountain, and ocean, seem breathing of  
 THEE!

When a soft soothing ray from the eye of affection  
 Breaks my midnight of gloom with its halo  
 divine,

How surpassingly sweet is the fond recollection  
 Of the passionate love ever beaming from  
 thine!

'Twill beam on me no more:—yet tho' death  
 has bereft me

Of a form such as scapula from heaven might  
 adorn,

In this image—thy features of beauty are left me,  
 And the lines of thy soul in my heart's core  
 of core!

Then look not so sad—thus it ever shall be—  
 If untrue to all else—I'll be constant to THEE!

ARION.

To—

—*Micro, quibus,*  
*Intentata siles.*—HON.

Farewell, for ever—now we part,

Since every joy is flown;

Why would you keep a broken heart,

Which ne'er can be thine own?

Tis true, thine eyes my hopes have nurs'd,

Thy smiles my faith have cherish'd;

But every smile is now accur'd,

And all my hopes have perish'd.

I ask thee nought for months mispent,

Ask nought for years deceiving,—

That passion I must long repent,  
 Which leaves me lone and grieving.

Yet not a sigh shall rend this heart—

For ever I forget thee!

'Tis hope to know we now must part—

'Tis grief that e'er I met thee,

G— C. H.

## SKETCHES OF SOCIETY.

## QUEL MALHEUR!

Our last Number has brought us into pretty tribulation! Our cook has given us warning, not, as she declares, for exposing her carelessness, but for calling her such an atrocious name as *Papianrin*, in that horrible oath which we swore at; and above all, for that most infamous line,

*Rastra at sarcula tantum assueti coquere,*

which no explanation on our parts can mollify her so far as to induce her to forgive. When we told her it was written by Juvenal about a hundred years ago; she vowed it was a shame that Juvenal had not been hanged at Tyburn for his *willany*. As for its being Latin, she knew well enough from what went before and after, what it meant; and so, at least, for whom she had (pardon the indelicacy) sweated four years, had no business to taunt her with it, any more than with rack-saw, sarks, and taunrums. In vain we protested: such was the translation of our cook, Coquere (who has picked up as well as burnt some learning in our service), and all the world could not persuade her that *rastra*, *sarcula*, and *tantum*, have any other interpretation.

But our next and greater distress has sprung from our offering a *ton of bad poetry* for sale. The writer of the sample verses, dating from that seat of learning, "Oxford," addresses us in superlative fury—he says the Editor has substituted "the" for "tho'," in the last line of the 2d verse; and "by dividing a *Spencerian* stanza into two quartettes, forced upon his readers the conviction that his ignorance is commensurate to his ill-nature." In justice to so promising an author, we request that his lines may have the benefit of these corrections; for, as we ought, whatever Fortune may do, 'ride this *Spencerian* stanza will act fairly, though we are afraid we cannot change the writer's destiny so far as to make a grammarian, far less a poet, of him.—Another (or perhaps the same) signing himself *Scrutator*, threatens us that "it is a proof of courage for a writer so boldly to proclaim war against such a host of his species;" and, half-hinting that we have told "a lie," in stating that we had a whole ton of the article in question, adds, upon the hypothesis that it may be true, "mention, for heaven's sake, at what price you really will dispose of it. You say it is bad, and that it will be sold at the price of waste paper. The one and a half per cent *ad valorem*, in which you appreciate it in your second paragraph, is merely an attempt at witicism, on the felicity of which I cannot congratulate you." Thus adjured in the name of Heaven to name the lowest price, we beg to inform

Scrutator that we can make no abatement: on the contrary, as this bad poetry bids well to excite *quite a rage*, we are not sure that we shall not lay on half-a-crown or three shillings on the ton. But having dismissed these anonymous correspondents, will our readers do us the credit to believe, that not only are their letters *bona fide*, real, existing documents, but that we have actually received from Plymouth, (with a regular signature and address, post paid, and in sober earnest) a letter, of which the following is a transcript:

Plymouth, 30th October, 1820.

Sir,—Observing in your valuable Literary Gazette of Saturday last, under the head of Correspondence, of your having a lot of bad poetry, &c. to dispose of, I wish to know if such is actually the case, if so, I shall feel particularly obliged by your informing me, per return, on what terms you will part, with not a ton, but about 30, 40, or 50 lbs. I am at present confined to my room from ill health, and in all probability will be safely stowed in that situation during the winter, therefore those to-be-expected *very interesting* papers will form a fund of amusement during that period. I should have no objection, if convenient to you, to purchase some of those manuscripts which may be *tolerably good*, such as those taken notice of under the head of "too great a length," "not adapted for the publication," &c. at a moderate price.

I shall feel obliged by your answering me "pro or con," if not too much trouble, per return, addressed "at Mrs. Mary Lawton's, Jubilee-street." I am, sir,

Your most obedient servant,

HENRY JOHNKNE.

To the Editor of the  
 Literary Gazette, London.

"Oh for a horse with yings!"—Oh for a broad-wheeled waggon without wings, to bear the lumber of two hundred weeks, to our worthy friend in Plymouth! \* Positively we will pack him up 30 or 40lb. at a venture, poor soul! to amuse him during his painful confinement. He shall have sonnets to *Deities* and *Cordeliers*, and all the other *liars* of our Cockney correspondents; he shall have odes five fathoms long, and of as many lines as may twist into a cable for Dock; he shall have elegies to make him laugh even in a paroxysm of suffering; he shall have satires and epigrams that can hurt no one, and therefore will do no injury to his health; he shall have puffs more innocent than pastry for an invalid; he shall have songs such as never were sung; he shall have poems without fancy on the Fancy; and hymns in praise of boxing, as nauseous, and perhaps as efficacious, as a box of medicine; he shall have—in short he shall have all kinds of compositions, (some on Bath paper, equal in his state to the warm or salt-water bath.)

\* We would send more, but the truth must be told; we have just compromised matters with Cook, who has consented to stop, on condition of receiving 20 full aprons-full of the papers which led to the insult, in the way of kitchen-stuff perquisite.

and if he takes it at all without being cured, then will we say he is past the aid of laudanum and poppy-juice, and must try mercury, of which there is not one particle in these innocent mixtures.

In fine, we attribute all our misery to the ease with which poetry (as it is called,) can be written, since the modern fashion of caring neither for rhyme nor metre became prevalent, and spread the scribbling propensity over the "one half world." This mania is charmingly and characteristically alluded to in a never-to-be-published poem written by the Editor, many years before he could have any idea of what he should suffer from the distemper. We quote the passage:

Curst be the man, the first who disobeyed  
The measured rules  
Of ancient schools,  
And spurned the useful bonds on genius laid.  
He ne'er shall boast a name divine  
Who 'twas invented the irregular line,  
And taught the vagrant muse to sport  
In salutory song,  
With one verse  
\* Short;  
The next ('tis tedious to rehearse),  
\* No needless Alexandrine, dragging its slow  
length, by several feet too long.

### THE DRAMA.

DRURY LANE.—Mr. Elliston has, among his other improvements, reclaimed Drury Lane theatre from the gloveless-handed Beauty's reproach in the Rejected Addresses; Oh! Mr. Whitbread, be upon you, Sir! I think you should have built a colonnade:

For he has liberally erected, if not a very elegant, at least a very convenient portico, to the principal entrance of the House in Brydges Street, which the state of the weather has already proved to be an essential addition to the public comfort. The interior of the theatre has also undergone some alterations; but neither here nor at Covent Garden have the changes of colour been improvements. The box fronts of the former are now a red, far too deep; and of the latter a cold bluish green, instead of the fine warm hue which prevailed last season, and which could hardly be mended. Drury Lane would have done wisely in adopting what the other discarded. A shocking ugly drop-scene, and the brushing up of the scenery in general, complete, we believe, the preparations for the new campaign: to inspect which a numerous company were invited, and assembled last Saturday. Thither, of course, as a magazine editor would, but as a weekly writer dares not without presumption say, some of our august body repaired; and their report of the fete was quite delectable. There were jumbled together on the mimic stage, in the obscene saloon, at the refreshing bars, and round the festive supper tables, managers and actors, literati (heaven help the while!) and artists, editors and other periodical drudges, parliamentary members and vulgar people,

magistrates and doubtful characters, lawyers and tradesfolk, all tanks and degrees talking, whispering, fiddling, singing, dancing, eating, drinking, jesting (and digesting), simpering, smiling, laughing, admiring, criticising, hewing, curtsying, sidding, ogling: there was, in short, a great *to-do*, which every body was *doing* in the most genteel and agreeable manner they could devise and execute; and the whole affair went off with *ecclat*, all the company being, if not satisfied with their neighbours, profoundly and perfectly satisfied with themselves. The manager was attentive to his guests, and seemed to be in the midst of friends, many of them well able to give him a pull in drawing out that encouragement *o* which the reward of his exertions depends.

On Monday the theatre opened with the *Road to Ruin*, and all the parts in approved hands. On Tuesday, the widow of Mr. Rae had a benefit, which we rejoice to hear produced 2000*l.*; as the habits of that performer were not such as are calculated to leave the means of comfort to a wife or children.

ROMEO.—*Mr. Cooper*.—This gentleman, who is of much provincial celebrity, made his first appearance on the London boards as Romeo, on Wednesday. Adequately to sustain the line of characters in which this *debut* may be considered an embarkation, very superior qualities of person, countenance, voice, action, and judgment or talent, are requisite. Mr. C. possesses some of these in an eminent, some in a slight degree. His person is handsome; his countenance good, but not fine; his voice unposh, and deficient in the great charm of pathos; his action unembarrassed and suitable; and his judgment or talent, so far as an opinion may be formed from a part which traditional custom has made purely theatrical, cultivated, and in general, correct. With regard to the particular character in which he appeared, he was, we think we may say, decidedly successful—at any rate, he received so much applause as to induce the manager to announce the play for repetition on Thursday, and they seemed to us to be justified in this; for there were parts of his performance certainly very excellent. His garden scene, and leaning against the porch—

And I'll still stay, to have thee still forget,  
Forgetting any other home but this:

and his entry into the tomb of the Capulets, were the best touches; but the dying scene was altogether powerful, and the challenge to Tybalt full of energy. On the other hand, there were several usually striking passages, to which he gave no interest. All his scenes in Mantua were badly acted. The joyful presage of joyful news was told with gloomy sadness; but to balance this, the directions to the servant to hire "post horses," were rendered ludicrous in the delivery. The soliloquy on the starved apothecary was poorly recited, and the colloquy with that meagre wight was farcical. Throughout there was more of vehemence than the part warrants; for Romeo is soft and gentle, and not a tra-

gedy ranter. We shall but farther briefly notice that Mr. Cooper's expression is more suited for animation and spirit, than for woe or any deeper passion. His style of acting resembles the late Mr. Rae's; and his mode of delivery is formed on that of Mr. Keen, avoiding however his principal peculiarities. Upon the whole, we consider him an acquisition to the metropolis in a high grade on the dramatic scale, though far from the top. The plaudits were unanimous; and the only "*Hist, acted*" came from Mrs. West, who acted Juliet—the Miss Chester advertised for that character being invisible.

### COVENT GARDEN.

*Zanga* was played on Monday to an indifferent house. The public are after all tolerably correct in their taste, and we are not surprised that this tragedy should be no longer among their temptations. It had its day—a day of false criticism and affected feeling—a day when an English tragedy was nothing, unless it was a plagiarism from Voltaire; and English poetry nothing unless it was modelled on *Boileau*. All this has gone by; Shakespeare is read, and nature is the standard of our poetry. The stage has still to be reformed; but that time too will come; melodrama, and maudlin sentiment, and tedious affectation, will be no more. But in this censure of the play of *Zanga*, we are far from including the performance on Monday. *Macready* was the hero, and C. Kemble, *Alonso*. No actors could have more surpassed their author. It would be a mere repetition of what we have said so often, and so sincerely, to dilate now on the merits of those excellent performers. *Macready's* power has hitherto been supposed to lie in his pungency, in the solitary bitterness of a fierce and restricted spirit, in the stern and solemn devotedness of a daring and rexed mind to a purpose of evil. *Zanga* is a sketch of this rank of character, enfeebled by the feebleness of the author. *Macready* actually magnified and deepened the proportions and colours of the picture, till he appropriated it to a vigour and magnificence not its own. But he has also a yet almost unopened mine of pathetic power, and he threw in some delicious and almost involuntary touches of melancholy feeling, that gave a mental beauty to his work; like *Rembrandt's* twilight deepening round the fierce architecture of a Moorish fortress. He was greatly applauded. *Kemble's Alonso* was a fine display of an unsuspecting man, torn by those passions which make their natural prey of a generous heart. But here too the character breaks down under the imagination; and the actor is forced to supply the deficiency as he may. *Alonso* is thrown into a perpetual raging of the more violent and open mouthed passions, and his actor is compelled to a perpetual uproar. Notwithstanding this great difficulty against nature, *Kemble* seldom strayed beyond its modesty; he retained his grace even in the whirlwind, and deserved the genuine applause which he received. Still we must protest against the play.

We observe from the Birmingham Gazette

\* The sound should be an echo to the scene.  
Page.

that the theatricals in that town have been of late unusually attractive. Mr. Conway and Mrs. Bunn have taken the lead in tragedy, playing Coriolanus and Volturna, Macbeth and Lady Macbeth; and in comedy, Rob Roy and Helen Macgregor. Madame Vestris, has also been performing at Birmingham. Of the ladies, Mrs. Bunn returns to Covent Garden, Madame Vestris to Drury Lane. We are sorry not to see the gentleman announced for the London boards, for which his qualifications eminently befit him.

## FOREIGN DRAMA.

## THEATRE DE L'OPERA COMIQUE.

First performance of *la Grille du Parc*, or *le Premier Parti*.

This little opera is founded on the plot of the English farce of *How to die for Love*: Both pieces are, we believe, translations from the German.

Count de Belmont, an old nobleman, lives on his estate, with his niece Angelina, whose hand is solicited in marriage by two young gentlemen (named Dericourt and Saint-Leon) at once friends and rivals. The uncle being at a loss how to determine in favour of either of the suitors, declares that he who may, by any stratagem, induce his rival to go beyond the park gate, shall be the happy bridegroom. The gentlemen accept the conditions proposed; but before commencing the attack, each secretly gains over to his interests the valet of his rival. Giovanni, Saint-Leon's valet, persuades Dericourt that Angelina has been carried off by pirates, and the lover is on the point of passing the park gate to sail after the galleys, when unfortunately Pietro, the other valet, discovers the trick. The latter has also arranged his schemes, and Saint-Leon receives a note announcing the death of the aunt of a young lady to whom he had formerly paid his addresses:—this aunt it appears had been his only obstacle in the way of an advantageous union; but Saint-Leon is on his guard; he pretends to be duped, declares his intention of departing, and invites his friend to accompany him. Dericourt agrees to do so, but each has his plan arranged, and the two valets disguised are sent to personate their masters.

After several unsuccessfull stratagems, Dericourt purposely insults Saint-Leon, and the latter challenges him; a pair of pistols are produced, but the cunning Pietro takes care to remove the balls. At the first fire Dericourt falls as if mortally wounded; Saint-Leon, in a fit of despair, rushes out of the park in quest of assistance, when, to his astonishment, the deceased comes running after him to invite him to his wedding.

## VARIETIES.

"A Constant Reader" assures us, that the story related in the Literary Gazette of the 7th ult. as applying to the late Sir Peter Parker, is incorrect in that part only: as the circumstance did literally happen in the Mediterranean Sea, and is well known among the naval officers. The parties were the late Admiral Joseph Payton and his son.

From a comparative estimate of the suicides committed in Paris and its neighbourhood

during the two first quarters of 1819 and 1820, it appears that in the first quarter of 1819, the number of suicides amounted to 84. In the second quarter in the same year to 115: total during the half-year 197. In the first quarter of 1820, the number amounted to 61; in the second to 105. Total during the half-year, 166.

The French journals relate the following melancholy occurrence:

On the 1st instant two butchers of St. Bonnet-le-Chateau, department of the Loire, purchased several cows, one of which died suddenly of an epizootic disease. They circulated a report that the animal had died in consequence of having been gored by the horn of another cow, and the carcass was accordingly cut up and sold. Of three persons who ate of the meat, the first fell ill on the 5th, and was buried on the 10th. The second took to his bed on the 10th, and expired on the 11th. Hopes are, however, entertained of saving the third. The disease of which this cow died is called by veterinarians the *white thorn*; it makes its appearance in pimples resembling those of the swine pox. The poison is of so active a nature, that the body becomes putrid almost immediately after death.

[From the *Percy Anecdotes*, noticed in our last.]

*Country quarters*.—A lady advanced in age, and in a declining state of health, went by the advice of the physician, Dr. Hunter, (who relates the anecdote) to take lodgings in a village near the metropolis. She agreed for a suit of rooms, and coming down stairs observed, that the balustrades were much out of repair. "These," said the lady, "must be mended, before I can think of coming to live here." "Oh no, madam," replied the landlady, "that would answer no purpose, as the undertaker's men in bringing down the coffins would break them again immediately."

*Lord Clonmel*.—The late Lord Clonmel, who never thought of demanding more for an affidavit, used to be well satisfied with a shilling, provided it was a *good one*. In his time the Birmingham shillings were current, and he used the following precautions to avoid being imposed upon by taking a bad one: "You shall true answer make to such questions as shall be demanded of you touching this affidavit, so help you God!!! Is this a good shilling? Are the contents of this affidavit true? Is this your name and hand-writing?"

*Coercing a defeat*.—A. M. Gaubrier brought out in 1753, at the Italian Theatre, Paris, a piece called *Brioche*, or the *Origin of Pappets*, which happened not to succeed. The unfortunate author was pertly asked, how he could think of venturing such a thing on the stage? "Oh!" he replied, "the wits of Paris had all, one after another, quite *ennuyé* me; and I chose this way of assembling them together, and taking my revenge on them in a body."

*Bon Mot*.—Shortly after his late majesty's recovery in 1789, he happened one day, when riding out on horseback, to meet Lord Pyke, on seeing whom he exclaimed, "There comes a man who is neither gambler nor rat!"

His lordship replied, "Your majesty is mistaken; I am the greatest gamester on earth; *for my all is on that horse*."

*Charles James Fox*.—After Byron's engagement in the West Indies, there was a great clamour about the business of ammunition. Soon after this, Mr. Fox had a duel with Mr. Adam. On receiving that gentleman's ball, and finding it had made but little impression, he exclaimed, "Egad, Adam, it had been all over with me, if you had not charged with government powder!"

## LITERARY NOTICES.

We are requested to say that Mr. Washington Irving, the author of the *Sketch-book*, and of *Knickerbocker's History*, is not, as advertised, the writer of the poem entitled *The Lay of the Scottish Fiddle*. That piece is well known in America to be the production of Mr. Paulding of Washington city.

The life of *General Carnot*, written by himself, has just been published at Haderstadt.

## METEOROLOGICAL JOURNAL.

OCTOBER, 1820.

Thursday, 26.—Thermometer from 39 to 52.

Barometer from 29, 51 to 29, 16.

Wind W. & N. W. 1, and S. W. 3.—Generally cloudy, with heavy rain in the morning.

Friday, 27.—Thermometer from 45 to 51.

Barometer from 29, 15 to 29, 47.

Wind S. W. 2, and W. b. N. 3.—Generally cloudy.

Rain fallen, .225 of an inch.

Saturday, 28.—Thermometer from 37 to 53.

Barometer from 29, 71 to 29, 89.

Wind W. 2, and 4.—Generally clear.

Rain fallen, 15 of an inch.

Sunday, 29.—Thermometer from 33 to 48.

Barometer from 29, 71 to 29, 40.

Wind S. b. E. 1, and E. S. E. 2.—Generally cloudy, and raining the greater part of the day.

Monday, 30.—Thermometer from 32 to 53.

Barometer from 29, 59 to 29, 80.

Wind S. W. 2, and 4.—Generally clear.

Rain fallen, .2 of an inch.

Tuesday, 31.—Thermometer from 29 to 49.

Barometer from 29, 69 to 29, 46.

Wind E. 1, and 4.—Generally cloudy; sunshine at times. A white frost in the morning.

NOVEMBER 1820.

Wednesday, 1.—Thermometer from 41 to 48.

Barometer from 29, 54 to 29, 77.

Wind S. E. 1, and S. W. 4.—Morning cloudy, with rain; afternoon and evening generally clear.

On Tuesday 7th at 54 minutes, 3 seconds, after 5 o'clock, the 3rd Satellite of Jupiter will emerge from an eclipse; and the same day, at 28 minutes, 6 seconds, after 10, the 2nd Satellite will emerge from an eclipse.

Edmonton, Middlesex. JOHN ADAMS.

TO CORRESPONDENTS.

The "Bencher's" *dashing friend* is much mistaken in the information he has given concerning us. Publius will find a letter to that effect.

The fourth historical Sketch of early English History, and several other articles, are of necessity postponed.

## BOOKS PUBLISHED THIS DAY.

A new edition, completed to the Death of the King, in 6 volumes 8vo. price 3l. 3s. boards.

**THE HISTORY OF THE REIGN OF GEORGE THE THIRD.** To which is prefixed, a View of the progressive Improvement of England, in Prosperity and Strength, to the Accession of his Majesty. By ROBERT BISSET, LL.D. author of the *Life of Burke*, &c. &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"Dr. Bisset's History is highly prize-worthy—it narrates with greater detail and completeness than Macfarlane, Belsham, or Adolphus, the transactions of the present reign. The style is natural, yet elegant; the information abundant, yet select; the criticism loyal, yet liberal. In short, it appears to us more likely than any of the rival histories, to amass itself into a fine and finished, as the regular and generally received Continuation of the History of England."—*Annual Review*, Feb. 2.

\* For other very favourable accounts of this Work, see the Monthly Review, British Critic, Anti-Jacobin, &c.

*Care's Lord Walpole, New Edition.*

In 2 vols. 8vo. the third edition, corrected and enlarged, price 1l. 6s. boards.

**MEMOIRS OF HORATIO, LORD WALPOLE,** selected from his Correspondence and Papers, and connected with the History of the Times, from 1678 to 1757. By W. COKE, M. A. F. R. S. F. A. S. Archdeacon of Witley, and Rector of Barton. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

1. **MEMOIRS OF JOHN DUKE OF MARRBOROUGH;** with Original Correspondence, 6 vols. 8vo. with Atlas, in 4to. 6l. 5s.

2. **HISTORY OF THE HOUSE OF AUSTRIA,** from the Foundation of the Monarchy to the Death of Leopold the Second, 1618 to 1790. 5 vols. 8vo. price 3l. 15s. 6d. boards.

3. **MEMOIRS OF THE LIFE AND ADMINISTRATION OF SIR ROBERT WALPOLE,** Earl of Orford, 4 vols. 8vo. 2l. 5s.

4. **MEMOIRS OF THE KINGS OF SPAIN OF THE HOUSE OF BOURBON,** from the Accession of Philip the Fifth to the Death of Charles the Third, 1700–1788. The 2d edition. In 5 vols. 8vo. 3l. in boards. In imperial 4to. 12l. 15s. boards.

5. **TOUR IN MONMOUTHSHIRE.** 2 vols. 4to. with Plates, 4l. 4s. boards.

6. **NORTHERN TOUR.** 5 vols. 8vo. 2l. 5s. boards.

*Keith's Trigonometry, New Edition.*

In 8vo. (the fourth edition, corrected and improved), price 14s. boards, of

**AN INTRODUCTION TO THE THEORY AND PRACTICE OF PLAIN AND SPHERICAL TRIGONOMETRY,** and the Stereographic Projection of the Sphere: including the Theory of Navigation; comprehending a variety of Rules, Formulae, &c. with their practical applications to the Measurement of Heights and Distances, to determining the Latitude by two Altitudes of the Sun, the Longitude by the Lunar Observations, and to other important Problems on the Sphere, and in Nautical Astronomy. By THOMAS KEITH. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author,

1. *The Elements of Plane Geometry,* in 8vo. price 10s. 6d. 1bs.

2. *A New Treatise on the Use of the Globes,* 12mo. 6s. boards.

*The Outlaw of Taurus.*

In 8vo. price 4s. 6d. sewed.

**THE OUTLAW OF TAURUS,** a Poem. To which are added, Scenes from Sophocles. By THOMAS DALE, of Benet's College, Cambridge, author of the "Widow of the City of Nain."

"This my son was dead, and is alive again; he was lost, and is found."—*Luke* xv. 24.

Printed for J. M. Richardson, 23, Cornhill; J. H. Sturges, Piccadilly; and Messrs. Deighton and Sons, Cambridge.

In 8 vols. 12mo. price 1l. 1s. boards.

**ECCENTRICITY, A Novel.** By Mrs. MACNALLY, Printed for Longman, Hurst, Rees, Orme, and Brown, London; and John Canning, Dublin. Of whom may be had, "Nice Distinctions, a Tale," post 8vo. 10s. 1bs.

*The Sports of the Field, &c.*

In 3 vols. demy 4to. price 7l. 17s. 6d. boards, or 5 vols. royal 8vo. price 3l. 5s. boards.

**RURAL SPORTS; or, a Description of the Pleasures and Amusements arising from the Air, and Fields, the Waters, and the Forest; being Rules and Directions for Shooting, Fishing, Hunting, Training, and Management of Dogs for Shooting, Conning, Hunting, &c. ## REVIEW OF NEW BOOKS.

*The Jacobite Relics of Scotland &c.* Collected and Illustrated by James Hogg. 12mo. London and Edinburgh, 1819. One of our many purposes, frequently earned and never fulfilled, has been to notice this collection of the Jacobite Relics of Scotland. Perhaps the reason why our design is not executed, though we were at no time minutely sensible of it, was that we could not speak with such entire satisfaction of the work as we wished. Of all the effusions of genius and talent, it is certain that those which party and political feelings give birth to, are the most effervescent. They have their effect and their triumph in the day of their inception; and posterity has generally disdained their acquaintance. But still, when we tend to throw a light upon history, when they are identified with great national feelings on interesting national struggles; when they pourtray the manners as well as the passions of the times to which they belong; they are far from being deservedly ranged from the knowledge of the time to the oblivion of the future. At all events, we were near enough the era of Mr. Hogg's materials to feel more than antiquarian curiosity about the relics which his title led us to expect. Delayed so long, however, it is probable should have waited till the author's projected continuation revived the subject before we took it up, had not several circumstances induced us to allot to it a brief notice. The first and most operative of these, is the notice received from a friendly correspondent, that the several original Jacobite Songs, which we subjoin to this notice. The second is the review of Mr. Hogg's work in the Edinburgh Review, and his defence of it and reconfirmation upon his critic Blackwood's Magazine. The review is scarcely severe; and, considering the character of the Ettrick Shepherd, bitter and derisive. It presumes from the publication, or rather we fancy, it knows from personal intercourse, that Mr. Hogg is a man in his politics; and therefore it takes the poor Jacobite Relics, as if they were embodied hosts of *Cavaliers*, and tries to subvert them with all the fury of *Levelers*. We are not angry with the Edinburgh Review for maintaining its politics on political objects, but we are sorry that any distinguished critical performance should bend entirely to the madness of the hour, as if unable to leave politics out of any thing; and Tory are terms rather consecrated to than understood and applicable; and we are to have their predecessor epigrams made a subject of contention among us as at a loss to imagine; especially review of a poetical compilation, and at OL. IV.

an era when political Quixottes may have their belly full of giants, and windmills, and galley slaves, and goatherds, and showmen, in reformers, and radicals, and grumblers, and theorists, and demagogues. We are but repeating an opinion we have more than once expressed, when we say it is a lamentable thing to find party and even factious feelings, mixed up with science and literature so intimately that the pure enjoyment of either is defeated, and the mind-politic is drugged with poisonous not one iota less deleterious and fatal than those which Mr. Accum has so accurately exposed as mingling with the more solid enjoyments of the body-politic.

With regard to the collection itself, we are equally free to say, that we were disappointed in it. The coarseness of some of its contents may be excusable, because genuine; for no Editor, to use old Lady Duberly's exclamation, can make a silk purse of a sow's ear. But the selection does not appear to be judicious; and we are sure we are, that many of the most beautiful remains of Jacobite versification might have been substituted for much that is inferior in this work. But our main objection is to the quantum of tinkering which we think is evident in these songs. No doubt there are many versions of nearly all of them; and Mr. Hogg may have chosen those which in his opinion were the most original. We have heard some of them however far better than in his copies; and are really afraid that he has been mending the majority, to fit them for modern understandings. What strengthens us in this supposition, is his own extraordinary confession, in reply to the Edinburgh Review; namely, that one of the poems which it praises as replete with sly characteristic Scotch humour, is his own composition! Now, it is very true this is a good hit quoad the critic who was reviling him and eulogizing what he did not know to be his; but how stands the question between him and the public, which received "Donald Macgillivray" (the poem alluded to), like the rest, on his assurance, as a Jacobite Relic! The thing itself is of very little consequence; but as a barefaced literary imposture (we employ the word without attaching a moral imputation to its meaning), it is surely not the most creditable to a person who is publishing what he pretends to have rescued from the moth which is consuming the memorials of a former century.

Having been induced by our subject (now that we have taken it up) to exceed our usual bounds for remark, we shall only quote the song of Macgillivray from Mr. Hogg's *Jacobite Relics*; and state that most of the tunes are noted without the base, which is sufficient to afford a very fair notion of their style and beauty.

Donald's gane up the hill hard and hungry;  
Donald comes down the hill wild and angry;  
Donald will clear the gounk's nest cleverly.  
Here's to the king and Donald Macgillivray.  
Come like a weigh-bank, Donald Macgillivray,  
Come like a weigh-bank, Donald Macgillivray;  
Balance them fair, and balance them cleverly;  
Off wi' the counterfeit, Donald Macgillivray.  
Donald's run o'er the hill but his tether, man,  
As he were wad, or stang'd wi' an ether, man;  
When he comes back, there's some will look merrily;  
Here's to King James and Donald Macgillivray.  
Come like a weaver, Donald Macgillivray,  
Come like a weaver, Donald Macgillivray,  
Pack on your back, and c'wand sac cleverly;  
Gie them full measure, my Donald Macgillivray.  
Donald has foughten wi' rief and rogery;  
Donald has dinner'd wi' bones and beggary;  
Better it were for Whigs and Whiggery;  
Meeting the Deril than Donald Macgillivray.  
Come like a tailor, Donald Macgillivray,  
Come like a tailor, Donald Macgillivray;  
Push about, in and out, thimble them cleverly.  
Here's to King James and Donald Macgillivray!  
Donald's the callan that brooks sac tangleness;  
Whiggery, and priggery, and a' newfangledness,  
They maun be gane; he wians be hankit, man;  
He maun hae justice, or faith he'll tak it, man.  
Come like a cobler, Donald Macgillivray,  
Come like a robler, Donald Macgillivray;  
Best them, and bore them, and lingel them cleverly.

Up wi' King James and Donald Macgillivray!  
Donald was mumpit wi' miris and mockery;  
Donald was blinded wi' blades o' property;  
Arles ran high, but makings were naething, man;  
Lord, how Donald is flyting and fretting, man!  
Come like the Devil, Donald Macgillivray,  
Come like the Devil, Donald Macgillivray;  
Skep them and scaud them that prov'd sac unbrithery.

Up wi' King James and Donald Macgillivray!  
We now turn to the communication of our obliging correspondent Kædæ, who says, "Having lately fallen in with a collection of Jacobite songs, some of which I believe are not generally known, I herewith transmit you a few; and should you deem them worth a place in the Literary Gazette, I may perhaps (on finding a suitable mode of conveyance) send you the whole, from which you might make your own selection."

The following are new to us; and were they nothing more than curious, we should be pleased to give them insertion. But the first and third, though somewhat uncouth in metre, are possessed of eminent poetical sentiment; the second is a whimsical satire; and the fourth (which owing to a want of precision in our friend, and his giving a second signature, we are not sure is not,

\* Donald Macgillivray is here put for the Highland Clans generally.

† We shall esteem it a marked favour. ED.

like Donald Macgillivray a modern production, and rather sent for our original poetry, than as one of the Jacobite specimens) is a very sweet song indeed.

#### THE PRINCE'S WELCOME.

1.  
Thou stem sprung from a noble line,  
And Monarch, in thy Right Divine,  
By the chains which too long have bound us,  
By the light which doth surround us,  
To shew the world what thou art,  
We welcome our Charlie Stewart.

2.  
Thy people's trust and pride,  
With valour at thy side,  
By the joy thy presence yieldeth,  
By the power thy subjects wieldeth—  
Who ever, and still to thee true art,  
We welcome thee, Charlie Stewart.

3.  
Heir of our ancient throne,  
Whom thy country now doth own,  
By the songs glad North is singing,  
And by hopes like flowers up-springing  
To gladden every true heart—  
Welcome! welcome, Charlie Stewart.

#### AIKENDRUM.

1.  
Ken you how a whig can fight,  
Aikendrum, Aikendrum?  
Ken you how a whig can fight  
Aikendrum?  
He can fight the hero bright  
With swift heels and armour light,  
And his wind of heavenly might,  
Aikendrum, Aikendrum!  
Is not Donald in the right,  
Aikendrum?

2.  
Ken you how to court a whig,  
Aikendrum, Aikendrum?  
Ken you how to court a whig,  
Aikendrum?  
Look jolly, blithe, and big,  
Tak his ain blist side, and prir,  
And the poor and fearless whig,  
Aikendrum, Aikendrum!  
For opposition's sake,  
You will win.

3.  
Donald's running round and round,  
Aikendrum, Aikendrum!  
Donald's running round and round,  
Aikendrum!  
But the chief cannot be found,  
And the Dutchmen all are drown'd,  
Royal Jamie now is crown'd,  
Aikendrum, Aikendrum!  
And the dogs will get a stound,  
Aikendrum!

4.  
We have heard of whigs galore,  
Aikendrum, Aikendrum!  
We have heard of whigs galore,  
Aikendrum!  
But we've sought the country o'er,  
Wi' cannon and claymores,  
And still they are before,  
Aikendrum, Aikendrum!  
We may seek for evermore,  
Aikendrum!

Can we forget the bright days gone by,  
Enshrined in our nation's story?

Nor think of the present dark destiny,  
O'er-shadowing all its glory?  
And are such days ever past and gone?  
When like thy strong bulwark unshaken  
Thou remained? Has Honour abjured thy throne?  
Shall the spirit of Freedom ne'er waken?

Lo! the day-star of Hope hath risen afar,  
Its beams shining brightly o'er thee;  
We hear the sullen approach of war,  
Which shall drive the tyrant before thee.

The foemen are gathering many and fast;  
Soon their blood shall darken the water:  
The rav'n'ing birds, greedy for their rich prey,  
Are screaming and swooping for slaughter.

Joy to thee, Scotland, Joy! ere long  
Thy name as it wroth shall betoken;  
Thou't again be the land of peace and song,  
When thy chains are shiver'd and broken.

#### THE RIVER OF LIFE.

1.  
When young Hope's flattering dreams  
We are joyfully pursuing—  
When Fancy's golden schemes  
Our path with flowers is strewing—  
Who hasten not where such beauty gleams?  
(—Its distance deceiveth us ever!)  
Who longs not to plunge amidst its streams,  
And cross Life's shining river?

2.  
Yet when we reach the brink—  
Wildly its waters are flowing—  
When its sparkling streams we drink,  
How cold!—though in sunshine glowing—  
That we shrink back heartless and chill'd,  
(Nor would we venture ever—  
If so we might—) with tremblings fill'd,  
To buffet Life's foaming river!

3.  
For Hope turns faint and dim—  
Sweet Fancy but deceives us;  
And as we onwards swim,  
Joy with Life's current leaves us  
To struggle with the waves which beat,  
Their fierceness increasing ever—  
Left helpless, if Faith should not clate,  
While crossing Life's impetuous river.

4.  
Has Faith e'er failed in time of need  
To strengthen and up-buoy us,  
When we perceive Earth to recede?  
Oh! it cheers us with prospects joyous!  
Scenes changeless and true—what they seem  
to be.

When Life's tumultuous river  
Hath flow'd into Eternity,  
Shall be unweild! and remain ours for ever!  
K. V.

[Should our Correspondent enable us to add to these poems, we flatter ourselves that our readers will not be displeased with the treat.]

*Notes on Rio Janeiro, and the Southern Parts of Brazil; taken during a Residence of Ten Years in that Country, from 1808 to 1818. By John Luccock. London, 1820. 4to. pp. 639.*

We have rarely met with a more ponderous and more miscellaneous volume than the present; which we are ready to confess we have not read through, though we are presuming to

take a public notice of it. At the same time we must say that it is only want of leisure which has prevented our perusing it entirely; for in all the departments we have made, and they have been many and long, we have been highly entertained with Mr. Luccock's lucubrations. He seems to us to be a plain, sensible, well-informed man, to have had excellent opportunities of observing the country; to have made good use of them; and, consequently, to have produced a book like the *Country*, of great magnitude, and with curious matters meeting the reader, as they do the traveller, at every turning. Indeed the mass of information is immense, and the volume exceedingly amusing; though from being ill-arranged, its bulk is rendered more oppressive than if a good system had been adopted. Upon such a view as we have taken of it, we think we may safely say, that it will be found to contain much valuable intelligence, especially to merchants, seamen, and colonists: many singular facts connected with natural history; a good deal of what is interesting to geography; and a fund of agreeable observation and anecdote. From these we draw, almost by a *Sotus Luccockianæ*, the following miscellanies.

"A fish, here called the Bagre, and very common on every part of the coast, we thought the most palatable when taken at its sandy bottom. It is about twelve inches long, formed much like the Dog-fish, has a large head, the bones of which are uncommonly hard; two fins on the side and one on the back, all of them long in proportion to the size of the fish. The anterior ray of the fin is a strong serrated bone, sharply pointed, which it has the power of erecting, and fixing at right angles with the line of the body, so firmly, that, with the utmost force of both hands, I have been unable to change its position. This firmness depends, not on the strength of the muscles employed in its erection, but on the form and hardness of the joint, which is a sort of compound hook, working upon an upright pin, altogether unlike what I have noticed in any other fish. Nature appears to have intended this for defence, and a more secure one it is difficult to conceive. The Bagre, when caught, utters a loud grunting noise, with other apparent signs of anger. It lives long out of the water, and is with difficulty killed by blows. I observed on the plate of the skull, between the eyes, a small aperture, covered with a thin whitish membrane, and imagined that, through this, it might be killed by touching the brain. We accordingly introduced a filament, taken from one of the bass cables, which produced an immediate paralysis, and the fish died without farther suffering. The aperture may, probably, be a distinguishing

mark of the species, which, I believe, has not hitherto been described."

"The name of Charqueados is derived from the Charqued Beef, which the district prepares and exports. When the cattle are killed and skinned, the flesh is taken off from the sides in one broad piece, something like a slice of bacon; it is then slightly sprinkled with salt, and dried in the sun. In that state it is the common food of the peasantry in the hotter parts of Brazil, is in itself by no means to be despised; and as it will keep long forms an excellent sea stock, and would bear carriage to distant parts of the world. Some idea of the immense quantity of beef thus prepared may be formed from the fact that, in one year, an individual, José Antonio dos Anjos, slaughtered fifty-four thousand head of cattle, and charqued the flesh. The piles of bones which lay in his premises, far surpassed my utmost conceptions, and there were thousands of Urubus, the Vulture of South America, flying round, and feeding on the offal.

"During the slaughtering season, it is not uncommon for large packs of dogs to make their appearance, and assist the vultures in picking the bones; and it is said that the ounce will do the same. The bones thus picked, are generally reduced to lime. It is certain that, not in this part of the country only, but in almost every part of Brazil, there are considerable numbers of wild dogs; and that the different species of these animals have acquired distinguishing Indian names. Yet I cannot think that they were aboriginal natives of South America, but believe them to have been introduced, in a domesticated state, by the first European settlers, and to have quickly gone wild."

"The reader has regarded with wonder, perhaps with incredulity, the account before given of the size of the farm of Pellotas; and, indeed, the reported extent of farms in this part of the American Continent can scarcely be mentioned with boldness, by one who has himself little doubt of the truth of the accounts. The smallest are stated at four square leagues, or more than twenty thousand acres; the largest are said to reach to a hundred square leagues, or near six hundred thousand acres. To each three square leagues are allotted four or five thousand head of cattle, six men, and a hundred horses; though, according to circumstances, such as the distance from navigable waters, or from church, there must be a variety in the number of oxen kept for the business of a farm. The proportion of horses will appear a very large one; but it is to be remembered that they cost nothing in keeping, as they are turned out on the plains; that no one about the farm, not even a slave, ever goes to the shortest distance on foot; and that each manager will change his horse two or three times in a day. About a hundred cows are allowed for the supply of milk, butter, cheese, and veal, to a farm of the average size. Hogs are usually found near the houses, as little care is taken of them; they under about, root up the earth, devour refuse, and make a good part of their subsistence on the waste parts of the cattle

slaughtered. There are few sheep, and they are remarkably light and ill made, with a short ordinary wool; which, however, might easily be improved. This wool is, at present, used partly unstripped from the skins, as stuffs-covers and the like, partly for the stuffing of beds and mattresses. The country is so thinly peopled, its inhabitants have so little liking to mutton, and the wild dogs and other beasts and birds of prey are so numerous, that there can be little inducement to increase the flocks.

"In every farm there is at least one enclosed place, called the rodeio, generally on the highest spot; here the cattle are occasionally collected, marked, and treated as circumstances may require. So accustomed are they, particularly the horses, to this practice, that when the servants of the farm ride along, swinging their lassos or their bats, and loudly pronouncing the word rodeio, they all walk slowly to the spot. In a country so little enlivened by variety, this assemblage forms one of its most rural and pleasant scenes."

"On the bank of the St. Francisco was recently found, beneath the surface of the water, a very extraordinary crystal, formed round the root of a tree, and upwards of twenty-four inches long. Next to the wood was a coating, about half an inch thick, white at the surface, and gradually changing toward the wood into the common appearance of flint, but at the bottom somewhat darker. On it stood, in regular order, white and transparent pyramids, half an inch high, each made up of four equilateral triangles, of which pyramids there were about fifteen in every circle. The root was much decayed, and dropped out, leaving a long tube, whose bore was three inches in diameter, and whose internal surface displayed the impression of the knots and marks of the wood, retaining also fragments of the bark attached to it. This crystal was found by four men, who, disagreeing about its value, broke it into many parts, and each took one. William Harrison, Esq. of Rio de Janeiro, became possessed of one of these pieces, and sent it, I believe, to his friends in Liverpool. There were apparent indications of the manner in which this fossil advanced to its full size, by laminae successively laid on the pyramids, and the base thickening in consequence. Not only as it seemed to me, do such fossils grow, but I apprehend that, where the situation and circumstances are favorable, they are produced in a comparatively short period. But how formed, and from what materials, I presume not to say."

"The death of an old governor gave an opportunity of witnessing a curious funeral ceremony. The corpse was dressed in the same full military uniform which the general wore when commanding in a battle remembered with honour in the neighbourhood. An arm-chair supported the body, and the people went to pay it their respects, much the same as to a living governor. This custom is not peculiar to St. Catherine's; through the whole of Brazil a ceremonious visit is usually paid to the dead."

"Here I saw an instance of that singular

malady, the Guinea-worm. The patient was a negro-boy, about fourteen years of age, among whose countrymen the disease chiefly prevails. The animal, if so it may be called, appeared coiled up beneath the skin; after some time, what was said to be the head protruded itself, this was seized with a small forceps, and the worm drawn out to the length of two inches; the extracted part was then wound about a small stick, to prevent its return. In a few hours after another portion was drawn out, and secured in the same way; by a similar process, the greatest care being always used not to break it, the whole was extracted, and then appeared like a thin dry thread of catgut, and was several feet in length. The boy had these worms in every part of his body, had been treated for them in his own country, and was deemed incurable, and, on that account, had been sold by his parents for two yards of checked linen. He remained in the hospital about three weeks, was placed, I believe, in a state of complete salvation, and then discharged cured. For five years afterward, during almost every day of which I saw him, he remained free from the complaint, and proved an excellent servant, often expressing his gratitude to his master in warm and simple terms. "My father in Africa," he would say, "sold me; you are my father, I love you best." I have pleasure in adding, that I met with the lad in Paris, in October, 1819, and that he continued perfectly well. I believe he is now, June 21st, 1820, at Buxton."

"Joining the party on the beach, I was introduced to the servants, by an acquaintance, who said to them,—"this is my friend, if he steal any thing I am accountable for it." To an English ear such an introduction sounded grating; but to a Brazilian, instead of intimating that the person in question is in the least addicted to pilfering, it is equivalent to declaring, that his character for rectitude and propriety of conduct is so established, that no one will believe another who attempts to slander him. This is the sense in which the negroes universally understand the phrase; and such distorted modes of expression are so common here, with persons of all ranks, as to form a very observable feature in a portrait of the country."

"The party left the city by water about four o'clock in the morning of a Dia Santo, carrying provisions and the most essential articles of table furniture. Having landed the servants and baggage, my friends proceeded to a neighbouring chapel and heard mass. Breakfast was taken on their return, and proved a scene of noisy mirth and good humour. Afterward every one exerted himself to promote his own diversion and that of his companions. Both sexes contended in feats of speed, agility, or strength, with unbounded gaiety and frolic, and gave full play to the buoyancy of their spirits. All this, it is allowed, was not very conformable to our measured deportment in society, and by many will be denounced as indecorous. To me the scene presented the playfulness of nature, untrammelled by forms, remote from

prudence and suspicion, from the consciousness of evil committed or intended. And why not be active and airy while nature allows us? Why resolve that all who are so, let their previous customs and habits be what they may, must necessarily be vicious or vulgar?

"When the sun rose too high to admit of continued exertion, conversation, cards, and music, filled up the interval before dinner. The servants, as it was a fish-day, had been employed in drawing the seine, and had procured an ample supply for those of the company who were unprovided with a dispensation. A priest, however, who joined our party, kindly offered his utmost influence with the Creator of all good things, to prevent his being displeased with those who might on such an occasion dine on flesh; yet, agreeable to the established rule, he would not hear of any one mixing flesh with fish in his meal. With a small part of the company I spent an hour in going, in a canoe, to the neighbouring rocks, to draw up from the deep some of those singular animals with which the harbour of Rin abounds, and which, I think, would fully repay the Ichthyologist's minute investigation.

"Our dinner, like its prelude, had too little form to be, in general, pleasing to an English taste, and its modes would hardly chime with our usual conceptions of comfort; but, as is commonly the case here, it proved a hearty meal, and fitted most of us for repose. Few could have the accommodation of a bed; many preferred a siesta out of doors, and for them 'mats were spread under the trees. About four the party re-assembled, seated themselves on the grass, talked, sang, and enjoyed some frolic of a gentler kind, until the hour of Ave Marias. We then entered canoes, attended divine service at the Lazaretto, and retired to our respective homes."

(To be Continued.)

#### HISTORICAL SKETCHES.

##### *The Anglo-Saxon Octarchy.\**

In the year 560, the eight Anglo-Saxon governments which we have particularized in our former Numbers, were established in Britain; and after a contest, which the natives maintained for nearly a century and a half from the landing of Hengist in Kent, the invaders became firmly and generally possessed of the territories described in a former Gazette, imposing their own names on every district, place, and boundary, and speaking only their own language wherever they were spread. The mass of the Britons were forced to submit to the yoke; but some emigrated to Armorica or Bretagne, others to Cornwall and Wales, and some, it is supposed, even to Holland. The traditions respecting the Cwmry who sought refuge in Wales are the

best preserved; and the songs of several of the bards who there predicted the restoration of the British dominions, and animated the fugitives, have been handed down to our day. These prophecies were not fulfilled, though the Saxons going to war with each other afforded a favourable opportunity, had the Britons been strong enough and united. About 568, Ethelbert the fourth successor of Hengist, at the age of sixteen, invaded Ceowlin king of Wessex, who was defeated at Wimbledon, in the first battle that occurred between the Anglo-Saxon sovereigns. Ceowlin, in his turn, was more successful in his designs upon Sussex, which kingdom he seized on the death of its king Cissa in 584, and annexed to Wessex. But his nephew Ceolric conspiring against him, he was defeated at Wodnesborg, Wilts (which village stands on the remarkable dyke called Wansdike), and the domestic feuds that ensued enabled Ethelbert not only to preserve Kent, but at length to gain that insular authority among his fellow kings, which they called the Bretwelda, or Ruler of Britain.

This curious title is given by Bede, in succession, to Ella of Sussex; Ceowlin of Wessex; Ethelbert of Kent; Redwald of East Anglia; and Edwin, Oswald, and Oswy of Northumbria; but the nature of its powers and duties cannot now be ascertained, and we are ignorant whether it was assumed by him who thought himself strongest, or was granted by common consent, in any national council—whether it was an imitation of the British Unbenneth, or a continuation of the Saxon custom of electing a War-cynig.

But whether under a Bretwelda or a simple king, the Britons, in many places, still offered occasional and bloody resistance to their oppressors. Ethelfrith, the grandson of Ida in Bernicia, gave the northern Britons and their sovereign Aidan a terrible overthrow at Degastan (supposed to be Dalston near Carlisle, or Dawson near Jedburgh); and Ceolwulf, the West Saxon king, was almost uniformly victorious over the assertors of their independence. Four or five years after the defeat of Aidan, we find Ethelfrith again engaged in war with the Cwmry. He reached Chester through a triumphant course, and about A. D. 607, or thence to 612, committed the dreadful slaughter of twelve hundred monks of Bangor, whom he discovered away from the protection of the Welsh shore of Brocmawling of Powys, and put to the sword while praying for the success of their countrymen. It was upon this occasion that ancient Bangor was destroyed, and an irreparable injury done to British literature by the demolition of the noble monastery in which the most precious monuments of the ancient Britons, the collection of ages, utterly perished. Now was the condition of the unsubdued part of the population miserable indeed. Subsisting in the most secluded recesses of the island, where rock, or forest, or marsh supplied some means of defence; they were the common butt of all martial and predatory enterprise; and Angles, Saxons, nay even Gwiddelians of Ireland, incessantly assailed and preyed upon the wretched but enthusiastic strugglers for liberty.

About the middle of the sixth century, Procopius relates a fact which proves not only the bold and adventurous spirit, but the increased power of the Scandinavian colonists of England. We allude to the victorious expedition of the East Anglians against the Varni, a nation on the Rhine, whose king Hadiger had slighted the sister of the Angia prince. More than half a century posterior to this romantic and remarkable event, which compelled the monarch of the Varni to repudiate his wife, sister to Theobert king of the Franks, and to marry the lady who he had offended, namely about the year 611, Redwald, one of the Bretweldas above mentioned, king of these Anglians, annexed Deira to Bernicia, and forced its infant monarch Edwin, the son of Ella, to fly into Wales, where he was educated. This Edwin was the cause of a future war between Redwald and Ethelfrith, in which the latter fell, and the highest authority was assumed by his conqueror. Edwin was restored, and finally became Bretwelda; and the Saxon kingdoms were at this period continued by his success, uniting two under his own rule, in their reduced number of a hexarchy. In 633, Edwin was slain in a battle at Hatfield Chase, Yorkshire, where Cadwallon, the son of his ancient protector in Wales, and Penda king of Mercia, defeated his hosts with tremendous carnage. The victors then wasted Northumbria; and its division, once more, into the kingdoms of Bernicia and Deira, restored the heptarchy. Cadwallon secured the Angles and Saxons, and victory in fourteen great battles and sixty skirmishes, seemed to promise the fulfilment of the Cwmry prophecies; but uncertain was the issue of the fight in these tempestuous times: Oswald, who had succeeded to the throne of Bernicia, threw and killed him (A. D. 634), on the banks of the Denise, probably the Eneburn, and the hopes of the Britons were crushed for ever.

Penda, the quondam associate of Cadwallon, continued his career, and raised Mercia to great importance, though he was sixty years of age at the time that Edwin was routed. In 642 he attacked Oswald, and slew the Northumbrian king at Ouseby, Shropshire, in the thirty-eighth year of his age and ninth of his reign. The Mercian conqueror hewed his corpse into pieces, and exposed the mangled remains on stakes. He then attempted to burn the royal city of Bebbanburgh, but a shift in the wind caused the flames to revert upon the besieger. Satiated with ravaging Northumbria, he next turned his arms against the troops of East Angles, under Sigebert son of Rædwald (the supposed founder of that school where the university of Cambridge arose). Sigebert, drawn from his literary and legislative employment in a monastery, which he had founded, and Ecgric his kinsman, to whom he had consigned a portion of the clasp of royalty, were both slain. At the age of eighty, the fierce Penda, the destroyer of five kings, finished his sanguinary life, being beaten by Oswy, the successor of Oswald in Bernicia, at Wimbildred near Leeds. The battle took place in 655, and the Mercian

\* Abridged from Mr. Sharon Turner's admirable History of the Anglo-Saxons.

† Heptarchy was an erroneous appellation, given in consequence of the kingdoms of Deira and Bernicia being classed as one under the name of Northumbria, thus reducing the whole number to seven.

the Mercians died with their veteran and cruel leader. Mercia was joined to the dominions of Oswy, was set aside as illegitimate, and the younger Egfrid repelled an invasion of the Scots, and himself invaded Ireland. That country was miserably spoiled by Boorht, the Northumbrian general; the lands of Bregh were plundered, and many churches and monasteries destroyed. But the natives fought bravely, and the Angles retreated from a country even then celebrated for literature and civilization. Egfrid was killed at Drumnechton, in the following year, while carrying a new war into the territories of the Picts, and the kingdom of Northumbria rose no more to its former eminence—the Irish and Scotch immediately disclaiming its preponderance, and Wessex and Mercia mounting into superiority.

Having now brought the history of the Octarchy to the accession of Alfred, who succeeded his brother, we consider this a fit period for a pause, though we shall have to go back to several princes whom we have already mentioned, in order to describe their connection with that important event, the introduction of christianity.

We ought, before concluding this sketch, however, to record, that in 664, a terrible pestilence desolated Britain and Ireland; and induced many of the natives to emigrate. Among these Cadwaladr, the son of Cadwallon, and the last of the Cwnry princes, accompanied a body of the Welsh to Bretagne, and thence went to Rome and devoted himself to religion. The fabulous histories from Arthur, in the British chronicles, end with him.

#### BRITANNY.\*

"But, to return to my room, suppose me seated by a large old oak chimney, the wood burning upon iron dogs, and casting a red gleam around, that serves to lighten the gloom and dispel the fumes of the apartment. The walls, from united effects of time, smoke, and filth, send forth a disagreeable musty smell. The plate upon which I write, retains the dirt of any generations; the floor is eaten by worms, and inhabited by fleas, that sting disturbers of their mouldy retreat.

"The bed, (which is made by being beaten with an old broom-stick, left constantly upon a bolster,) is the only tolerable accommodation, and even that is rendered obnoxious, blankets of great antiquity, that have no known ablution, and are daily exposed to the tossing of a servant girl, whose face, dress, and apparel, are literally disguised in dirt. This poor simple creature is very grating, and, like a kindly plant that grows up amidst noisome weeds, has much dross in her nature. She has unluckily

taken a fancy to me, which she has expressed more than once in her own manner, by giving me a hug, or a kiss so suddenly, that I could not get out of her way. In the midst of all this we fare very well, with the exception of the sandy sour bread, which is almost intolerable. Our plates, &c. I am obliged to wash before we use them, as cleansing with water is considered somewhat superfluous in Brittany. But to give you a complete idea of a domestic menage in this country, although, perhaps, beneath the dignity of a traveller, you must descend with me into the kitchen or common hall of the inn: if we get down the tottering staircase without falling, it is well; but certainly not without our gowns doing the office of a broom, and clearing away a little of the superabundant dirt. The kitchen has no flooring but the substantial earth. When it rains, the kennel from the street runs over through the door, and makes a soft mud carpeting. Great oaken beams form the ceiling, from which hang depending the spoils of the field, exhibiting all sorts of game, besides fowls, joints of meat, &c. A large chimney, that would hold a dozen people, is filled by black boiling pots, that hang above the burning faggots. Near the fire-side stands the landlady's bed, supported by a hen-coop full of little chickens. In the centre of the room, there is, as usual, a convenient slush pool, and close to it a long oak table, black from time and grease: there the viands are prepared; and whilst many an humble traveller is regaling at this household board, they draw the entrails from fowls, &c. which, to save trouble, are thrown upon a pile of like delectable combination, in one corner of the room. The solitary window retains but two unbroken panes of glass; to supply the rest, rags are hung up to keep out the weather. Assembled in this chaos of filth—this combination of villanous smells, are six or seven women, who all seem cooks, and from their dress and fire-burnt faces, look like so many infernal beings. The little maid is a sort of drudge to the head-cook, a woman nearly eighty years old, who exercises her authority in the querulous tones of peevish age; her decrepit form, and withered arms, (the protruding reins of which are visible in spite of a thick coating of dirt that encircles them, and seem starting through her dry and shrivelled skin,) confer on her the appearance of presiding hag at the midnight orgies of the fiends.

"I am persuaded my illness did not arise merely from fatigue, but more probably from the dangerous practice they have in this country, of making one sleep in linen so extremely damp, a thing to which English people are not accustomed; although, I am convinced, habit may reconcile such a practice without any fear of dangerous consequences; for it is surprising in what a state of humidity the people both of Normandy and Bretagne wear their linen, and receive no injury from it whatever. I do not feel quite comfortable in the prospect of our tour, as I find a certain complaint, called *la gale*, is very general here; but

there is nothing surprising in this, if we consider the manner in which the Bretons live.

"The description I have attempted giving you of their dirty habits, is by no means an exaggerated picture. I can claim no merit in my relations to you, but that of their entire truth; if I am uncertain or doubtful of any point, I pass it over in silence, lest I should assert falsehood, and I know not what pleasure or credit can arise from becoming a detailer of lies. I should deem it not only unworthy in myself, but likewise an affront to the person I addressed, by using my own credit with them to attempt imposing upon their understanding, when they had not the power to satisfy themselves in ascertaining the truth."

We shall conclude with one other extract, the observations applicable in common to all the people of this province.

"The Bretons do not resemble in countenance either the Normans or French, nor have they much of the Welsh character. They are a rude, uncivilised, simple people, dirty and idle in their habits. Their costume is generally a broad flapped hat, beneath which their hair hangs long and loose. a coat lined with scarlet, and sometimes the upper part of the coat of dark mulberry colour, and the other lower half or skirts of the same colour, but of a faded tint, this diversity appearing to be entirely the effect of taste or choice, and not that of necessity; a white waistcoat, lined also with scarlet, and a broad belt round the waist, corresponding with the colour of the lining, or sometimes plaided, like a Scotch cloak. The goat-skin dress is also very commonly worn, particularly in Bas Bretagne. Very few go barefooted; wooden shoes, being generally used by men, women, and children. The women are invariably dressed in the peculiar costume I have described; it differs here and there, but not importantly, in some of the districts. Many of the women of the very poorest kind, wear this dress till it becomes so dirty, patched, tattered, and ragged, that you can scarcely trace what it had originally been; and I have seen several children so wretchedly off for clothing, that they run about almost in a state of nature. The women who appear tolerably respectable, and are dressed decently in their singular costume, look florid and healthy; while those attired in the ragged garments, bear a squalid and meagre aspect: this arises, I am induced to believe, from the greater dirt and poverty of the latter class.

"The chestnut abounds in Brittany; there are many large forests composed entirely of that tree: their produce, boiled in milk, supplying a means of subsistence for the poor during the greater part of the year. The people collect the chestnuts in sacks, and pile them up within their cabins: several families are even so needy, that they seldom taste the luxury of bread; but these are amongst the children of wretchedness in the extreme degree. I am informed that, in the neighbourhood of Brest, the lower orders resort to acorns, as well as chestnuts, for food, which have some nutritious quality when

Continued, from Mrs. Stothard's Tour.

boiled in milk. The Breton houses (excepting in the towns) are generally built of mud, without order or convenience. It is absolutely a common thing, in Brittany, for men, women, children, and animals, all to sleep together in the same apartment, upon no other resting place, than that of the substantial earth, covered with some straw. We once saw, near Josselin, a man drive into his cabin a cow, and a horse, followed by a pig, and afterwards entering himself, he shut to the door.

"I can confidently aver, from my own observation of the Welsh and the Bretons, that the latter are by no means so civilised, so industrious, so rich, or well being, and are in all respects inferior to the Welsh. Indeed, they do not appear as if springing from the same origin, and are but one degree above nature in an almost savage state; while their dirty habits, (too filthy to bear description,) and their wretched manner of living, sink them in a great measure, below the rank of human beings. The Bretons have no bards, no poetic legends, no traditions, like the Welsh, which, however wild or improbable, display the genius and imagination of that simple and venerable people."

Having taken this general glance at our subject, we may now look a little to particulars; and shall begin with the portrait of the abbess of the convent of St. Ives, at Rennes, where young ladies, English as well as French, are received for board and education. Mrs. S. was desirous of seeing this establishment, and gives the following account of her visit:

"I pulled the bell, determined to make an enquiry relative to their terms an excuse for my visit. A nun spoke to me through the little grating, and giving me a key, desired me to proceed along the gallery, and unlock the first door, begging me not to take out the key, and to be sure and shut it after me as soon as I should be in the apartment. I obeyed her injunctions, and found myself in a lofty room, that received light from some iron barred windows immediately below the ceiling: on the opposite side a large iron grating was covered within the bars by a black curtain. Several passages from the Testament were inscribed upon the walls. A solitary table and chair constituted the whole furniture of the room. I read all the texts, looked at the grating, and sat down, wondering no person appeared, as the nun had assured me I should be immediately received by the mother, for so she called the abbess. After waiting very patiently for a considerable time, and no one appearing, I thought of making an unceremonious retreat; but found, to my surprise, that I was fairly a prisoner, for there was no handle to the lock, or any means of opening the door within this apartment. After waiting thus incarcerated more than half an hour, the curtain began to move, and I perceived through the iron bars a figure dressed in white, enveloped with a black veil. I presently understood, that this was the Lady Abbess, who, I conjectured, to increase the awe of her appearance, had kept me so

long expecting her coming. She made me sit down before she unveiled, and was polite enough to say, she was glad to see me, even if I had no other motive than that of coming to pay my respects to the superior of such a convent as hers. She then threw up her veil, and exhibited the countenance of a very cross old lady, who looked more accustomed to scolding than devotion. But, as the law of physiognomy is sometimes rather hard judging, I determined to observe her manner, ere I set down the sharp nose, and contracted brows, as the infallible marks of a scold. Before I left her, I was however confirmed in my physiognomical observations; for the excessive sharpness, and peremptory examination of the mother relative to who I was, &c. convinced me she did not rank amongst the order of gentle devotees. She told me a little of her own history, her misfortunes in the Revolution, and, amongst other things, avowed, that the Virgin Mary had twice appeared to her during her sufferings for the faith. 'The Virgin Mary, madam!' said I, not a little surprised. 'Aye, the Holy Virgin,' replied the old lady; the blessed protector of religious houses; the mother of our Lord, by whose side the nuns will sit in heaven, and the abbesses next to him on his right hand.' This was quite enough for me: I soon bid her good morning, and went away, reflecting how well the old lady had settled the precedence of heaven. But I find such visions and privileges are very common with the superiors of religious houses."

A story of a nun near Vannes will form a fit sequel to this.

"She (another nun, says Mrs. S.) related to me the history of a nun living in a convent near Vannes, who is called a saint elect, but whose adventures appeared very melancholy to me. She was the daughter of a noble family, who consented to give her in marriage to a young gentleman greatly attached to her. A short time before the appointed nuptials her father died, and her mother survived his decease but a few days. The young lady considering this a warning from Heaven, that her marriage was adverse to the will of God, became melancholy, and believing herself chosen a spouse of Christ, determined upon taking the veil. Her lover, disappointed in all his hopes, declared, that if the lady became a nun, he would not survive her loss. She persisted in her design, notwithstanding her own affection and his melancholy state of mind, and the unfortunate man, in a fit of despondency, put a period to his existence. The nun, far from feeling any regret on the subject, gloried in having resigned all her hopes, by devoting herself to God, and at present bears the reputation of a saint, from wearing the hair shirt, to fret her skin, and practising every kind of austerity.

"The Abbess very freely permitted Mrs. S. to converse with any of the old or supernumerary nuns, but the good lady was too cautious to extend this kind privilege to the younger sisters, or to the novices, fearing, I imagine, that the very sight of a young man might make them dream of the

world again; a caution they would willingly have dispensed with, as they did not all gratifying their curiosity by taking a peep at him from behind the columns of the cloister during the time he was employed."

The Romish fashions in Normandy are of a similar stamp.

At Bayeux, Mrs. S. relates—"I was walking with an English lady, this morning, who resides here, when I observed some priests coming out of a baker's shop, with the holy water. I asked my companion if she knew what they had been doing there. The lady said, she had no doubt that they had been sprinkling. When I enquired the meaning of this ceremony, I found that some of the Roman Catholic clergy practise a system of extortion, peculiar to their church, by going into the shops, and sprinkling the holy water, to give a blessing in the master's trade; for which obliging act, they receive a compensation in money. The priests have many other methods of extorting begging. If you go into a church or cathedral and take a chair, even while the mass is performing, they come up to you, and solicit some trifle in payment of your seat; and soon after another priest will present you with a dish, into which you show whatever money you please. To whom these collected sums are given I do not know; but I dare say they are considered too sacred to be suffered to depart from the church."

(To be continued.)

#### CUSTOMS, &c. OF AMERICAN INDIANS.

(Continued from our last.)

"It very seldom happens that a man condescends to quarrel with his wife, or abuse her, though she has given him just cause. In such a case the man, without replying, or saying a single word, will take his gun and go into the woods, and remain there a week or perhaps a fortnight, living on the meat he has killed, before he returns home again; well knowing that he cannot inflict a greater punishment on his wife for her conduct to him than by absenting himself for a while; for she is not only kept in suspense, but uncertain whether he will return again, but is soon reported as a bad and quarrelsome woman; for, as on those occasions, the man does not tell his wife on what day or at what time he will be back again, which he otherwise, when they are on good terms, never neglects to do, she is at once put to shame by her neighbours, who soon suspecting something, do not fail to put such questions to her, as she either cannot, or is ashamed to answer. When he at length does return, she endeavours to let him see by her actions, that she has repented, though neither speak to each other a single word on the subject of what has passed. And as his children, if he has any, will on his return hang about him and soothe him with their caresses, he is, on their account, ready to forgive, or at least to say nothing unpleasant to their mother. She has, however, received by this a solemn warning, and must take care how she behaves in future, lest she shall

time her husband should stay away altogether and take another wife. It is very probable, that if at this time they had no children, he would have left her, but then he would have taken his property with him at the same time.

"On the return of an Indian from a journey, or long absence, he will on entering the house, say, 'I am returned!' to which his wife will reply, 'I rejoice!' and having cast his eyes around, he will enquire, whether all the children are well, when being answered in the affirmative, he replies, 'I am glad!' which for the present is all the conversation that passes between them; nor does he relate any thing at this present time that occurred on his journey, but holds himself in readiness to partake of the nourishment which his wife is preparing for him. After a while, when the men of the village have assembled at his house, his wife, with the rest, hears his story at full length.

"Marriages are proposed and concluded in different ways. The parents on both sides, having observed an attachment between two young persons, negotiate for them. This generally commences from the house where the bridegroom lives, whose mother is the negotiatrix for him, and begins her duties by taking a good leg of venison, or bear's meat, or something else of the same kind, to the house where the bride dwells, not forgetting to mention, that her son has killed it; in return for this the mother of the bride, if she otherwise approves of the match, which she well understands by the presents to be intended, will prepare a good dish of victuals, the produce of the labour of *woman*, such as beans, Indian corn, or the like, and then taking it to the house where the bridegroom lives, will say, 'This is the produce of my daughter's field;' and she also prepared it. If afterwards the mothers of the parties are enabled to tell the good news to each other, that the young people have pronounced that which was sent them *very good*, the bargain is struck. It is as much as if the young man had said to the girl, 'I am able to provide you at all times with meat to eat!' and she had replied, 'and such good victuals from the field you shall have from me!' From this time not only presents of this kind are continued on both sides, but articles of clothing are presented to the parents by each party, by way of return for what they have received, of which the young people always have a share. The friendship between the two families daily increasing, they do their domestic and field work jointly, and when the young people have agreed to live together, the parents supply them with necessities, such as a kettle, dishes or bowls, and also what is required for the kitchen, and with axes, hoes, &c. to work in the field.

"The men who have no parents to negotiate for them, or otherwise choose to manage the matter for themselves, have two simple ways of attaining their object. The first is: by stepping up to the woman whom they wish to marry, saying: 'If you are willing I will take you as wife!' when if she answers in the affirmative, she either goes with him immediately, or meets him at an appointed time and place.

"The other mode of celebrating marriage will appear from the following anecdote.

"An aged Indian, who for many years had spent much of his time among the white people both in Pennsylvania and New Jersey, one day about the year 1770 observed, that the Indians had not only a much easier way of getting a wife than the whites, but were also more certain of getting a *good one*; 'For,' (said he in his broken English,) 'White man court,—court,—may be one whole year!—may be two year before he marry! well!—may be then got *very good wife*—but may be *not*!—may be *very cross*!—Well now, suppose cross! scold as soon as get awake in the morning! scold all day! scold until sleep!—all one; he must keep *him*! White people have law forbidding throwing away wife, be *he* ever so cross! must keep *him* always! Well! how does Indian do?—Indian when he see industrious Squaw, which he like, he go to *him*, place his two fore-fingers close aside each other, make two look like one—look Squaw in the face—see *him* smile!—which is all one *he* say, *Yes*! so he take *him* home—no danger! *he* be cross! no! no! Squaw know too well what Indian do if *he* cross!—throw *him* away and take another! Squaw love to eat meat! no husband! no meat! Squaw do every thing to please husband! he do the same to please Squaw! live happy!'

The Indians pay great respect to old age; of which the following simple story is a fine example.

"In the year 1765, the great body of Christian Indians, after having remained sixteen months at and near Philadelphia, were permitted to return to their own country, peace having been concluded with the Indian nations, who still continued at war notwithstanding the pacification between the European powers. They resolved to open a path through the wilderness from the frontier settlements beyond the Blue mountains directly to Wyoming on the Susquehanna. This path they laid off and cut as they proceeded, two, three, or four miles at a time, according to the nature of the ground and the convenience of water, bringing up their baggage by making two or more trips, as they had no horses to carry it. Having arrived at the great Pine Swamp, then supposed to be about fourteen miles wide, it was found very difficult to cut a passage on account of the thickets and of the great number of fallen trees which encumbered it; they were, besides, unacquainted with that part of the country. An old Indian, however, took the lead, and undertook to be their guide. After a tedious march of near two weeks, attended with much labour, he brought them across the swamp, to the large creek which borders upon it on the opposite side. There they found a very steep mountain, through which no passage could be found either above or below. Discouraged at the prospect before them, they now saw no alternative but to return the same way they had come, and take the route by Fort Allen to Nescopeck, and

so up the Susquehanna to Wyoming, a distance of nearly one hundred miles round. In this difficulty, it fortunately struck their missionary, Mr. Zeisberger, that a certain Indian named David, who was one of their party and had followed them all the way, was acquainted with that part of the country, and might, perhaps, be able to point out to them some better and shorter road. He soon found that he was not mistaken. David was perfectly acquainted with the country, and knew a good road, through which the party might easily pass, but not having been questioned on the subject, had hitherto kept silence, and followed with the rest, though he knew all the while they were going wrong. A dialogue then took place between him and the missionary.

"ZEISB.—David! You are, I believe, acquainted with this country; perhaps you know a better road and a shorter one than that which we are going to take.

"DAVID.—Yes, I do; there is such a road, which we may easily get through, and have a much shorter distance to travel than by that which is proposed; I am sure of it.

"ZEISB.—What, David! we were all going wrong, and yet you are with us?

"DAVID.—Yes, 'tis so.

"ZEISB.—And yet you said nothing, and followed with the rest as if all had been right.

"DAVID.—Yes; the guides are somewhat older than myself; they took the lead, and never asked me whether I had any knowledge of the country. If they had enquired, I would have told them.

"Will you now tell them?

"DAVID.—No, indeed; unless they ask me. It does not become an Indian to instruct his elders.

"The question was then asked him at the instigation of Mr. Zeisberger, when he immediately told them that they must all return to a certain spot, six miles back, and then direct their course more to the north east, which would bring them to a gap in the mountain, where they could pass through with great ease. They did so, and he followed them, and being now desired to take the lead, he did it, and brought them to the very spot he had described, and from thence led them all the way to Wyoming. This difficult part of the road, in the swamp, has been since called *David's path*, and the state road now passes through it."

(To be continued.)

*A Syriac Grammar, principally adapted to the New Testament, in that Language.* By Thomas Yates, author of "Indian Church History." "A Collation of an Indian Copy of the Hebrew Pentateuch," &c. &c. pp. 120. 8vo.

The lovers of Oriental literature must, we think, be highly gratified by this publication of a Syriac and English Grammar, the first, we believe, that has been printed in this country. It appears to have been composed by the author at the request of the late Rev. Dr. C. Buchanan, at a time when he was engaged with that gentleman in preparing an edition of the New Testament, for the use of

\* "The pronouns in the Indian language have no feminine gender."

the Syrian Christians in India. The typography is very beautiful, and the rules of grammar arranged with great perspicuity. The examples are given in Syriac and Roman letters; a practice important in works of this kind. To those who have acquired some knowledge of the Hebrew tongue, the work before us will be extremely valuable, as one by which they may easily obtain a greater insight into these kindred dialects; for they are intimately connected. Among the examples for praxis to exercise the student, we observe copies of letters which passed between the author and the Syrian Archbishop of Jerusalem, during his late stay in London, in the modern Syrian language; a sufficient recommendation of the ability of the author for the volume which he has published. Such works do honour to the British press. Prefixed is a modest dedication to the Right Reverend the Bishop of Calcutta.

### Wine and Mustina.

OR AFTER DINNER CHIT-CHAT.

By a Cockney Grey Head.

#### CHAPTER IX.

*Old Slaughter's. (Continued from our last.)*

It would not enter the minds of the young folks in this age of intelligence, when every minor shopkeeper contrives to expend a little fortune on the education of his sons and daughters, that in the unlettered days of their grandfathers, the accidental appearance of a man of superior talent, even at the table of an opulent trader, produced a general silence among the other guests.

This was not the age of science; hence the sounding name of a philosopher was incomprehensible; that of a poet was wrapt in wonder, and the name of a wit was clothed with terror. Reading, the life of intellect, had made little progress; for who could read, when there were no books? and we old folks can remember when the congregated volumes of all the traders in a parish would scarcely suffice to stock a petty circulating library, in one of the half tenanted narrow streets, in Old St. Mary-le-bonne.

It is yet a maxim with some remnants of the old school of curmudgeon ledger-men, that to buy a picture is to "hang your money on the wall." The same narrow notions applied to books—"What, lock your money up on shelves!"

The stock of literature, with those who accumulated *stock*, besides the Holy Bible, usually consisted of John Bunyan's *Pilgrim's Progress*, the same lively writer's *Holy War*, Fox's *Book of Martyrs*, the *Old Whole Duty of Man*, a mutilated *Baker's Chronicle*, some odd volumes of *Jacob Tonson's duodecimo Spectator*, and *Herman Moll's Geography*, commonly with torn maps, the *Tale of a Tub*, *Milton's Paradise Lost*, (never read,) *Culpepper's Herbal*, or *Every Man his own Physician*, (the good lady's book, under lock and key), the *Complete Letter Writer*, belonging to Miss, with *Robinson Crusoe*, *Robin Hood's Garland*, and the *Seven Champions of England*, the property of *Jem and Jack*.

Yes, gentle reader, reading has made a wonderful revolution in manners: every pretty miss can name the stars; and Newton, Descartes, and Tycho Brahe, are known to have been neither Egyptians, Romans, nor Greeks; and the boys and girls may account for an eclipse, without being checked by papa with, "Such things are presumptuous, child." In short, your magazinists and reviewists, your essayists and journalists, have brought your book-makers into vogue, until, such are the fruits of this scribbling era, "we philosophers, poets, and wits," as a learned friend of mine has said, "no longer make a stir as heretofore in a party, like unto a stone, that, thrown into quiet water, maketh a disturbed circle from bank to bank;"—no, "we make our entrance and our exit much like other harmless folks;" and this *Credite Poster!* in the year of our Lord eighteen hundred and twenty!—"So runs the world away."

Doubtless then, sixty or seventy years ago, the club at Old Slaughter, which numbered in its list of members men such as I have named, with many other originals, such as another thousand years may not congregate together again, beneath a tavern roof, could not escape the whispers of the neighbourhood. Every absurd character, every curmudgeon and oddity of St. Martin's parish, stood in awe of these famed *conversers*. Enough got wind of what passed at their merry meetings to scare many a money-scraping rapacious old hux; and Hogarth's satire was ill-naturedly, or at best erroneously applied, to persons whom he neither knew nor wished to know. Indeed his moral pencil was governed by too generous a soul to seek applause by wounding private feeling. His characters, like those of *Harry Fielding*, his beloved friend, though "stamped in nature's mint," were not personal. In truth, there was too much of the *outré*, too much of oddity and humour, in every class of life, in every square, street, alley, and lane of "London town," to stult the club to beat for game in the circumscribed "fields of old St. Martin's."

"Tis true, that our club got a bad reputation," said my uncle Zachary, when he was putting on his mourning to attend the funeral of the last surviving brother member, and not the least in worth—"tis true; but it were false to maintain that the club deserved any man's evil word, saving some two or three who had their frailties, which God in his mercy may forgive—for politics, alas! and then he sighed, the good old man! "has been the bane of many a hopeful genius." I could guess whom he had in mind, for there was one, *Charles Churchill*, whose satirical phrenzy was the cause of much sorrow to other worthies of the old rendezvous, although he never named those "gone to their account," whose memories begot these sorrowful reflections.

In the same strain I have heard my great uncle say, in defending the reputation of the witty fraternity—"No, sir, ill-nature had no seat at our table. It is true that *Fielding*, the lively rogue, would sometimes entertain us at the expense of some well known,

harmless, hum-drum proser, who filled a box in the coffee-room, or others; and above all, some overbearing, purse-proud miscreants, who frequented the house, against whom he indulged an ever increasing antipathy. O! what a look of indignation did he assume immediately, on metamorphosing his features from the vacuity of a grovelling man of wealth back again to his own intelligent countenance, after playing the consequential grub, in the act of asking, when a bright man of letters or genius has been praised, the sickening question—"How much can he earn? What *may* he be worth?"

"There was a group of these," said my uncle, "that always sat in the box nearest the bar, to the annoyance of Mrs. Slaughter and pretty Kitty, who detested the sight of them. These had served for overseer, churchwarden, and presided at the Court of Requests, and other such-like offices, tho' sought by self-important, vulgar, rich money makers, who thereby pry into the secrets of every neighbour's affairs."

These Hogarth determined to draw; and under the disguise of an old farmer, a country cousin of mine host's, procured by connivance of old Slaughter, who delighted in a joke, admittance for a few evenings within the bar: he there, at his ease, obtained capital limnings of every man of them; and surely (for I have seen them) such a group of senseless, malignant plagues, was never sketched but by Hogarth's wondrous hand.

Old Slaughter peeped over the painter's shoulder just as he had given the last touch of his incomparable crayon: but when, in the exuberance of his humour, he wrote in capitals over the "many-headed monster,"

"GREAT HEADS AND LITTLE WITS,  
LITTLE HEADS AND THE DEVIL A BIT—"

The worthy landlord burst into such a proxiom of loud laughter, that nothing could have prevented detection but the sudden falling of a magnum bonum punch bowl, shaken by his fat sides from the shelf, accompanied with at least a dozen pot and pint tumblers, gingerly placed one on another in a broad pyramid.

Mrs. Slaughter was reddening into anger, more from sudden fright than ill humour, for she was an excellent soul, when the angel Kitty, as *Laurel* designated her, from her gentle interference in behalf of the waiters in disgrace, and what can be denied to innocence and beauty, and for some other reasons best known to themselves, held up her finger to her aunt with such a significant look as could not be mistaken. The affair in a moment took a right turn, and Slaughter, his wife, Miss Kitty, and farmer Hogarth, all joined heartily in the laugh.

The grovelling group in the box were astounded; one, with his accustomed phlegm, opened the bar-door to speculate upon the amount of the damage; when picking up a piece of the bowl, he exclaimed, "It's time for landlords to laugh, when a few guinea bowl is dashed to pieces." "We were not laughing at the broken bowl,"

said old Slaughter, sneeringly. "What then canst thou so much mirth?" demand'd another questioner. "We were laughing at the calves' heads," said old Slaughter, "were we not, cousin?" addressing himself to Hogarth. "Ees," said the wag, adding, in a country dialect, "ods boddikins, gentlemen, its a mortal funny story, but cousin Slaughter musn't tell it now."

William Gostling the antiquary, was dubbed Billy Goose-quill by old Thornhill,<sup>a</sup> who without much wit, was witty on every body, finding a nick-name for each member of the club. Gostling, whose affairs frequently called him to London, made old Slaughter's his hotel for many years in succession, and retained a room on the second floor, which was pleasant enough, as the tall green trees in the garden behind bowed against his windows. This apartment was well stocked with black lettered lore, pamphlets, old histories, dramatic works, and other literary treasures, some of which were extremely rare. Many a day have I passed there when a young man, rummaging among his manuscripts and curious tracts, and can remember several scraps of Hudibras written with Butler's own hand; on the margins were sketches of certain characters in pen and ink, stamped with puritanical phrases, such as no modern conventicle could match. Butler, we are told, was no mean artist. Hogarth delighted to look at these, and said that some of the heads, particularly one, supposed to be a caricature of his master, Sir Samuel Luke, was drawn with the spirit of Leonardo da Vinci. Indeed, my uncle Zachary once taken his friend the comic painter, with having taken a hint from one of Butler's puritans, for the clerk, so filthily employed in his celebrated print of the Methodist-chapel. This Hogarth denied, and declared he drew that physiognomy of zealotry and hypocrisy from the life, at a little chapel, on the upper story of a printer's in Bushill Fields. Hogarth, teaucious on the score of originality, gave my uncle a vipe for this, saying, "that right reverend, mitre seeking Gostling has put you on that conceit; but you are both so devilish orthodox, such *bigots* in your way, that I would show you a hundred such gloomy impostors, if you had not sworn never to *open your eyes*, under a "pan-tile preaching-house. So die in ignorance for your pains." This was true enough of my great uncle, for my father used to say, that there were two sins, of commission and omission; that uncle Zac would never have to answer for; namely, for setting his foot in a conventicle, or going to bed, without having toasted "church and king."

Gostling had I know not how many manuscript pages of Mercurius Rusticus, with some other choice matter that never appeared in print, although they relate circumstances more extraordinary than any even in that interesting work—such traits of the times! Such whimsical pictures of the absurdities perpetrated by the religious Jack-puddings and their apostate chief "Old

Noll!" Likely enough, gentle reader, I may some-time afford you a few extracts from certain of these, that could not be perused without amusement; for all that Butler has so happily strung together on his inventive lyre, rare genius as he was, falls short of this liver-veritatis, for sheer absurdity and pious mummeries.

It must be nearly sixty-five years ago; yet though a boy, well do I remember every title of the conversation that once in particular passed at old Slaughter's, between my respected friend William Gostling, and drunken Henley, who kept the mild man on the cold stair case as we were going out together, in a long confabulation, and in a loud hoarse whisper about a quarrel with the bruiser Churchill, who had written a satire upon his nonsensical rant at his chapel in the neighbouring market. You will tell Mr. Bully Churchill from me, that I will kick his br \* ch. Fye, fye! said Gostling, putting his hand gently before his mouth, stifling an oath in his birth; fye Mr. Henley! you are an old man. These quarrels bring disgrace on our holy calling. Henley looked at the good man, less angry than compunctious, and shook his head; his eyes were red with drinking, and he stood mute awhile, an awful personification of frail humanity. Can you spare me the loan of ten shillings, says the orator. Gostling took from his purse a guinea, and put it in his hand. The wretched man looked in his reprover's face with that drunkard's ghastly smile that hides a broken heart. God bless you, said Henley, I'll call and pay you to-morrow. Gostling saw him no more.

Heavenly Father! said my pious friend, and then his voice faltered. I have known these two men, (meaning Churchill for one,) in the meridian of their better days; once innocent and of much promise; men of large perception, and pregnant with wit! Alas! how fallen!

I fear we shall be too late, my young friend, said Gostling, as we quitted old Slaughter's; when looking up at St. Martin's church, and taking out his watch, he observed; bless me Ephraim, I am too fast by half an hour; so he took his time piece into the old shop; in May's Buildings to be set to rights, borrowed another, and off we ported for Buckingham-street, to my uncle Zachary's friend the virtuoso, who was confined with a sciatica, to see a mighty curiosity—the vizor worn by one of the executioners of King Charles.

I cannot describe the cold shuddering I felt on being shown the impression of a thumb, stamped in the blood of the royal martyr on the inside of the mask; a tragical evidence of its being made by the hand that bled the clotted hair, when the murderer's profane tongue proclaimed, "Behold the head of a traitor!" The bloody stamp was obviously impressed, in taking off the cowardly disguise. Gostling, though a zealous anti-jacobite, turned pale as death, and

<sup>a</sup> The notorious brawler, Orator Henley.

<sup>b</sup> The old shop, where the farrier has been shoeing the horse, and the dairy maid churning the butter, for half a century.

pressing the awful memorial to his lips, pathetically exclaimed, "He was despised and rejected! a man of sorrow, and acquainted with grief!"

## ARTS AND SCIENCES.

### NORTHERN EXPEDITION.

The London Gazette of Saturday, contained a brief dispatch from Lieut. Parry, notifying his return from the Polar Sea, into which he penetrated by Lancaster Sound; and specifying the latitude and longitude which the expedition had reached. His success, to the extent it has gone, has afforded much satisfaction; and the safe restoration of himself and companions, (with the exception of one man who died of a chronic disease,) has, even in the midst of our politics, excited a marked sensation throughout the country. He was immediately raised to the rank of a Captain in the navy; and it must be acknowledged, that he has well merited that distinction; while the absence of casualties during so perilous an undertaking reflects honour upon the Commander and upon the Admiralty, for the providence displayed in the outfit, and for the care with which they looked to the welfare of the gallant fellows sent upon this dreary service.

The details of the voyage, so far as they have yet appeared in the public prints, are as follows:—

The Hecla, Lieut. Parry, and the Griper, Lieut. Soddon, entered by Lancaster Sound, proceeded directly over Captain Ross's special chart of land, and reached in the parallel of 74° or 75°, 114° or 115° west, about 650 miles farther than Captain Ross asserted the Polar Sea to be navigable. In 90° they fell in with islands, which continued successively till they reached the extreme westerly point of one nearly in 115°; here winter overtook them, and they turned back several degrees and wintered in a snug harbour in five fathoms water. On the breaking up of the ice this season, attempts were made to proceed westerly; but immense barriers of ice from the Polar Sea to the northward, shut out all hope of succeeding in the parallel of 74°; and before they could return to the eastward and renew the attempt in a lower latitude, the navigable season, which is confined to August and a few days in September, offered no reasonable chance of succeeding this year; independent of which, provisions would not have held out in so precarious and dangerous a navigation for the winter, and the time they would certainly have been frozen up. The existence of a Polar Sea to the westward of "Heerne's River," is uncontestedly established. Mackenzie saw it still further to the westward; and by reference to the map, you will perceive Icy Cape, which most clearly demonstrates the American line of coast.—Experience has taught these hardy navigators, that in the month of August, such a powerful radiation from the land takes place, as to render a channel sufficient to demonstrate the certainty of the existence of a north-west passage, and that a practicable one, but not open to any possible

<sup>a</sup> Sir James Thornhill, father-in-law of Hogarth.

commercial purposes. In 90° the compasses were useless on board; the attraction of the needle was extreme; in one case, it is said 166°."

To this we may add from private information, that the passage of Lancaster Sound, where Capt. Ross (see his map) laid down what he called *Croker Mountains*, was found to be an open channel forty miles broad!

The cold during the winter was excessive; the thermometer (Fahrenheit's) descending to even 52° below zero. The vessels are entitled to the 5000*l.* reward, from having gone to a longitude beyond 110° west of Greenwich.

The newspapers also furnish the annexed further observations, from Aberdeen.

"The Hecla came into our bay yesterday for provisions, and sailed in the afternoon for Leith Roads. Her gallant and intrepid commander, Capt. Parry, accompanied by his astronomer, came on shore at Peterhead on Monday, and passed through here yesterday, to go by land to London. They parted with the Griper in the North Sea, and she is expected up every hour. The Hecla encountered a heavy gale after parting with the Griper, and sustained some damage. Few particulars of their highly interesting voyage have yet transpired, the officers and crew of the vessel confining themselves to casual observations, until their commander shall have laid his journal before the Lords of the Admiralty. We understand that they wintered in latitude 75° N., and in their attempts to explore a passage to the Western Ocean, were as far as 111° W. They wintered in a snug bay, in Lancaster Sound; and did not get clear of the ice till the 5th of August this year. From October till February, or for about 100 days, they were in darkness; but with abundance of wholesome provisions, and other requisite comforts, they passed the time very agreeably. The crew were amused with games of every kind; and occasionally they acted plays for mutual entertainment. As to the main object of the expedition, the discovery of a north-west passage, we cannot yet speak with much confidence. One of the officers with whom we have conversed, entertains not the least doubt upon the subject; but we must wait for Lieut. Parry's observations before we pronounce with certainty. The country will look with great anxiety for the publication of the journal of this voyage. They have been out for about 18 months, having sailed from Sheerness on the 18th May 1819."

We have to add, that such good haste is making with Captain Parry's Journal of the Voyage, that the public may look for its appearance within a month.

#### LITERATURE & LEARNED SOCIETIES

OXFORD, Oct. 28.

The Rev. F. Hudson, D. D. Principal of

\* Upon this point, the very remarkable experiments detailed in our Nos. 196 and 198 will, we think, be found to throw an important additional light; and we recommend them anew to the attention of our philosophical readers. Ed.

Brasenose College, has succeeded to the Regius Professorship of Divinity, void by the resignation of the Right Rev. Dr. Van Mildert, Lord Bishop of Landaff.

Thursday, Oct. 26, the following Degrees were conferred:—

MASTERS OF ARTS.—Rev. J. Hunter, Magdalen College, and Rev. Owen Cleaver, Student of Christ Church, Great compounders; W. H. Darby, Christ Church; J. Netherthorpe Harward, Scholar of Worcester College; Rev. T. Furbank, Lincoln College; Rev. J. Elliott, St. Edmund Hall; Rev. W. Stalman, Fellow of Brasenose College; J. Wither Awdry, Fellow of Oriel College; Baden Powell, and J. Michael Severne, Oriel College; H. F. Sidebottom, and R. Worgan Povah, Fellows of St. John's College.

BACHELORS OF ARTS.—B. Croft Goodison, Worcester College; D. Keyte Sandford, Christ Church; C. J. Plumer and G. R. Paulson, Balliol College.

CAMBRIDGE, Oct. 30.

The Scanlonian prize for the present year was yesterday adjudged to E. Bishopp Elliott, M. A. Fellow of Trinity College.—Subject, *The Omnipresence of the Supreme Being*.

#### SERVETUS.

During the period of religious persecution, every thought that brought with it novelty, or appeared even in science to open a path before untrod, was received with suspicion, and often considered as a dangerous innovation; and too often its propagators were exposed to calumny and hatred. Copernicus, Galileo, and other illustrious men whose names adorn the history of mankind, were marked as victims by the unsparing hand of bigotry—yet posterity has bestowed upon them the wreath of immortality. But the name of Servetus, whose melancholy fate excited throughout Europe the deepest sympathy, still sleeps in comparative obscurity; or he is known better as a religious controversialist, than as a contributor to every branch of philosophy. This unfortunate man, a Spaniard, educated as a physician, entered into the list of theological disputants, during the period in which the doctrines of the Reformation spread throughout Europe. His singular notions on the nature of the Trinity excited considerable inquiry, and the enthusiastic Calvin rushed with ardour to a contest with him; but unable to convince his antagonist by the force of argument, or the voice of friendship, he basely betrayed him to the flames, and left a blot upon his own character, which not all his rigid virtue, nor all his inflexible love of truth, could ever efface.

In the year 1553 Servetus was brought to the stake at Geneva, and with him were burnt all the copies of his "*Christianismi Restitutio*," one only copy excepted, which was secreted and saved by D. Colladon, one of the judges. This celebrated volume is now in the possession of Dr. Sigmond, to whom it was bequeathed by the late James Sims, M. D. whose library contained some

most valuable and rare books, and to whom the Medical Society of London is indebted for its excellent collection. This book was purchased at the Duke de Valiere's sale, for 3810 livres, into whose hands it passed from Dr. Mead, who gave nearly 400 guineas for it, and attempted, in the year 1723, to publish a quarto edition; but at the instance of Dr. Gibson, the Bishop of London, all the copies, in an unfinished state, were seized by John Kent and William Squire, messengers of the press, and most of them burnt: one of these, not half completed, was sold, with Dr. Mead's manuscripts, for 8 guineas. The year following, "*An Apology for the Life of Servetus*," was published. It contains some very interesting anecdotes, with one or two extracts upon the circulation of the blood, which excited considerable curiosity; and as it was known that the only copy of the work, was some short time before, in the library of the Landgrave of Hesse Cassel, it was supposed two existed; but this volume was proved to be the identical one which Dr. Mead had obtained.

The medical and physiological opinions which are advanced, prove this man to have possessed a genius far beyond the age in which he suffered for his attainments. Seventy years before our great Harvey published his discovery of the circulation of the blood, did Servetus give a most accurate description of it; and many of the doctrines in physiology which are even at this day subjects of great discussion, are distinctly stated by him, and amongst others, John Hunter's theory, which has engaged the attention of Abernethy and our modern enquirers—"The life is in the blood," is brought forward, and defended upon the very grounds its present advocates advance it. To introduce into a dry theological discussion the most interesting phenomena of life, the most curious details of natural history, and of general philosophy, requires the mind of no common man; but to succeed in developing the most intricate works of nature, long before the attention of the followers of science has been awakened to the subject, is the province of that genius which sometimes, though rarely, bursts upon the world, to enlighten and improve it. To select the passages which deserve admiration would require time and the greatest attention, lest by an injudicious selection the interest attached to the work might be lessened. Dr. Sigmond (we have been informed) intends printing a few copies for his friends; and probably some one who has time and abilities for the task may make extracts which may merit the public attention, and by avoiding every thing which may appear to encroach upon the boundaries of religious opinions, render a valuable service to the scientific world.

##### ROYAL ACADEMY.

On Monday Mr. Henry Edridge was elected an Associate of the Royal Academy.

## ORIGINAL POETRY.

[By Correspondents.]

## To the Editor of the Literary Gazette.

Helyon Hall.

Sir.—The following Ballad was written to prove what some had denied, the facility of composing a "Tale of Wonder," nearly as fast as it could be written, when advantage was taken of the usual licence granted in those little poems. The small circle to whom it was read has encouraged the writer to send it to your valuable and entertaining Paper.

J. J.

## THE PLAGUE FIEND.

There raged a plague,  
In the town of Prague,  
And thousands fell dead every day:  
'Twas a fiery death,  
To fall by its breath,  
And moulder like ashes away.

The babe and its mother,  
The sister and brother,  
Were flung in one grave without prayer;  
No psalm could be sung,  
No deathbell be rung,  
No priest holy rites could prepare.

For the corpses came fast  
As the leaves on the blast,  
And the priests were themselves swept away.  
The eye of the morning  
Saw blushes adorning  
Maidens who saw not the close of the day.

O'erlooking the town  
Seven knights of renown  
Groaned and wept in Sir Elmor's tower:  
Says one, as I live,  
My right hand I would give  
This dark plague might no longer devour.

Says another, "I swear  
I would willingly spare  
My castle and forest so fine:  
With my sword in my hand  
I would seek a strange land,  
And make a new heritage mine."

Says Lord Rodolph—"Mine eyes  
I can never despise  
That dwell on the charms of my love;  
Yet I'd give up my sight  
With heartfelt delight  
If the plague fiend I thus could remove."

Lord Elmor sighed  
For he thought on his bride,  
And the sorrows would live in her breast:  
My life I declare  
I would willingly spare  
If thus I could save all the rest."

Lo! the Plague Fiend appears!  
His mouth meets his ears,  
And he shows his long fangs with a grin:—  
He's striped and he's dotted,  
He's freckled and spotted,  
His tongue is half out and half in.

His eyeball so burning  
On Elmor's turning,  
He exclaim'd with despite—  
"My Lord I've a right  
To take you at your word,  
On your offer absurd:

But too proud you would be  
If you ventured with me  
Thus willing and free,  
And as others make proffers,  
[I] consider their offers,  
[I] ho' I seek not their eyes,  
And their wealth I despise,

You are seven I perceive,  
And if I may believe,  
Each would much undertake  
For his country's dear sake;  
Nay, there's one would chuse  
His existence to lose  
In a fit of compassion  
That others may dash on  
In what they call health,  
Which is nothing but stealth  
Of a few years longer,  
For they'll never grow stronger;  
But all die without me,  
As much as they flout me.  
I'll impose no hard task,  
A chance only I'll ask.—  
Draw lots—that's all fair—  
And let him leave this air,  
And with me count his gains,  
Who the blackest obtains.  
On this very night  
You may all by moonlight  
In yon hermitage meet,  
So tranquil and sweet,  
Where a stream glides before  
Just one step from the door;  
On that step will I stand  
To take him by the hand  
Who has drawn the black lot.  
On that sweet soothing spot  
He may walk out the last,  
And when I hold him fast  
Not a word shall I say  
As I whirl him away  
From the confines of day.  
I vow to you here,  
I shall only appear  
On that little space,  
And not sully the face  
Of the smooth gliding stream,  
That gives back the moon-beam:  
'Tis a bulwark of brass  
Which I must not pass:  
Nor the Hermitage enter—  
I don't wish to venture;  
For a holy man's bones  
Lie under the stones;  
And were I to draw near  
I should quiver with fear."

The foul one was right  
In his fiendish spite,  
And keen was his knowledge of ill;  
In liberty's cause,  
For religion or laws,  
'Tis delightful to die by our will.

But to perish by lot  
Something chilling has got  
Most deservedly drenched by all;  
To seem thus to Fate  
An object of hate,  
Full well may the stoniest appeal.

Yet this noble seven,  
Appealing to Heaven,  
Accepted the offer he made;  
Their souls, they were sure,  
From his grasp were secure,  
And till ere'ning they fasted and pray'd.

'Tis the silvery beam  
Of the moon on the stream  
Has made seven brave knights look so pale!  
It is not that there,  
The lots they prepare  
Might give cause to the stoniest to quail.

\* All ballad readers are aware that a supernatural being cannot cross a stream. One of Burns' best ballads is founded on this belief.

As soon as each elf  
Was assured that himself  
Had been spared from so dreadful a doom;  
He turn'd eager eyes  
On Sir Elmor's prize,  
Who flourish'd in life's early bloom.

He had drawn the black lot,  
He alone trembled not,  
But as usual was cheerful and free;  
When Sir Elmor spoke,  
'Twas to please—'twas to joke,  
And his converse was brilliant with glee.

The moon beam was strong,  
And his shadow was long,  
And fully pourtray'd on the wall;  
When his friends had departed  
He came on stout hearted,  
Perhaps the least mournful of all.

He thought it was best  
To meet with a jest  
A fate that no wailing could mend:  
He points to the shade  
So strongly pourtray'd,—  
"There's another still coming, my friend."

The fiend thought him serious,  
And looking mysterious,  
Prepared the last comer to claw;  
While by Cynthia's blest beam  
Leaping over the stream,  
Sir Elmor 'scaped from his paw:

The Fiend snatched at the shade  
So clearly display'd—  
It was all he could carry away:  
And no sign of the plague  
In the city of Prague,  
Has ever been seen from that day.

Tho' the sun may shine warm  
On Sir Elmor's form,  
Not a shadow it casts on the ground:  
Like a creature of light  
He beams on the night,  
And his days are with gratitude crown'd.

## SKETCHES OF SOCIETY.

## THE TON OF BAD POETRY.

We have had a good deal of amusement, as well as of trouble, from the offer we made of selling a ton of bad poetry, which had been sent for insertion in the Literary Gazette. Murmurs, hopes of exception, witticisms, have flowed in upon us; and it is but fit, that our readers should share our load, bad and good, as it was entirely on their accounts that we offended the *irritabile genus*, and put it

past a doubt,  
All Bedlam or Parnassus had broke out,  
Premising a remarkable fact, namely, that the publication of our proposal has tended to increase our store by an unprecedented influx during the week, of compositions in which the lines all begin with capital letters, (the only capital quality they have,) and do not all go to the outer edge of the paper; and which therefore we presume to be verse; premising, we repeat, this extraordinary circumstance, which proves that no obstacles can smother poetic ardour—that even the press itself cannot repress it,—we proceed to notice a few of the particulars connected with our "humorous melancholy" condition,

(as Jacques has it.) in consequence of this affair.

Among the squibs which have been shot at us, we were rather tickled with the complimentary conceit of the following couplet, to "the Editors who advertised the sale of a ton of poetry."

You're the greatest of critics whate'er people say;

For you give the whole ton to the birds of the day. *Tom. Mart.*

We suspect from the signature, that this is a plagiarist from some volume of *Martial's* Epigrams; but it is tolerably fair for a pun. Our next poetical correspondence bears the post mark of Lymeington, and, for a disappointed bard, could hardly have been better (tempered), had the Old *Well* been *Hippocrene*—so called, as the classical well know, from its rising out of the ground when struck by a horse's foot, and thus more analogous to the pleasant vein of our good humoured "Candidate," than if he had been angry and kicked up his spa with an *on's* hoof.

On seeing in the *Literary Gazette* an offer for selling a ton of unsuccessful poems by contributors.

Pray spare my ode  
Now in the load  
Of poems bad you write of;  
And pray don't burn  
My sonnet to —, nor turn  
It from your pages quite off.  
Alas! I fear,  
These rounds I'll hear,  
"Throw Ode and Sonnet in the fire;  
They'll make a blaze,  
Emt some rays;  
What worthier fate would you desire."  
Oh! Sonnet bright!  
Oh! Ode whose light  
Far streaming like the western sun;  
I little thought  
When you were brought  
Forth with such pains, to be undone!  
O rigid censors,  
Calm dispensers,  
Of threats that blast bright genius' rays,  
May the ghost of each line  
Whom your breath dooms to pine,  
Tease you and haunt you all your sad days.

AN UNSUCCESSFUL CANDIDATE.

May Euclid preserve us from the ghosts of lines; for he knew the utter hatred which we bore against the realities, when at school.

Our next correspondent is a furious prose dog. He writes post from the north of Ireland, and threatens to ride post to London to horse-whip "every Editor of us." If we dare to insult him by selling his "Stanzas on Martha Rix's Eyes." As we do not chuse to have any thing to do with their lashes or his hushes, we hereby inform him, that the paper is burnt according to his request, and that the subject and sealing was emitted a lustre equally brilliant.

"One whom we have frequently admitted," trusts that such of his productions as we have by us, may not be among those thrown in to make the prodigious weight, especially as they are all light pieces; and as if in-

consciously infected by a punning contagion, he adds, "he hopes to see them still, because they are of a fugitive nature."

Many grown up ladies and gentlemen, as well as a multitude of boarding-school misses, and a tolerable proportion of their governesses, have reclaimed amatory effusions which they had anonymously and confidentially entrusted to us to publish; as if, instead of intrigues, they had been banis of marriage. But what amazed us most among these, was one called for by the author, "Candidus" in person, which Candidus was a footman and a perfect Negro! Who and what his adored was, we could not get this Othello to disclose, though we absolutely promised to insert his verses, if he would favour us with a glimpse of his Desdemona.

One who signs "Andrew," seems such a slashing fellow, that we advise him to change the *se* into a, and annex the patronymic of Ferrara to his name. He who dates from "Bow-Lane Chespaide" is so abusive, that he must be in constant danger of going in a mistake to Bow-Street Covent-Garden. But the fearfullest of the foes whom this inconsiderate business has stirred up, is Angelina. She swears, (that is, she votes in a hurried hand, which would be swearing if spoken,) that if her 'Invocation to Edward' is not returned by return of post to Hackney, we shall have "to bear the bitter fruit of her hate." Perhaps that may be easier than to support the sweet fruit of her love, which she seems to reserve for the aforesaid Edward; but as she is so violent in these extremities, we shall go to the very bottoms of all our hampers to find her verses, rather than be any further hampered about them.

But it would far exceed all decorous limits, were we to notice in detail the prodigious number of applications and hints which have reached us on this (as it appears) so generally interesting subject. Suffice it to say, that it was the quantity burnt, in compliance with the requests of the writers, and not the great brew-house next street to us, which caused the immense volume of smoke last Wednesday, and the alarm of fire that brought all the engines at full gallop to our door, to our great inconvenience and annoyance. Thus martyrs to the public, we certainly expect it will shew its gratitude, by an increased patronage of the *Literary Gazette*,—a publication which so far from being ill-natured (as is falsely asserted by one of our correspondents), is effectually the best-tempered magazine of criticism that ever dealt in that article so extensively. And to let the world into the secret of this characteristic—it is simply, because we think it misfortune enough, to be the author of an unsuccessful work; and therefore, while we state our opinions honestly, we really do not think it necessary to state them so bitterly as to inflict pain, perhaps for life, on a fellow creature. Failure is pang enough; and unless there is something more objectionable than mere weakness or dullness, we do not conceive that a periodical, whose object is to promote literature, has a right to be smart

and severe, or in other words, to flay and carbonado the unfortunate and unhappy. We have, on the dear topic of self, but one more remark to subjoin. It has been endeavored to be whispered, that we have shown a partiality to particular publishers, merely because our diligence has procured us access to the earliest moment to new works: to refute which, we refer to all our past labours, and beg to affirm that we have never written a line from prepossession, nor one in the correctness of which we did not conscientiously believe; and if self-interest can be any guarantee for public impartiality, we may add, that the conductors of this paper, convinced that no other course has raised it to, or can maintain it at the eminence it has reached, have more at stake in its fair fame and consequent success, than all the bookellers in London could give them, were either parties fools enough to suppose, that any benefit could result from doing aught, but speaking with candour, integrity, and truth. We beg pardon for this grave digression; but

Be thou as chaste as ice, as pure as snow,  
Thou shalt not 'scape calumny!

and it is occasionally useful in these censorious times for critics as just as Aristotle (errors of the judgment excepted), to defend themselves against misrepresentation. We promise not to be grave again till Christmas; and though our assertion is serious, we hope we have not been too provy *me*.

#### LETTERS FROM PARIS.

[Anxious by every means in our power to show our sense of the unexampled kindness with which the *Literary Gazette* has been received, and advanced to its present and daily increasing circulation, we have procured the correspondence of an eminent literary gentleman at Paris, who is commenced in this Number, and will, we trust, continue to furnish a pleasing variety in literature, science, and anecdote. We now insert two letters, in order to overtake the series, retarded by an accident a fortnight ago.]

#### Letter I. (Translation.)

Mr. Editor.—An old inhabitant of Paris, begs leave to correspond with you respecting the passing events which he may chance to witness in this capital, and to send you information of all novelties in literature, science and art. It is his intention occasionally to mingle anecdotes with his observations, which will refer to the dead as well as to the living. He will be as impartial as it is possible to be in a capital where one party pulls to the right and the other to the left, and where every thing, even the arts and sciences, assumes a political colouring. He will endeavour to pursue a middle course, and above all, will avoid approaching the *Ultrars* of every description. If, in spite of his efforts to the contrary, he should occasionally incur the imputation of dullness or misfortune in which many worthy writers have been involved, you, Mr. Editor, *ne transerez calamo*, spare the readers of the *Literary Gazette* the annoyance of perusing his remarks. Last, however, you shall deem it necessary to exercise your duty

the very commencement, I will here close my preface, and proceed to the matter.

I know not whether you have heard of the plan, which has been agitated by a party of college professors, of building a Latin city in France.\* Probably you will conclude, as many have done, that it is a mere joke. One of our journals has remarked, that as we do not very well understand each other in French, we must of necessity experience greater difficulty in maintaining mutual communication in the Latin tongue. Terms are now used in the French language, such as the *charter*, *civil and religious liberty*, *independence*, *patriotism*, &c. which a portion of the nation either do not, or pretend not to comprehend. The charter itself, though drawn up in such French as was currently spoken six years ago, has already been interpreted in two totally different ways, which would lead to the supposition, that it equalled in obscurity the Greek of Lycophron. But the projectors of the new city are probably of opinion, that in course of time Latin will be generally spoken and understood, and that, in the mean while, they may proceed to build. They announced their project about a year ago; but it appears that their plan has since been materially improved. They have published a prospectus at Toulouse, which I regret I have not been able to procure, for as yet I know nothing of the subject but from hearsay.

This society of professors, who, whether asleep or awake, dream of nothing but Latin literature, imagine they will succeed in reviving the genius of Cicero and Virgil, if they erect, in the south of France, where the climate resembles that of ancient Latium, a city, all the inhabitants of which, from the magistrate to the collier, shall be required to speak the language of the Romans. Socieisms and barbarisms will probably be punished in this new Rome, as severely as he crimes set down in the penal code. I presume the founders are to pronounce judgment on the language of the citizens; but it is to be feared, that in procuring female inhabitants for their settlement, they will be exposed to no less difficulty than was experienced by Romulus. If it be necessary, in the first place, to obtain a diploma from a university, how can it be expected that ladies will take the trouble to qualify themselves for the right of residence in this new city. Love, to be sure, sometimes works miracles; but what legislator, even though he should possess the severity of Draco, can think of requiring that a young woman, before marrying, should produce proofs of her knowledge of Latin, and express herself in the classic language of Cornelia, the mother of the Gracchi. And, after all, how will it be possible to prevent some barbarous Gaul from finding his way into the city, and causing the language to degenerate, until it become as corrupt as that of the Diet of Hungary. But other objections are urged against this project; for when a project is set on foot, objections are never wanting.

\* It was mentioned in the Literary Gazette some time ago.—Ed.

It is alleged, that the language of Livy, Tacitus, and Horace, was suited to the manners, customs, and opinions of their country; and that it is not easy to conceive how the Latin language of the golden age can be adapted to express ideas in an age, which cannot be termed either golden or silver, except by a fortunate few. The human mind must be restored to the point at which it was in the reign of Augustus, and we must possess neither more nor fewer ideas than the contemporaries of Mæcenas: now this is impossible, for the human mind is continually advancing to perfection by the experience of succeeding ages. But those who start this objection know not what they say. There is a party here exerting every possible effort to make the present generation retrograde to the notions of the 15th century, and prohibiting as contraband every opinion that rises up at the present day; and as some of these worthies confidently hope to bring France back to the mode of thinking which prevailed in the time of Francis I. may not the society of professors hope to limit the citizens of the town they are about to found to the ideas of the Augustan age? The building of the city has not, I believe, yet commenced. Whenever I learn that the foundation stone of the capitol is laid, I shall not fail to inform you of the event.

I have before me the prospectus of another new establishment, to be called the *Prytæneum*, to which one of the public gardens of Paris is to be appropriated. I cannot tell you how much meaning is conveyed in the learned name *Prytæneum*. The person who is at the head of the establishment announces—"that a complete course of civil and medical gymnastics will be observed; that singing, dancing, fencing, riding, and swimming will be taught; that lessons will be given on eloquence and political economy; that literary sittings will take place, and that festivals will be celebrated in imitation of the ceremonies, customs, and mythologies of different nations; so that, says the director, the *Prytæneum*, will include a Gymnasium, a Lyceum, a promenade, a spectacle for summer entertainment." This will indeed be an establishment on the Greek model; and though we shall not perhaps boast of Plato's glorious days of the *Academy* may be again revived. But the plan is, I fear, too good to be carried into effect; and it is probable that the visitors may walk beneath the shade of the plane trees till they are weary, without the felicity of hearing a discussion among the disciples of Socrates. About twelve years ago, M. Jauffret, who is well known for his agreeable works on education, and who was an enthusiast for the revival of ancient customs, endeavoured in vain to restore *Académie Promenades*. He set to work, it is true, in rather a singular way. The lovers of philosophic conversations inscribed their names on his list, each paying the sum of twelve francs; and having collected a sufficient number, he thrust them into *finer*, and drove them to his country residence. There he read them a long discourse, and gave

them a light breakfast. They then botanized for a short time, and the Professor drew from his pocket another discourse as long as the first, which was followed by a repast worthy of the Pythagoreans. The audience again botanized, and returned to town in the evening, highly edified by the Professor's discourses, and well disposed to make a hearty supper at home. This school, which never produced any philosophers, has long since fallen into oblivion.

#### LETTERS FROM PARIS.—No. II.

Paris, Oct. 7th 1820

Travellers who visit France, proceed almost invariably by the post-roads, which are unquestionably to be preferred for the sake of convenience and expedition. But those who wish to observe the manner and customs of the inhabitants of the provinces, and who do not fear encountering a little fatigue, would do well to deviate from the usual course, and visit those districts where the sight of a foreigner is a sort of phenomenon, and where intercourse with great cities is extremely rare. Such is the department of the Upper Alps, respecting which a very interesting publication has recently been produced, by M. de la Dauvette, late prefect of that department. In addition to much valuable information on the subjects of antiquity and natural history, the work contains the following curious particulars, relative to the mountaineers of the Upper Alps, who seem to bear a marked resemblance to those of Savoy and Piedmont.

"The inhabitants of the Upper Alps sow their grain in the months of June or July; but they do not reap until September in the following year; and when the plains happen to be overwhelmed by avalanches, their harvest does not come on until two years after the period of sowing. It will easily be guessed, that the peasantry are not over rich in a country where the harvest occurs only once in a couple of years. But though not wealthy, the farmer of the Upper Alps, lives like a lord in his own house, and the heaviest portion of agricultural labour devolves on his wife. It is no uncommon thing to see a woman yoked to the plough along with an ass, while the husband holds the ploughshare. A farmer of the Upper Alps accounts it an act of politeness to lend his wife to a neighbour who is oppressed with labour; and the neighbour in his turn, lends his wife for a few days work, whenever the favour is requested. Among these mountains an shode may be procured at the rent of 10 francs per annum; the proprietor, it is true, seldom lays out any money in building, for the habitations consist chiefly of cavities dug in the hills and fitted up with rough planks of wood. Owing to the uncertainty of the harvest, the inhabitants adopt the precaution of always making a sufficient quantity of bread to last for 15 or 18 months. Their bread is a kind of hard biscuit; and it is asserted, that one pound contains as much nutriment as four pounds of ordinary bread. They sop it in milk along with potatoes, and it forms their chief article of food, at least

during a great portion of the year. There is a part of the Upper Alps, called Lagrave, where the cold is so severe during the winter, that it is found impossible to dig the graves in the church-yards. The inhabitants have an odd method of disposing of their dead during that season of the year. They hang them up in the barns, or lay them on the roofs of the houses, until the return of spring. The singular customs of the natives of this mountainous region, might in some instances afford a lesson to people more refined. They do not consider it necessary to ratify their engagements by writing, or any other formality. A squeeze of the hand, or a lock of hair given as a pledge, renders the promise sacred and inviolable. In the arrondissement of Euhruin, when a man falls ill, and being without children, is unable to gather in his harvest, the mayor and curate make known his situation to the parishioners, and men women and children go into the fields and cut down his corn.

About 4000 of these mountaineers are annually compelled by poverty to wander to other parts of the country to gain a livelihood. These emigrants follow various trades and occupations. They become porters, labourers, shepherds, and what is still more strange, teachers. The latter go about with a pen fastened in their hats, and instruct children and even grown persons, during the season when there is little work without doors; and they return home to enjoy the produce of their industry and talent.

Notwithstanding the patriarchal manners of the inhabitants of the Upper Alps, domestic quarrels are perhaps more frequent there than elsewhere; and husbands are often punished for beating their wives, and *vice versa*. In some communes, when a husband suffers himself to be chastised by his wife, he is placed on an ass with his face to the tail of the animal, and in this ludicrous position he rides about, while one of his neighbours proclaims with a loud voice the disgrace of the foolish husband. Sometimes the woman who has had the presumption to beat her husband, is paraded in a similar way; she is compelled to drink frequently, and her mouth is wiped with the tail of the ass. This custom is observed in many parts of France. Formerly, the fear inspired by this public punishment was so great, that the criminals have been known to petition the favour of the Sovereign to get it commuted. At Dijon, both husband and wife were mounted on an ass, and the ceremony of punishment for all the offences of the above nature that had been committed throughout the year, usually took place in the month of May. A decree of parliament was necessary to abolish the custom, which was held in high veneration by the people, and which, in former times, served as a check both on tyrannical husbands, and wives who were too ready in the use of their hands."

But these old customs are gradually wearing away; for the frequent conscriptions that have been set on foot since the revolution, by promoting intercourse between the inhabitants of all parts of France, have in a great measure destroyed the prejudices of these mountaineers.

[Our correspondent goes on to state, that the increased demand for the writings of Voltaire and Rousseau, also tends to this result: but these remarks, our inserting two letters in one Number, induces us to omit. He also predicts—]

"In France a revolution is preparing in religious opinions, similar to that which has already taken place in politics;" and as a proof of public opinion beards, "The government experienced considerable difficulty in collecting twelve censors for the press; for few literary men would disgrace themselves by accepting such an office. A physician, named Pariset, was engaged by the ministry; but his friends overwhelmed him with such bitter reproach, that he at length gave in his resignation. The committee of censorship is a curious combination of abbés, poets, &c. A brother-in-law of the Duke de Richelieu has become a member of it. He is a M. Rothe de Nugent, and his literary knowledge is said to be merely confined to dictionaries, of which his library is exclusively composed.

A pamphlet has just been published in Paris, entitled the *Panorama*, in which the twelve censors are introduced in a witty little comedy, at which every body has laughed except the twelve actors, who preserve their gravity as well as they are able.

## THE DRAMA.

**DRURY-LANE.**—On Tuesday, the improbable comedy of *Town and Country* was performed here; the part of Reuben (Glenroy) by the new actor Mr. Cooper. It was upon the whole so very level an effort, that it affords us nothing to say; except that it was inferior to his *Romeo*. Miss Smithson, after two years retirement, resumed her station on the boards, and looked a plump and handsome Rosalie Somers; and a Mrs. Dobbs played Mrs. Trot (being her first appearance), with abilities equal to the important undertaking.

It is strange how matters of consequence, to some at least, slip the memory of those who are not interested. We had forgotten that a new Polly appeared in the *Beggars' Opera* on Saturday, and was superseded by Miss Povey on Monday.

On Wednesday Mr. Cooper played *Othello* in a manner superior to any of his preceding performances. His conception of the character was good, and his execution not over-strained, but judicious and chaste. His bad scenes were those in which Iago works upon the jealousy of his temperment; his least successful, of those which are susceptible of effect, the soliloquies (generally), and the close of the tragedy. Taken altogether, his *Othello* has certainly raised him in the dramatic standard, and displayed higher powers than either his *Romeo* or *Reuben*. Mr. Booth was the Iago, and acquitted himself, we speak it to his praise, most villainously. The notion that this actor is a mere imitator of Keen is, we think, permitted to detract from the histrionic merits which he really possesses. The gentle Desdemona had a representative in

Miss Chester, who gave a sweet image of the unhappy lady. Mrs. Glover enacted Emilia in her usual style; and marked the passages, which at present evoke popular shouts, with one emphasis: they were caught and loudly applauded.

**COVENT GARDEN.**—*Twelfth Night*—Shakspeare's comedy was on Wednesday produced at this theatre, as the *Comedy of Errors* was last year, with an operatic introduction of songs, glees, &c., from other plays and poems of the same immortal author. In the abstract, we cannot approve of this fashion; but the play of Wednesday was so gorgeous and fascinating an exception to the right rule, that we are compelled to pronounce (were it compounded by any other means) an opinion of the most favourable kind upon its attractions. We certainly never saw any thing upon the stage more rich and brilliant, nor ever heard any thing much more harmonious. We have been so entirely accustomed to have the concord of sweet sounds grafted on innuities of contrivance and dialogue, that it seems a breach of established usage to find delightful music combined with admirable comic action. To alternate from Miss Tree to Farren, in *Viola* to *Malvolio*, and in other characters from *Dumstet*, *Pyne*, *Taylor*, and *Timney*, to *Fawcett*, *Liston*, *Emery*, and *Abbott*, is so superior and so distinctly a double enjoyment, that we feel as if we were being entertained too much; or as if we were attending to two plays instead of one; or as if we were at two theatres on the same evening. The best proof, perhaps, that this treat did not satiate, is that though *Twelfth Night* lasted three hours and a half, the attention of the audience never flagged; but the sense of a very crowded house seemed to be charmed to the final drop of the curtain. Where there are so many particulars both in singing and acting to notice, it is inconvenient for us (in this Number) to enter upon details; and we must be guilty of much omission in our brief summary. The music is principally selected by Bishop, from Morley, Ford, Ravenscroft, Saville, Winter and Sterneron. It consists of seven songs, two duets, five glees, overture, and choruses. Some of them are exquisite: one or two might be omitted as falling in where they retard the story of *Malvolio's* mischances. The scenery is altogether splendid, and the *Masque of Juno and Ceres* adapted from the *Tempest*, and introduced in the fourth act applying to *Orsino* and *Olivia*, is beyond description superb. Pugh, Hodgkins, and the *Griefs*, have carried this art to the utmost bounds of excellence. The dress and decorations are in keeping with the scenery. With regard to the acting, it was of a more mixed nature; and though the parts were strongly cast, they did not fulfil our anticipation. *Farren's* *Malvolio* was admirable, and we lost no point, except in the dungeon scene, which was, we thought, slurred over. *Emery's* *Sir Toby* wanted jollity—it was of too formal and severe a cut. *Liston*, after the first scene, seemed to be at a loss what to do with *Sir Andrew*; yet he made us laugh at the duel, and several other parts. *Faw-*

ett's Clown has no fault; but it was not so easy as his clowning it with Aubrey. Miss Tree charmed every one as Casario; she performed well, and sung enchantingly, both in her solos and in her second to Olivia. Her melody is delicious. Miss Green, as Olivia, did not give so much satisfaction: her acting was forced, and nearly all her musical exertions in too high a key. To unsentimental ears, we might say, her tones were loud and flat. Though not of the best, however, her performances were of a very respectable order. Mrs. Gibbs made Maria as piquante as could be; and in conclusion, the comedy was given out for repetition with unanimous approbation.

A new tragedy, entitled *Wallace*, is among the announcements of Covent Garden Theatre. It is, we believe, from the pen of a young gentleman now only nineteen years of age, though the author of the play called *Nigisnar*, which was acted for a few nights about four years ago. His name is Walker, and he is the son of Mr. Peter Walker, who has appeared so often on the political stage, about Westminster.

### VARIETIES.

*Stockholm, 3d Oct.*—It has lately become quite the fashion in Sweden to dig in the ground in search of relics of antiquity, and as it appears, not wholly without success. A farmer lately found near Westerna a large spiral-formed instrument or utensil of gold, neither the use nor the age of which has yet been ascertained. The bailiff of Halland has just reported that a peasant near Halmstad has dug up a very large quantity of silver coins, weighing nearly 500 ounces, and that none of these coins are less than 500 years old. He has sent about 20 of them as specimens, which the government immediately gave to the Academy of Inscriptions, for examination.

*Timbuctoo*.—One of the Paris journals announced the arrival of a young French traveller, M. Mollien, at Timbuctoo, on the same day on which, unluckily for the credit of the story, a letter from that gentleman, dated "Paris," appeared in the *Moniteur*.

M. Compe, the celebrated French conjuror, is exhibiting in Paris two musical prodigies, who, with their hands muffled, perform concertos on the violin in a style of brilliant execution, seldom displayed by performers who enjoy the free use of their fingers.

The newspapers mention that a mechanic of Malmesbury has invented a method, by which he weaves cloth of so close a fabric as to resist the penetration of wet, like skin.

This is certainly the *golden age* of literature. A French author lately sold to a bookseller, for the sum of 500 francs, the manuscript of a comedy which had never been represented. But alas! the result did not realize the expectations either of author or bookseller, and the piece was decidedly undermanned on the first night of performance. y mutual agreement the bargain was an-

nulled, with the forfeit of 170 francs on the part of the bookseller. We believe there are many dramatic writers who would gladly consent to have their productions biased from the stage on such terms.

M. Bernardin de Saint-Pierre, the son of the well known French novelist of that name, has just returned to France after a voyage to the Indian Ocean, where he visited the islands which have been celebrated in the charming works of his father.

During a storm which happened in January last, an island near Java, called Fisherman's Island, was *rent asunder*!

A Paris paper contains the following paragraph, and very confidently vouches for its authenticity:

"Madame Catalani is engaged for three months at Drury-Lane Theatre, in London. This is truly a matter of surprise, for Drury-Lane is merely a secondary theatre, at which a wretched musical company has hitherto been engaged. All the best English singers, such as Miss Stephens and Braham, belong to Covent-Garden. We are at a loss to imagine what Madame Catalani will do at Drury-Lane. She cannot hope to get up an opera there, and consequently she must confine herself to singing a few songs, interspersed through an English comedy or pantomime, for pantomimes are frequently produced at that theatre. Certainly this is beneath the dignity of so distinguished a singer. We shall not fail to acquaint our readers with the result of this singular engagement!"

#### THE KING OF PRUSSIA AND THE MAGICIAN.

Extract from a letter written in 1760, by a chaplain in the Austrian army, to the prior of the Franciscan convent at Frankfort on the Maine.—"Reverend Sir! You were certainly much astonished when you heard of the two battles, (of Liegnitz and Torgau,) which the King of Prussia has gained in this campaign. At Liegnitz, the King met with a magician, who persuaded him to promise the devil the souls of 20 Jesuits if he would help him. By the aid of the magician, the King accordingly gained the victory. Beelzebub sent from hell many legions of little devils provided with bellows, and placed them behind the soldiers, whom they drove forward. Some who were blown on so furiously that they got the colic, declared that this forced march was a devilish manoeuvre. The imperial army was compelled to retire, being unable to endure the stench of the brimstone which came from the Prussians. At Torgau, where the victory was gained at night-fall, this evil spirit commanded all the little devils that had pushed the Prussians behind, to place themselves on their noses and to take the form of spectacles. By these means, the impious heretics gained the advantage over the unfortunate Austrians, who could not see any thing."

Collections of natural history have been received for the East India Company's Museum in London, both from Sumatra and Java.

M. Bigio, of Venice, has succeeded in extracting from coffee a green gum lac, said to be useful and beautiful in painting.

### LITERARY NOTICES.

LITERARY CHIT-CHAT.—We have elsewhere mentioned that Captain Parry's voyage may be expected to be published in about a month. Mr. Murray has not, that we have seen, announced his other works for the season; but report speaks highly of several which he has in the press. Among those mentioned to us in the literary circles, besides Belzoni, are Walpole's History of his Own Times, and the Anecdotes of the late King, by the Earl of Waldegrave, both of which naturally excite great expectation. Mr. Colburn has advertised Lady Morgan's Italy, from which a good deal of entertainment is anticipated. The correspondence of Charles Talbot, Duke of Shrewsbury, edited by Archdeacon Cox, is also announced. Mr. Maturin has, we hear, got sermons, novels, and plays, all forth or forth-coming. Two or three satirical novels are about to appear. The author of the successful novel of the Mystery is again ready. Mr. Godwin has taken up the cudgels against Mr. Malthus. The Edinburgh press is very still at present: we have heard of nothing but Kenilworth.

### METEOROLOGICAL JOURNAL.

NOVEMBER 1820.

*Thursday, 2*—Thermometer from 30 to 49. Barometer from 29.86 to 29.96. Wind S. W. 1. and  $\frac{1}{2}$ .—Generally clear. Rain fallen, 0.25 of an inch.  
*Friday, 3*—Thermometer from 23 to 45. Barometer from 30.00 to 30.06. Wind S. W. and S. E.  $\frac{1}{2}$ .—Generally foggy; at times clear. Ice this morning, almost  $\frac{1}{2}$  of an inch thick.  
*Saturday, 4*—Thermometer from 24 to 48. Barometer from 30.05 to 30.09. Wind E. b. S.  $\frac{1}{2}$ .—Morning cloudy; the rest of the day generally clear.  
*Sunday, 5*—Thermometer from 23 to 48. Barometer from 30.10 to 29.91. Wind E. 0. and S. b. E. 1.—A thick rime and fog, till 2 in the afternoon, when it gradually went off, and became cloudy. Heavy rain in the evening.  
*Monday, 6*—Thermometer from 48 to 54. Barometer from 29.90 to 29.95. Wind S. W. and W.  $\frac{1}{2}$ .—Generally cloudy. Rain fallen, .25 of an inch.  
*Tuesday, 7*—Thermometer from 43 to 58. Barometer from 29.94 to 29.97. Wind S.  $\frac{1}{2}$ .—Cloudy and hazy.  
*Wednesday, 8*—Thermometer from 50 to 56. Barometer from 30.00 to 30.03. Wind E.  $\frac{1}{2}$  and 1.—Generally cloudy. A little rain in the morning.  
On Tuesday the 14th, at 53 minutes, 56 seconds after 6 o'clock, the 3rd Satellite of Jupiter will immerse into his shadow, and will emerge at 55 minutes, 34 seconds after 9. Edmonton, Middlesex. JOHN ADAMS.

### TO CORRESPONDENTS.

Philo Nauticus and I will find letters at our office. Errata.—In our last No. p. 718, col. 2, l. 18, for at, read et; l. 2 from bottom, for *advised*, r. *advised*; p. 718, col. 1, l. 29, for *too*, r. *so*.

## BOOKS PUBLISHED THIS DAY.

Price 1s. 6d.

**A REPLY to an "UN-SENTIMENTAL SORT of a CRITIC, the Reviewer of "Spencer's Anecdotes," in the Quarterly Review for October 1859; otherwise to the Longinus of "In-degree Nature, by ONE of the FAMILY of the BOWLES.**

"Come, let us nap this bug."—Pope.

"If 'Nature' as the Reviewer asserts, be a term, which the 'Family of the Bowles' have been too long claiming, 'the noble-eyed Family' of the 'Crusial Judge' have been as long shutting their eyes to that which is as clear as the 'Sun at noon-day.'—*Reply.*

Sold by Longman, Hurst, Rees, Orme, and Brown, and Baldwin, Cradock, and Joy, Paternoster Row; Colburn and Co. Conduit Street; and J. Warren, Old Road Street. Where may be had.

THE INFARTABLE PRINCIPLES OF POETRY, in Answer to Thomas Campbell, Esq. on the Poetical Character of Pope. By the Rev. W. L. Bowles, price 2s. 6d.

*Bingley's Animal Biography, with Plates.* In 4 vols. 12mo. the 8th edition, with considerable Additions, and 25 Engravings, comprising 129 Figures. Price 11. 8s. boards.

**ANIMAL BIOGRAPHY, or Popular Zoology:** illustrated by authentic Anecdotes of the Economy, Habits of Life, Instincts, and Sagacity of the Animal Creation, including Quadrupeds, Birds, Reptiles, Serpents, Fishes, Insects, and Worms, arranged according to the System of Linnæus. By the Rev. W. BINGLEY, A. M. Fellow of the Linnean Society, &c. &c.

"The labour of nearly two years, and the careful inspection of almost one thousand volumes, are solid proofs of the compiler's diligence and perseverance. From the perusal of these Anecdotes the young of both sexes may reap much entertainment and instruction, without encountering a single passage which can offend the modesty or wound their feelings which constitute the ornament and reinforcement of our condition."

Printed for F. C. and J. Rivington; Longman, Hurst, Rees, Orme, and Brown; Cadell and Davies; Jeffery and Son; Lackington and Co.; Harvey and Darton; J. Mawman; J. B. Bookers; R. Scholey; Baldwin, Cradock, and Joy; Sherwood, Neely, and Jones; G. and W. B. Whittaker; Ogle, Denton, and Co.; Edwards and Co.; and Simpkin and Marshall.

*Buskop Horne on the Psalm.*

In two vols. 8vo. price 16s. boards, the eleventh edition of

**A COMMENTARY on the BOOK of PSALMS;** in which their literal or historical sense, as they relate to King David and the People of Israel, is illustrated; and their application to Messiah, to the Church, and to Individuals as Members thereof, is pointed out; with a view to render the use of the Psalter pleasing and profitable to all orders and degrees of Christians. By GEORGE, Lord Bishop of NORWICH, and President of Magdalen College, Oxford. London. Printed for F. C. and J. Rivington; Longman and Co.; J. Nunn; Lackington and Co.; Cadell and Davies; J. Cuthell; J. Richardson; J. M. Richardson; G. and W. B. Whittaker; J. Hatchard and Son; Baldwin and Co.; J. Booth; J. Robinson; T. Hamilton; Simpkin and Co.; T. and J. Allman; T. Tegg; R. Saunders; R. Scholey; and Hurst, Robinson, and Co. Of whom may be had.

Buskop Horne's Discourses, in 3 vols. 8vo. price 11. 4s. bds. - - - Works, 4 vols. 8vo. price 17. 16s. bds. - - - - - 6 vols. (including the Psalms) price 21. 12s. boards.

In 12mo. 11. 4s.; 12s. 11. 6s.; proofs on India paper, Imperial 4to. 21. 12s. 6d.; ditto before the letters Colombar 4to. 31. 3s.

**ILLUSTRATIONS of the NOVELS and TALES of the "Author of Waterley,"** in 12 Prints with Vignette Title. Engraved by Heath, Warren, Engleheart, Romney, M. L. L. L. &c. Original Devoted by William Allan. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

In 8vo. price 11s. bds. the 2d. edit. of

**THE EXCURSION. A Poem.** By WILLIAM WORDSWORTH Esq. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had.

Mr. Wordsworth's other Poetical Works, complete, including "Tropical Bullets," the "River Deddion," the "Hate Day of Elysium," and the Writings of the Author's other published Poems. In four Volumes, fols. cap 8vo. price 11. 12s.

Preparing for the Press, by the Rev. Archdeacon Coke.

**THE PRIVATE and CONFIDENTIAL CORRESPONDENCE of CHARLES TALBOT, Duke of Shrewsbury, Principal Minister to King William,** for a considerable period of his Reign.

This collection comprises his Epistolary Interference in the King, as well as with Lords Somers, Sunderland, Oxford, Halifax, and other distinguished Characters of the Times; and is elucidated with Historical and Biographical Notices. With a Portrait of the Duke of Shrewsbury, from an original Painting, by Sir Peter Leely.

Those gentlemen who are desirous of Large Paper Copies to correspond with the large Copies of the author's other Works, are requested to send their names to the Publishers before the 20th instant, as the Work will then be sent to press.

Printed for Longman, Hurst, Rees, Orme, and Brown, London.

*Mrs. Grant's Tales.*

**TALES founded on FACTS.** By Mrs. GRANT, of Croydon, author of Sketches of Life and Manners, &c. 12mo. price 7s. boards. Printed for Boney and Stone, Broad Street, Exchange.

"These four Tales are naturally and pleasingly written; and what we might find to censure is amply compensated by the sound moral tone of the whole, which recommends the book as exceedingly proper for youthful readers."—*Literary Gazette*, Oct. 1844.

In 4 vols. 12mo. price 11s. 6s.

**MELMOTH the WANDERER, a Tale.** By the author of "Bertram, a Tragedy." Painted for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London. Of whom may be had, by the same author.

1. WOMEN; or, Four at Centre. A Tale. 3 vols. 12mo. Price 11. 1s. boards.

2. FREDDO, a Tragedy, in five acts. 4s. sewed.

3. SERMONS. By the Rev. C. R. Martin, Curate of St. Peter's, Dublin. 1 volume 8vo. 12s. boards.

*C. Bell's Operations of Surgery.*

Part 1. of

**ILLUSTRATIONS of the Great OPERATIONS of SURGERY,** Trephine, Hernia, Amputation, Anæsthesia, and Lithotomy. By CHARLES BELL.

The Work will consist of Five Parts in large 4to. each part containing four plates, with letter-press, price 11s. plain, or 21s. coloured impressions. The First Part contains Illustrations of the Operation of the Trephine.

Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author.

**ANATOMY of the HUMAN BODY.** 3 vols. 21. 12s. 6d.

**SYSTEM of OPERATIVE SURGERY.** 2 vols. 11. 12s.

**SURGICAL OBSERVATIONS.** Parts 1 to 5. 6s. each.

**THE ANATOMY of the BRAIN.** 4to. 21. 2s.

**ENGRAVINGS of the NERVES.** 4to. 11. 1s.

**ARTERIES.** 11. 8vo. plain, 11s. col. 11. 1s.

**DISSERTATION on GUN-SHOT WOUNDS.** 8vo. 10s. 6d.

In post 8vo. price 12s. boards, the second edition of **LETTERS, written for the POST, and not for the PRESS.** Printed for Longman, Hurst, Rees, Orme, and Brown, London.

In 8vo. price 7s. 6d. in boards.

**A NARRATIVE of PROCEEDINGS in VENEZUELA, in South America in 1819 & 1820,** with the Character of the Republica Government; a Description of Caracas; the Force of General Morillo; the State of the Royalists, &c. By GEORGE LAVAL CHENESTON, late Captain and Judge Advocate of the British Legation, raised to the Service of the Republic of Venezuela. Printed for John and Arthur Archibald, Cornhill. 1820.

Medical Works, recently published by Longman, Hurst, Rees, Orme and Brown, Paternoster Row.

1. **ILLUSTRATIONS of the Capital OPERATIONS of SURGERY,** Trephine, Hernia, Amputation, Anæsthesia, and Lithotomy. By Charles Bell. Part 1. In large 4to. Price 11s. plain, or 21s. coloured plates. To be completed in Five Monthly Parts. By the same author.

**SURGICAL OBSERVATIONS;** being a Quarterly Report of Cases in Surgery. The first 5 Parts are already published, with Plates. Price 6s. each.

**THE ANATOMY of the BRAIN,** explained in a Series of Engravings, beautifully coloured, with a Dissertation on the Communication between the Ventricles of the Brain. In royal 4to. 21. 2s. boards.

**A SYSTEM of OPERATIVE SURGERY,** founded on the Basis of Anatomy. 2 vols. 8vo. 11. 12s. bds. The 2d. edition, with upwards of 100 plates.

**A SERIES of ENGRAVINGS,** explaining the Course of the Nerves. New Edit. 11. 1s.

**THE ANATOMY of the HUMAN BODY.** By John and Charles Bell. A new Edit. 3 vols. 8vo. 21. 12s. 6d.

2. **PRACTICAL OBSERVATIONS on the Symptoms, Discrimination, and Treatment of some of the most common Diseases of the Lower Intestines;** to which are added, some Suggestions upon a new and successful Mode of correcting habitual confinement in the bowels, to ensure their regular Action without the aid of Purgatives. By J. Houslip. In 8vo. price 8s. 6d. bds. By the same author.

**PRACTICAL OBSERVATIONS on the DISEASES of the URINARY ORGANS,** particularly those of the Bladder, Prostate Gland, and Urethra. Illustrated by Cases and Engravings. In 8vo. 11s. bds.

**PRACTICAL OBSERVATIONS in SURGERY and MORBID ANATOMY.** With Cases, Dissections, and eight Plates, comprising Illustrations selected from the Contents of Mr. Henshaw's invaluable Museum. In 8vo. 11s.

3. **DELINATIONS of the CUTANEOUS DISEASES,** compiled in the Classification of the late Dr. Willan, including the greater part of the Engravings of that author, in an improved state, and completing the Series as intended to have been finished by him. By T. Bateman, M. D. F. L. S. In one volume, 4to. with upwards of 70 coloured plates. Price 12d. 12s. bds.

The Series of New Engravings, representing those Diseases which should have been figured in the subsequent Parts of Dr. Willan's unfinished Works, may be had by the purchasers of that Work, separate. Price 7d. bds. By the same author.

**REPORTS on the DISEASES of LONDON,** and the State of the Weather, from 1804 to 1816, including Practical Remarks on the Causes and Treatment of the former; and preceded by a Historical View of the State of Health and Disease in the Metropolis. In 8vo. 8s.

4. **A SUCINCT ACCOUNT of the CONTAGIOUS FEVER of this Country,** as exemplified in the Epidemic now prevailing in London, with the appropriate Method of Treatment, as practised in the House of Recovery, and pointing out the Means of Prevention. 2d Edit. 8vo. 6s. 6d. bds.

5. **A PRACTICAL SYNOPSIS of CUTANEOUS DISEASES,** according to the Arrangement of Dr. Willan, exhibiting a concise View of the Diagnostic Symptoms, and the Method of Treatment. In 8vo. (illustrated by a coloured Plate of the Eight Orders). 4th Edit. 12s. bds.

London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane; Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 16, (Formerly Change Strand, where Communications, post paid, are requested to be addressed to the Editor.

PRICE 3d.

## REVIEW OF NEW BOOKS.

*Melmoth the Wanderer; a Tale.* By the Author of *Bertram*. Edinburgh. 12mo. 4 vols. 1820.

*Cui bono? Cui bono? Cui bono?* good Mr. Maturin! You regret, in your preface, that necessity compels you to appear before the public in the unseemly character of a writer of Romances: but surely there are many romances of tenor and tendency which it would not be unbecoming in any clergyman to write,.... compositions in which the powers of invention are called in to promote the interests of morality, and the aid of fiction is only employed to serve the cause of truth. True it is, however, had such are neither the ways nor means, the objects nor ends, of the *Diabliana* in which you delight to revel; and never did you revel more errantly from every good purpose than in *Melmoth, or the Wanderer*. Yet "the tint of this tale (says the author) was taken from a passage in one of my Sermons," and is intended to show, that there is no human price at which a man will sell the salvation of his immortal soul. We have heard of the *seria mista scis*, and have often been pleased with that style; but we know of no case in which the *sancta mista profanis* has been given, nor can we surmise a case in which it could give satisfaction. And, after he consulted his understanding, Mr. Maturin must be too sensible a man to believe that his proposition needed the illustration of a tissue of impossibilities; make it out, even were it advisable to speculate through four volumes on so absurd, while at the same time so sacred a question. Limited to probability, a fine novel might have been constructed on similar grounds. "Reason, a rogue, reason!" cries Sir John Ulstaff to Pistol; "Think'st thou I'll danger my soul gratis?" The extent to which the dearest stake of mankind is exposed, not in consequence of rect offers from Satan in person, but directly, through his temptations to be and crime, we could have supposed to be a fitting and useful theme for Clergyman to employ his pen upon, VOL. IV.

if obliged to write novels; but we can form no conception of any justifiable motive to induce him to adopt a fable destitute of instruction, unnatural, and absolutely stinking of the infernal sulphur throughout. His prayers might have taught him to solicit being kept from the Devil, and not to figure the Evil Spirit stirring and at home in all the familiar transactions of life. In short, he might and ought to have avoided the monstrous framework in which he has exhibited this picture, or rather series of pictures, more disgusting and hideous than the poetical demonology of the noble lord, from whom he has borrowed his morbidity, his horrors, his atrocities, and his hellishness, out-Byroning Byron in these unamiable, inhuman, worse than useless, and abominable qualities.

With these general opinions of Mr. Maturin's new romance, it can hardly be imagined that we looked with much complacency to the details and execution. Yet we must say that *Melmoth* possesses a sort of wild interest, which displays great though perverted talent in the writer.

Melmoth is a being who has lived a century and a half owing to a compact with the foul fiend. His descendants reside in Ireland, and a visit which he pays to an old miser, the mortal representative of the family, frightens him to death, and transfers the property to a young student his nephew. Among his uncle's papers he reads the story of one Stanton, who had had numerous struggles with the Devil-possessed Melmoth; and immediately after a Spaniard, one Mongada, who had been similarly exposed, is wrecked on the coast, and becomes an inmate with the young gentleman, to whom he relates his adventures. These consist in his being made a monk, escaping, getting into and out of the Inquisition, and finally taking refuge in the house of a Jew-doctor, who tells him the story of sundry skeletons in his study. This introduces an Indian tale,\* which is hardly finished when the Devil-man, Melmoth senior, arrives at his paternal abode (not hell, nor even St. Patrick's Purgatory, but the Wicklow Lodge of the Melmoths) and prepares for his trans-

formation, or death, we cannot tell which. An account of this event is given, and the fourth volume concludes.

Only further prefacing, that as a composition Melmoth presents many inelegancies, and even grammatical errors; that there is often apparent a facetious vein, not bad *per se*, but very anomalously linked to the matter; and that there is a prevailing tediousness in defining sensations, sentiments, and all sorts of feelings; we shall pursue our customary course in selecting a few passages, most readily separable from a work which it is not our intention to follow minutely, to enable our readers to exercise their own judgment on the pretensions of the author.

Talking of ancient superstitions, we find the relation (as we think) spoilt by the use of fashionable phraseology: the person described is a Wicklow Sybil.

"No one knew so well as she to find where the four streams met, in which, on the same portentous season, the *chemise* was to be immersed, and then displayed before the fire, (in the name of one whom we dare not mention to 'ears polite'), to be turned by the figure of the destined husband before morning. No one but herself (she said) knew the hand in which the comb was to be held, while the other was employed in conveying the apple to the mouth,—while, during the joint operation, the shadow of the phantom-spouse was to pass across the mirror before which it was performed. No one was more skilful or active in removing every iron implement from the kitchen where these ceremonies were usually performed by the credulous and terrified dupes of her wizardry, lest, instead of the form of a comely youth exhibiting a ring on his white finger, an headless figure should stalk to the rack, (*Anglicè*, dresser), take down a long spit, or, in default of that, snatch a poker from the fire-side, and mercilessly take measure with its iron length of the sleeper for a coffin. No one, in short, knew better how to torment or terrify her victims into a belief of that power which may and has reduced the strongest minds to the level of the weakest; and under the influence of which the cultivated sceptic, Lord Lyttelton, yelled and gnashed and writhed in his last hours, like the poor girl who, in the belief of the horrible visitation of the vampire, shrieked aloud, that her grandfather was sucking her vital blood while she slept, and expired under the influence of imaginary horror. Such was the being to whom old Melmoth had committed his life, half from credulity, and (*Hibernicè* speaking) more than half from avarice."

Our modern writers have got into an odd way of imitating the stuff of each other about their hero's eyes; Mr. Maturin's has

\* It is the best part of the book; written in pretty language, but, like the rest, altogether improbable in its conception. The education of the heroine never could have taken place in her hole at the mouth of the Hoogly.

got squinters as super-natural and odd, as any Vampire's among them.

"John's eyes were in a moment, and as if by magic, riveted on a portrait that hung on the wall, and appeared, even to his untutored eye, far superior to the tribe of family pictures that used to moulder on the walls of a family mansion. It represented a man of middle age. There was nothing remarkable in the costume, or in the countenance, but the eyes, John felt, were such as one feels they wish they had never seen, and feels they can never forget. Had he been acquainted with the poetry of Southey, he might have often exclaimed in his after-life, 'Only the eyes had life,

They gleamed with demon light.'—*THALARA.*

"From an impulse equally resistless and painful, he approached the portrait, held the candle towards it, and could distinguish the words on the border of the painting,—*Jno. Melmoth, anno 1646.*"

N. B. This was in 1816, and the portrait was that of the human-satan still alive and ill-doing. The following is a sample of genuine mediocrity, in the original romance-writing manner. John has got Stanton's memoirs to peruse:

"He sunk for a few moments into a fit of gloomy abstraction, till the sound of the clock striking twelve made him start,—it was the only sound he had heard for some hours, and the sounds produced by inanimate things, while all living beings around are as dead, have at such an hour an effect indescribably awful. John looked at his manuscript with some reluctance, opened it, paused over the first lines, and as the wind sighed round the desolate apartment, and the rain pattered with a mournful sound against the dismantled window, wished—what did he wish for?—he wished the sound of the wind less dismal, and the dash of the rain less monotonous.—He may be forgiven, it was past midnight, and there was not a human being awake but himself, within ten miles when he began to read."

As a specimen of the disgusting exaggeration of incarnate diabolism in a man who has cut his father's throat, and exults in it, we may quote the following:—A monk and a novice have been discovered to be of different sexes, whom the warmest passion tempted to disguise and profanation: the paradise (relating the catastrophe in a subterranean dungeon of the convent,) says,

"They were conducted here; I had suggested the plan, and the Superior consented to it. He would not be present, but his dumb nod was enough. I was the conductor of their (intended) escape; they believed they were departing with the connivance of the Superior. I led them through those very passages that you and I have trod. I had a map of this subterranean region, but my blood ran cold as I traversed it; and it was not at all inclined to resume its usual temperament, as I felt what was to be the destination of my attendants. Once I turned the lamp, on pretence of trimming it, to catch a glimpse of the devoted wretches. They were embracing each other,—the light of joy trembled in their eyes. They were

whispering to each other hopes of liberation and happiness, and blending my name in the interval they could spare from their prayers for each other. That sight extinguished the last remains of compunction with which my horrible task had inspired me. They dared to be happy in the sight of one who must be for ever miserable,—could there be a greater insult? I resolved to punish it on the spot. This very apartment was near,—I knew it, and the map of their wanderings no longer trembled in my hand. I urged them to enter this recess (the door was then entire) while I went to examine the passage. They entered it, thanking me for my precaution,—they knew not they were never to quit it alive. But what were their lives for the agony their happiness cost me? The moment they were inclosed, and clasping each other (a sight that made me grind my teeth), I closed and locked the door. This movement gave them no immediate uneasiness,—they thought it a friendly precaution. The moment they were secured, I hastened to the Superior, who was on fire at the insult offered to the sanctity of his convent, and still more to the purity of his penetration, on which the worthy Superior piqued himself as much as if it had ever been possible for him to acquire the smallest share of it. He descended with me to the passage,—the monks followed with eyes on fire. In the agitation of their rage, it was with difficulty they could discover the door after I had repeatedly pointed it out to them. The Superior, with his own hands, drove several nails, which the monks eagerly supplied into the door, that effectually joined it to the staple, *never to be disjoined*; and every blow he gave, doubtless he felt as if it was a reminiscence to the accusing angel, to strike out a sin from the catalogue of his accusations. The work was soon done,—the work never to be undone. At the first sound of steps in the passage, and blows on the door, the victims uttered a shriek of terror. They imagined they were detected, and that an incensed party of monks were breaking open the door. These terrors were soon exchanged for others,—and worse,—as they heard the door nailed up, and listened to our departing steps. They uttered another shriek, but O how different was the accent of its despair!—they knew their doom.

It was my penance (no,—my delight) to watch at the door, under the pretence of precluding the possibility of their escape, (of which they knew there was no possibility); but, in reality, not to inflict on me the indignity of being the convent gaoler, but of teaching me that callousity of heart, and induration of nerve, and stubbornness of eye, and apathy of ear, that were best suited to my office. But they might have saved themselves the trouble,—I had then all before ever I entered the convent. Had I been the Superior of the community, I should have undertaken the office of watching the door. You will call this cruelty, I call it curiosity,—that curiosity that brings thousands to witness a tragedy, and makes the most delicate female feast on groans and agonies. I had an advantage over them,—

the groan, the agony I feasted on, were real I took my station at the door—that door which, like that of Dante's hell, might have borne the inscription, "Here is no hope,"—with a face of mock penitence, and genuine—cordial delectation. I could hear every word that transpired. For the first hours they tried to comfort each other,—they suggested to each other hopes of liberation—and as my shadow, crossing the threshold, darkened or restored the light, they said, "That is he?"—then, when this occurred repeatedly, without any effect, they said, "No,—no, it is not he," and swallowed down the sick sob of despair, to hide it from each other. Towards night a monk came to take my place, and to offer me food. I would not have quitted my place for worlds; but I talked to the monk in his own language, and told him I would make a merit with God of my sacrifices, and was resolved to remain there all night, with the permission of the Superior. The monk was glad of having a substitute on such easy terms, and I was glad of the food he left me, for I was hungry now, but I reserved the appetite of my soul for richer luxuries. I heard them talking within. While I was eating, I actually lived on the famine that was devouring them, but of which they did not dare to say a word to each other. They debated, deliberated, and, as misery grows ingenious in its own defence, they at last assured each other that it was impossible the Superior had locked them in there to perish by hunger. At these words I could not help laughing. This laugh reached their ears, and they became silent in a moment. All that night, however, I heard their groans,—those groans of physical suffering, that laugh to scorn all the sentimental sighs that are exhaled from the hearts of the most intoxicated lovers that ever breathed. I heard them all that night. I had read French romances, and all their unimaginable nonsense. Madame Sevigné herself says she would have been tired of her daughter in a long tete-a-tete journey, but clap me to lovers into a dungeon, without food, light, or hope, and I will be damned (that I am already, by the bye) if they do not grow sick of each other within the first twelve hours. The second day hunger and darkness had their usual influence. They shrieked for liberation, and knocked loud and long at their dungeon door. They exclaimed they were ready to submit to any punishment; and the approach of the monks, which they would have dreaded so much the preceding night, they now solicited on their knees. What a jest, after all, are the most awful vicissitudes of human life!—they supplicated now for what they would have sacrificed their souls to avert four-and-twenty hours before. Then the agony of hunger increased, they shrunk from the door, and grovelled apart from each other. *Apert!*—how I watched that. They were rapidly becoming objects of hostility to each other,—oh what a feast to me! They could not disguise from each other the revolting circumstances of their mutual sufferings. It is one thing for lovers to sit down to a feast magnificently spread.

and another for lovers to couch in darkness and famine,—to exchange that appetite which cannot be supported without duties and labors, for that which would barter a desecrated Venus for a morsel of food. The second night they raved and groaned, (as occurred); and, amid their agonies, (I must do justice to women, whom I hate as well as men), the man often accused the female as the cause of all his sufferings, but the woman never,—never reproached him. Her roars might indeed have reproached him bitterly, but she never uttered a word that could have caused him pain. There was a change which I well could mark, however, in their physical feelings. The first day they clung together, and every movement I felt was like that of one person. The next the man alone struggled, and the woman moaned in helplessness. The third night,—how shall I tell it?—but you have bid me go on. All the terrible and loathsome execrations of famine had been undergone; the disunion of every tie of the heart, of passion, of nature, commenced. In the agonies of their maddened sickness they loathed each other,—they could have cursed each other, if they had breath to curse. It was on the fourth night that I heard the shriek of the wretched male,—her lover, in the agony of hunger, had fastened his teeth in her shoulder;—it bosom on which he had so often luxuriated, became a meal to him now."

"Monster! and you laugh?"—"Yes, I laugh at all mankind, and the imposition they put on me to practise when they talk of hearts, high at human passions and human cares, rice and virtue, religion and impiety; they all the result of petty localities, and artificial situation. One physical want, one sense and abrupt lesson from the untutored and veiled lip of necessity, is worth all the tricks of the empty wretches who have pretended to prate it, from Zeno down to Burdettius. Oh! it silences in a second all feeble sophistry of conventional life, and all titious passion. Here were a pair who did not have believed all the world on their side, even though angels had descended to attest the attestation, that it was possible for them to exist without each other. They risked every thing, trampled on every human and divine, to be in each other's arms. One hour of hunger undid them. A trivial and ordinary want, he claims at another time they have resorted to as a vulgar interruption of their spiritual intercourse, not only by its natural action sundred it for ever, but, before it could, converted that intercourse into a scene of torment and hostility inconceivable, among cannibals. The bitterest enemies on earth could not have regarded each other with more abhorrence than these lovers. I had wretches! you boasted of having them. I boast I have none, and which of us is most by the want, let life decide. My story is nearly finished, and so I hope is yours. When I was last here I had some more to excite me;—talking of those things that employment to one who has been a stranger to them. On the sixth day all was

still. The door was unmade, we entered,—they were no more. They lay far from each other, farther than on that voluptuous couch into which their passion had converted the mat of a convent bed. She lay contracted in a heap, a lock of her long hair in her mouth. There was a slight scar on her shoulder,—the rapid despair of famine had produced no farther outrage. He lay extended at his length,—his hand was between his lips; it seemed as if he had not strength to execute the purpose for which he had brought it there. The bodies were brought out for interment. As we removed them into the light, the long hair of the female, falling over a face no longer disguised by the novice's dress, recalled a likeness I thought I could remember. I looked closer, she was my own sister,—my only one,—and I had heard her voice grow fainter and fainter. I had heard—"and his own voice grew fainter,—it ceased."

Of this horrible complexion are Mr. Maturin's scenes: it is with difficulty one can read another page of such abomination. But he luxuriates in them. Only read the particulars of the murder of an obnoxious individual by a mob.

"This tranquillity of resolved vengeance was the most dreadful indication of its never desisting till its purpose was accomplished. The last ring was broken—the last resistor overcome. Amid yells like those of a thousand tigers, the victim was seized and dragged forth, grasping in both hands fragments of the robes of those he had clung to in vain, and holding them up in the impotence of despair."

"The cry was hushed for a moment, as they felt him in their talons, and gazed on him with thirsty eyes. Then it was renewed, and the work of blood began. They dashed him to the earth—tore him up again—flung him into the air—tossed him from hand to hand, as a bull goes the howling mastiff with horns right and left. Bloody, defaced, blackened with earth and battered with stones, he struggled and roared among them, till a loud cry announced the hope of a termination to a scene alike horrible to humanity, and disgraceful to civilization. The military, strongly reinforced, came galloping on, and all the ecclesiastics, with torn habits, and broken crucifixes, following fast in the rear,—all eager in the cause of human nature—all on fire to prevent this base and barbarous disgrace to the name of Christianity and of human nature."

"Alas! this interference only hastened the horrible catastrophe. There was but a shorter space for the multitude to work their furious will. I saw, I felt, but I cannot describe, the last moments of this horrible scene. Dragged from the mud and stones, they dashed a mangled lump of flesh right against the door of the house where I was. With his tongue hanging from his lacerated mouth, like that of a bated bull; with one eye torn from the socket, and dangling on his bloody clunk; with a fracture in every limb, and a wound for every pore, he still howled for "life—life—life—mercy!" till a stone, aimed by some pitying hand, struck him

down. He fell, trodden in one moment into sanguine and discoloured mud by a thousand feet. The cavalry came on, charged with fury. The crowd, saturated with cruelty and blood, gave way in grim silence. But they had not left a jot of his little finger—a hair of his head—a slip of his skin. Had Spain mangled all her reliques from Madrid to Monserrat, from the Pyrenees to Gibraltar, she could not have recovered the paring of a nail to canonize. The officer who headed the troop dashed his horse's hoofs into a bloody formless mass, and demanded "Where was the victim?" He was answered, "Beneath your horse's feet!" and they departed."

But we will defile our pages with no more; our loathing is only increased by the consideration of the author's abilities.

#### *The Percy Anecdotes. Part XII.—Imagination.*

The Anecdotes in this Part are neither so amusing nor so appropriate as in the last which we noticed. It is however consistent with the preceding volumes, and we quote three of its specimens.

*Entrancing.*—Hieronymus Cardanus, of Milan, writes of himself, that he could pass as often as he pleased into such an ecstasy, as only to have a soft hearing of the words of such as spoke to him, but not any understanding of them. Nor at such times was he in the least sensible of any bodily pain; though troubled with the gout he felt none of its twitches or pullings. The beginning of the transition was at first in the head, and thence it spread all down to the back bone. At first he could find a sort of separation from the heart, as if the soul was departing; and this was communicated to the whole body, "as if a door opened." He adds, that he saw all that he desired with his eyes, and that images of whatever he wished to summon before him, woods, mountains, living creatures, &c. appeared distinctly. Cardanus ascribes this extraordinary faculty to an extreme vivacity of imagination; but something more seems required to account for it. He had probably, in his physical organization, some share of the same transition power which has, in later times, been so memorably exemplified in the case of Colonel Townshend, thus related by Dr. Cheyne.

"Colonel Townshend, a gentleman of honour and integrity, had for many years been afflicted with a nephritic complaint. His illness increasing, and his strength decaying, he came from Bristol to Bath in a litter, in autumn, and lay at the Bell Inn. Dr. Baynard and I (Dr. Cheyne) were called to him, and attended him twice a day; but his vomitings continuing still incessant and obstinate against all remedies, we despaired of his recovery. While he was in this condition, he sent for us one morning; we waited on him, with Mr. Skrine, his

"We are acquainted with a remarkable living instance of this phenomenon, in the person of a not undistinguished artist.—Ed.

apothecary. We found his senses clear, and his mind calm; his nurse and several servants were about him. He told us he had sent for us, to give him some account of an odd sensation he had for some time observed and felt in himself; which was, that, composing himself, he could die or expire when he pleased, and yet by an effort, or some how, he could come to life again: which he had sometimes tried before he sent for us. We heard this with surprise; but as it was not to be accounted for from common principles, we could hardly believe the fact as he related it, much less give any account of it; unless he should please to make the experiment before us, which we were unwilling he should do, lest, in his weak condition, he might carry it too far. He continued to talk very distinctly and sensibly, above a quarter of an hour, about this surprising sensation, and insisted so much on our seeing the trial made, that we were at last forced to comply. We all three felt his pulse first; it was distinct, though small and thready; and his heart had its usual beating. He composed himself on his back, and lay in a still posture some time; while I held his right hand, Dr. Baynard laid his hand on his heart, and Mr. Skirne held a clean looking glass to his mouth. I found his pulse sink gradually, till at last I could not feel any, by the most exact and nice touch. Dr. Baynard could not feel the least motion in his heart, nor Mr. Skirne the least soil of breath on the bright mirror he held to his mouth; then each of us, by turns, examined his arm, heart, and breath, but could not, by the nicest scrutiny, discover the least symptom of life in him. We reasoned a long time about this odd appearance as well as we could, and all of us judging it inexplicable and unaccountable, and finding he still continued in that condition, we began to conclude that he had indeed carried the experiment too far, and at last were satisfied he was actually dead, and were just ready to leave him. This continued about half an hour. As we were going away, we observed some motion about the body, and upon examination, found his pulse and the motion of his heart gradually returning; he began to breathe gently, and speak softly; we were all astonished to the last degree at this unexpected change, and after some further conversation with him among ourselves, went away fully satisfied as to all the particulars of this fact, but confounded and puzzled, and not able to form any rational scheme that might account for it."

*Peter the Great.*—Nothing was so much an object of antipathy to Peter the Great, as a black insect of the scarabæe, or beetle kind, which breeds in houses that are not kept clean, and especially in places where meat and other provisions are deposited. In the country, the walls and ceilings of the peasants' houses are covered with them, particularly in Russia, where they abound more than in any other part in the world. They are there called *tarascan*; but our naturalists give them the name of dissecting scarabæe.

Although the Russian monarch was far from being subject to childish fears, or wo-

manish fancies, one of these insects sufficed to drive him out of an apartment, nay, even out of the house. In his frequent journeys in his own dominions, he never went into a house without having the apartments carefully swept by one of his own servants, and being assured that there were no tarascans to fear.

One day he paid a visit to an officer who stood pretty high in his esteem, at his country house, which was built of wood, at a little distance from Moscow. The Czar expressed his satisfaction at what was offered him, and with the order he observed in the house. The company sat down at table, and dinner was already begun, when he asked his landlord, "If there were tarascans in his house?" "Not many," replied the officer, without reflecting; "and the better to get rid of them, I have pinned a living one to the wall." At the same time he pointed to the place where the insect was pinned, and still continued to palpitate. Unfortunately it was just beside the Czar, in whom the unexpected sight of this object of his aversion produced so much emotion, that he rose instantly from table, gave the officer a violent blow, and left his house with all his attendants.

*A Learned Discovery.*—Among the discoveries of the learned which have amused mankind, the following instance merits a conspicuous rank. Some years ago there were several large elm trees in the College Garden, behind the Ecclesiastical Court, Doctor's Commons, in which a number of rooks had taken up their abode, forming in appearance a sort of *convocation* of aerial ecclesiastics. A young gentleman who lodged in an attic, and was their close neighbour, frequently entertained himself with thinning this covey of black game, by means of a cross-bow. On the opposite side lived a curious old civilian, who observing from his study that the rooks often dropt senseless from their perch, no sign being made to his vision to account for the phenomenon, set his wits to work to consider the cause. It was probably during a *profligate* time of peace, and the doctor having plenty of leisure, weighed the matter over and over, till he was at length satisfied that he had made a great ornithological discovery. He actually wrote a *trechise*, stating circumstantially what he himself had seen, and in conclusion giving it as the settled conviction of his mind, that rooks were subject to *epilepsy*.

#### HISTORICAL SKETCHES.

THE SAXON OCTARCHY from Alfred the Wise, A. D. 884, to the death of Egbert in 836, and the period of the Danish Invasions.

The history of our Island becomes now doubly interesting. The events are of greater magnitude, and to the chivalry and romance of heroic feats, is super-added the deeply attractive charm of northern literature and mythology. We shall also come more distinctly to the manners, endowments, &c. of our Saxon progenitors; and Mr. Turner's mode of treating these subjects is so excel-

lent, that it will be our disgrace if the sequel sketches are not of a character to merit public approbation.

Alfred, surnamed the wise, the eldest but illegitimate son of Oswy, succeeded his brother Egfrid in Northumbria, in 684. He was, for his learning, the worthy precursor of his greater namesake of Wessex; and the first literary Anglo-Saxon King noticed by the venerable Bede, who calls him, however, Alclifus. His preceptor was Wilfrid, an ecclesiastic, who had studied in Rome and France, and whom he raised to a bishopric, in the second year of his reign, but afterwards banished on imperative grounds. During the reign of his violent brother, he led a life of retirement, study, and piety, in Ireland; and when he mounted the throne without a crime, brought with him the knowledge he had thus cultivated, and the virtues he had thus acquired. It is not one of the least honours to his memory, that even in that age of turbulence and rapine, he was the zealous encourager of literature. Among those whom he patronized, were Arculfus the traveller, and Adamnan his editor. This Arculfus surveyed many holy and remarkable places, Jerusalem, Palestine, Damascus, Constantinople, Alexandria, and the Archipelago. Returning home, a tempest drove him upon the British shores, where the story of his travels found an eager auditor in Adamnan, who committed it to writing. The celebrated West-Saxon scholar Aldhelm, was another of the protégés of Alfred; who closed his peaceful reign about 708-9, respected and admired by all ranks of the people. He was rapidly succeeded by Eadwulf and Oerel: to whom, in 731, succeeded Ceolwulf, the friend of Bede, who retired to the cloister about 737. Eadbert, his successor, after a successful reign of 21 years, followed this example, and was the eighth Anglo-Saxon monarch who exchanged the crown for the cowl. Northumbria after this, 757, became an arena of ambitious usurpation, civil discord, and murder. Before the end of the century, eight or ten kings were assassinated or expelled, and a new revolution marked every short interval of from twenty days to five or six years.

Contemporary with the era, we have so shortly described, Ceadwalla obtained the throne of Wessex, conquered Sussex, took the Isle of Wight, and ravaged Kent. His cruelty to the latter province, was aggravated in consequence of the Kentish men having surprised his brother Mollo with twelve followers, in a cottage at or near Canterbury, whom they surrounded with flames and consumed: 30,000 marks of gold were paid as a mulct for this act in 694, and it was expiated in this way after causing years of devastation and misery. Ceadwalla, in 688, went on a pilgrimage to Rome, where he was baptized Peter, by the Pope, and died in the following week at the age of 30. This pious custom of going to Rome and turning monk, seems to have been common in those days; for Cenred king of Mercia, Offa king of Essex, and the powerful Ina, who succeeded to the throne of Wessex, all followed Ceadwalla's example, within no very remote period; and

their example was in turn followed by thousands.

The name of Ina is famous in Anglo-Saxon history, both for legislation and warlike exploits. His defeat of Geraint the third of that name, British king of Cornwall, and his bloody contest with \* Ceolred king of Mercia, are memorable events; but he is perhaps as generally known in our times from having been the brother of Inigila, who died A. D. 718, the ancestor of Egbert and Alfred and the succeeding Saxon monarchs of England, as by any circumstance peculiar to himself. Yet, Ina rebuilt Glastonbury Abbey and dedicated it to the memory of his brother Mollo; and it was only after a fortunate reign of thirty-seven years, in A. D. 721, that a conformity with the advice of his queen, he consented to retire from worldly, and devote himself to heavenly concerns. The means by which she wrought this change are very characteristic of the age. "One day as he travelled with the king to one of his rural mansions, where a splendid feast was prepared with all the pomp and bustle of royal luxury, he seized the occasion of converting it to a moral lecture on her favorite theme. They left the place after the repast, and a rustic by her orders in their absence, scattered the festive hall with filth and rubbish, and placed a swinish litter in the couch where he had reposed. Before they had advanced two miles on their road, she desired to return, and Ina courteously complied with her request; but when he entered the hall of his festivity, and saw the disgusting change, he contemplated it with silent astonishment and displeasure, till informed that the queen had directed it: he demanded of her an explanation of the strange mystery. She smiled, and answered:—"My lord and husband! this is not indeed the noisy hilarity of yesterday: here are no brilliant hangings, no flattery, and no parasites: here are no tables weighed down with silver vessels: no exquisite delicacies to delight the palate: all these are gone like the smoke and wind. Have they not already passed away into nothingness? And should we not feel alarmed, who covet them so much, because we shall be as transient? Are not all such things, are not we ourselves, like a river, hurrying, heedless and headlong, to the dark ocean of limitless time? Unhappy must we be, if we let them absorb our minds. Think, I entreat you, how disgusting those things become of which we have been so enamoured. See to what filthy objects we are attached. In these outsome relics we may see what our pampered bodies will become. Ah! let us reflect, that the greater we have been, and the more powerful we are now, the more alarmed should be our solicitude, for the greater will be the punishment of our misconduct."

The effect of this lesson on Ina was such, that he resigned his crown to his kinsman Ethelbald, and travelled to Rome, accompanied by a multitude of nobles and plebeians, clergy and laity, men and women.

\* It is of this king, that Boniface (Malinab. 18) relates a dying conversation between him and the devil, who came for him in the middle of a feast.

At Rome, he founded a Saxon school and church, for the instruction of his countrymen who wished to be educated there; and for their support imposed the payment of a penny on every family, which was denominated *Romescot*, and sent to the papal see. He then threw off all pomp, and even laboured for subsistence till his death, about 731.

For the preceding century, the mutations of the Saxon kingdoms had been generally from a heptarchy to a hexarchy; and though they all in turn suffered separately, yet the aggregate of intelligence and power had gone on most rapidly augmenting. At the epoch of Ina's death, there was a hexarchy. Wessex having absorbed Sussex, and Deira and Bernicia being amalgamated in Northumbria. Ethelbald, a descendant of Wybba, reigned in Mercia, to which kingdom Essex, though still nominally independent, was almost an appendage. Eadbert had succeeded Wilfred (whose laws are extant) in Kent; but we find, soon after, several contemporaneous kings in that small district, strikingly illustrating the gavel-kind tenure of lands which still prevails there. And in East Anglia, Selred, the successor of Aldulphus, held the sceptre. The kingdoms and the kings therefore were Wessex, Northumbria, Mercia, Essex, Kent, and East Anglia:—Ethelheard, Oswic who left his crown to Ceolwulf, Ethelbald the founder of Croyland monastery, Suerbricht, the brother of that Offa whom we have mentioned as one of the monarchs who retired to Rome, Eadbert, and Selred.

The wars for the next sixty years, viz. to 800, when Egbert ascended the throne of Wessex, and thence gradually attained universal supremacy, may be briefly dismissed. The struggle for superiority between that kingdom and Mercia vexed the age, in which Offa the Mercian Sovereign was one of the most renowned personages. It was this prince who subdued Kent, and parts of several other states; who founded the Abbeys of St. Albans and Bath; who corresponded with Charlemagne, and is treated by him as a friend: one of his letters, anno 777, (*Du Chesne Scrip. Fr. Vol. ii. p. 620*) notifying the present of a belt, a Hungarian sword, and two silken cloaks. Offa was also a scourge to the Britons, and built an immense dyke for a hundred miles, from the estuary of the Dee to the mouth of the Wye, the remains of which are still visible. This trench and rampart, traversing marsh, mountain, and river, was called *Claudioff*, and was used for ages afterwards as the jealously guarded boundary which determined the confines of England and Wales. Offa's character has been deeply stained however by the murder of Ethelbert, the youthful monarch of East Anglia, who was treacherously slain in Mercia, whither he went to marry Etheldritha the king's daughter; and East Anglia was annexed to the dominions of this perfidious assassin. Within two years of this cruel act, divine vengeance overtook Offa and his race, which became extinct in Egfrid his son, and short-lived successor. About ten years before this, namely in 784, Cynewulf of Wessex was assassinated while

visiting a lady at Merton, Surrey. He was succeeded by Brihtic, a descendant of Cerdic, married to Eadberga daughter of Offa, in 787, the year in which, according to the Anglo-Saxon writers, the Danes first landed on the English shore. Brihtic, long subservient to his abandoned wife, was at last accidentally poisoned by her; and the crown of Wessex passed to Egbert, the son of Alcmund or Ethelmund, the great grandson of Inigila, the brother of Ina, and the only descendant of Cerdic then in existence.

The life of Egbert is so familiar to the readers of history, that we need not dwell on its particulars. His youth was partly spent with Charlemagne, in whose wars he distinguished himself. In 800, when called to the throne, the Saxon monarchies were fast verging into a triarchy—Mercia, Northumbria, and Wessex. The latter, at no great distance of time, predominated over all. Soon after the death of Kenulf, the able ruler of Mercia, in 819, Egbert, who had before extended his power by invading the Britons in Devonshire and Cornwall, came into collision with the Mercians, and in 823, defeated them irremediably at Wilton. He then subdued the Mercian auxiliaries, Kent, and Essex, raised the East Anglians against that state, and finally invaded and imposed a tribute on Mercia itself.

Northumbria, weakened by intestine struggles, next felt his power; and Eanred its king met him at Dore beyond the Humber, and acknowledged his superiority. He also over-ran Wales and Anglesey, and appointed his son Ethelwulf king of Kent; so that the Danes, probably under the famous Ragnar Lodbrog, were the only enemies who gave him trouble, at the period of his death, full of glory, in 836.

#### BRITANNY.

Of a country so near to us, and yet so imperfectly known, we do not fear tiring the patience of our readers by a continuation of the accounts from Mrs. Stothard's amusing volume \*. At page 209 there is a very interesting convent scene, and a long dialogue with some of the Ursuline nuns: it may be a little theatrical for perfect accuracy, but our reason for not quoting it is the space it would occupy. We pass to a narrative equally spirited, and of more general attraction. Mrs. S. writes thus from Josselin:—

"I am now writing to you from a place with which we are delighted, although inhabited by Bretons, and so remote, that we had some difficulty in procuring any conveyance hither. The post-house at Ploermel had horses, but no cabriolet. After some trouble, we engaged the only vehicle that the town could afford, a little cart without springs. Fortunately the journey was short, or we should have left our baggage to the postillion's care, and walked the greater part of the way, as less fatiguing than being so

\* 4to. pp. 322, with some very sweet and characteristic etchings, owing to improvements on which, after we had procured our copy of the work, the publication was retarded till this week.—Ed.

intolerably jolted about. We passed through a most beautiful country, variegated with hills, valleys, woods, and water, till we halted upon a desert heath, to view the spot so celebrated from having been the scene where the memorable battle of Trent was fought, in the time of our Edward the Third. A stone cross was formerly erected in commemoration of the event; the broken fragments now alone remain, as they were left by the Revolutionists, who threw it down. This heath is situated exactly half-way between Josselin and Plœrmel, either town being in view. The former lies in a valley, surrounded by picturesque scenery; and the latter appears rising in the midst of woods, upon the summit of a gentle eminence. Upon the base of the broken cross appears the following inscription:

*À la mémoire perpétuelle de la Bataille de  
Trent, que Mgr le Maréchal de Beaumanoir,  
a gagnée dans ce lieu l'an  
1350.*

"I cannot here pass an action so celebrated without some brief mention of the principal events which distinguished it.

"Sir Thomas Dagworth, an English knight, was killed by the people during his stay in Brittany; an act that greatly exasperated the English, who took every opportunity of revenging it, by devastating their country and burning their towns. Beaumanoir, desirous of preventing a continuance of such outrages, sent to Bembro, an English knight in the Breton service, then stationed at Plœrmel, and entreated a conference with him. In this debate it was agreed, that thirty Englishmen and thirty Bretons should meet at the half-way oak tree, between Josselin and Plœrmel, to decide by combat the grievances of which they complained. The battle was fought in the month of March, A.D. 1350. Bembro's troops consisted of English, Germans, and Bretons; amongst them were Sir Robert Knolles, Sir Hugh Calvely, and a remarkable strong man, named Hulbitt. Beaumanoir had several knights of his party, Geoffrey du Bois, and the Lord de Fautenac; the remainder of his troops were all squares of renown. Before the commencement of the combat, Bembro represented to his adversary, that he had engaged without the permission of their several princes. To this Beaumanoir replied, that such a consideration was now too late, and they would try that day in battle, which had the fairest mistresses. The arms of the combatants were various, for every man had the privilege of using whatever weapon he thought best: the warrior (probably the powerful Hulbitt) bore an iron maul weighing twenty-five pounds. The two chiefs, Bembro and Beaumanoir, encouraged their men both by exhortation and example, and having ranged their several parties in order of battle, the furious onset began, each resolving by a gallant bearing to maintain that day the honour of their cause. The English fought with confidence, inspired by the remembrance of a prophecy of Merlin's, which had predicted their success. The contest was fierce and sanguine; Bembro fell dead upon the

field. Beaumanoir, exhausted with fatigue, and faint from loss of blood, in consequence of the wound he had received, was retiring from the field to drink, when Geoffrey du Bois exclaimed, "Drink thine own blood, Beaumanoir, and thy thirst will cease." The Breton chief, angered by the taunt, returned to the field with unslackened thirst, and there evinced such an undaunted spirit, that terror and dismay followed his steps. The English stood firm, but their ranks became broken, and the Bretons finally triumphed. The combat, however, did not end the grievances of the Bretons, or decide the disputed title of the duchy."

The immediately succeeding contrast of modern manners to this lively sketch of ancient chivalry is highly picturesque.

"We are now (continues the fair authoress) in the very heart of Brittany. The poor inhabitants in the towns talk a kind of French that I am sometimes puzzled to understand; but the country people speak nothing but the Patois or Breton tongue. They wear a singular costume, and, in their manners and appearance, much resemble the idea I have formed of human beings quite in an uncivilized state of society.

"We met a wedding to-day returning from church, the bride and bridegroom were peasants in the vicinity of Josselin. The nuptial train was preceded by a long-haired minstrel, playing upon the bag-pipes: he advanced in a half-dancing step to the accompaniment of his own music, attired in the slangy spoils of the goat: his grotesque air and rude gestures, his furry habit and minstrel trade, gave to his appearance the character of a wild satyr in some sylvan scene. The cavalcade followed, dressed in the fashion of their country, rendered still more gay by the many knots of various coloured ribbands that were placed about their garments.

"They have in this province a most strange custom of celebrating the publication of a contract of marriage, which is affixed to the church door about three weeks before the performance of the ceremony. Last night we were sitting in our inn, enjoying the comfortable warmth of a wood fire, when our ears were suddenly assailed by a strange combination of distant sounds: the noise continued so long, that curiosity at length induced Mr. S—— to ascertain whence it arose; he followed the sound, and perceived in the outskirts of the town thirty or forty men and women assembled together, who, hand in hand, were jumping and dancing like savages, in a ring, to no other music than the accompaniment of a monotonous sing-song repetition of two words, which they all shouted in unison, without the least intermission. They continued this nocturnal rite for nearly three hours, in celebration of a contract that had been made public in the morning.

"If you will grant me the patience to follow me into a Breton cabin, I will present you to a group of these wild beings; such a scene will afford you a better idea of their manners and mode of living than any comments of my own. I yesterday went into the market, at the most busy time, in order to observe the people; when I remarked a girl

attired so completely in the costume of the country, that I thought it would be desirable could I engage her to sit for her picture. She placed some sacks of corn upon her horse, and was about mounting to quit the market, when I spoke to her in French; she answered by shaking her head, and uttered a few words in Patois, of which I could only make out the word *gaelic*. A woman standing at the door of a wretched hatter's shop came forward and offered her services as my interpreter. The affair was soon settled, and the girl consented to sit for her picture. She was from Bignann, a neighbouring town, and as her costume is that of the country in general, I shall here describe it. She was dressed in a petticoat or skirt of white flannel, bordered with a scarlet band above the hem; this skirt is sewed to the body in large flat plaits; the body or jacket was made of scarlet cloth, tight to the shape, and reached nearly up to the throat; the sleeves were of the same colour, sitting close to the arm, and turned up at the wrist with a deep cuff; both the body and sleeves being trimmed with a braiding composed of black velvet ribbon, embroidered with coloured worsteds; her apron was of a deep mulberry colour, fastened with an ornamented sash, tied in a bow at the side; her cap of white linen sat tight to the head, covered with another cap, that served the purpose of a bonnet; this was made of a coarse starched cloth, like brown Holland, the form conical, with two long flaps hanging down her back, or sometimes pinned up at the pleasure of the wearer; her necklace was of amber, and black beads; she wore also, suspended by a velvet string, a little ebony crucifix, with the image of our Saviour upon it, wrought in pure gold; from the appearance of this ornament, I should imagine it must have descended to her as a family relic, as it is certainly of ancient workmanship; her brooch, that fastened her shift in front, was formed of white bugles and green glass beads, put together in a very pretty manner. In her person, this damsel appeared of a thick-set shape, broad backed, and high shouldered; her face round and fat, with a complexion naturally red, and much tanned by the effects of the sun, and field-occupation; the expression of her countenance might justly be termed that of a stupider animal existence, although not more than eighteen years old, (for the Breton women are so unsophisticated as to deny their age) she looked much past thirty. Such was the charming creature I selected for the pencil of Mr. S——, and such are generally the female natives of Bretagne, to whom this picture may be in common apply.

"The girl was in too great haste to go so far as our inn; the woman offered the use of her cabin, and the portrait was immediately commenced; but we were no sooner seated, than a number of Bretons pressed in to see so extraordinary a sight. They all spoke Patois, and were even vociferous in their loud exclamations of surprise, their wild and strange looks, their gestures and voices were like those of half-frantic beings. Many of them appeared so dirty, that I could scarcely see the colour of their skin. They seemed a

have no idea of the distinctions of condition; for some of the girls, in order to examine my dress, turned me round, and with their dirty hands most unceremoniously handled my gown or pelisse. Several Bretons seated themselves upon the ground, to watch the motion of Mr. S——'s hand, others pressed around him, and even attempted to touch the pencil he was using, to ascertain, I imagine, what such a magical little implement could be.

"A party of these Bretons placed themselves at a table, in order to regale, and brought in a large jug of cider, that was handed about, and soon emptied and replenished. The girl, whose sitting to Mr. S. had attracted such a multitude, was plentifully supplied with cider by her companions; and a woman, who seemed to be a person of authority amongst them, ordered another jug of their favourite drink, at the same time pointing towards me. As soon as it appeared, she suddenly jumped up, and throwing herself across the table, seized me so roughly by the arm, that I staggered back a few paces; she violently shouted to me in Patois, as if she thought I could understand her the better by the exaltation of her voice, and thrusting the jug of cider in my face, wanted me to partake of the contents; I turned aside my head, and by signs, made her comprehend I declined her offer; but the fierce look she gave me, and the loud and angry exclamation that accompanied it, convinced me she resented my refusal."

#### LUCCOCK'S NOTES ON RIO DE JANEIRO, &c.

We continue our miscellaneous extracts of what is curious from this work; which, though they can afford only an imperfect idea of it, will, we trust, be found amusing to ourselves.

"Near the venda is the ruin, or rather the unfinished skeleton, of a church founded by the Jesuits. In the midst of it grew the largest Mammon tree, which we had ever seen; we gathered and enjoyed a part of its fruit. Our road now led us over a shady plain, formed by the action of the sea, of a sufficient age to produce much good timber, and afford a site for some considerable farming establishments. Many extensive patches formerly produced indigo, and on them the neglected plant still grows most luxuriantly.

"Numerous are the evidences which the ruins have left, in this part of the country, of the power and splendour of their order, and of its admirable political management. Speaking generally and dispassionately, it may be said, that whatever was well conceived and executed was done by them, and that the common prosperity and happiness have declined since their dispersion. Yet it must be acknowledged, that they were little scrupulous in the use of indirect means to attain their ends. Two circumstances, illustrative of this fact, are related in the neighbourhood.

"The society asked, and easily obtained from Lisbon, the privilege of a tax on *esmagos*, which word, in Portugal, describes

small nails, and the government was well aware that such articles were here little used. In Brazil it means a fastener, and is applied particularly to *Sipó*, the plant twig, which is universally employed to bind together the frame-work of buildings. So established was a thing once brought into general use, that, long after the dissolution of the order, the tax, diverted to a different quarter, is still a subject of complaint.

"The other instance occurred about the time when the society became suspected at court. By a petition it stated, that there was a piece of water belonging to the crown, which would be useful to the house at Santa Cruz as a duck-pond, and prayed for a grant of it. It was not thought expedient to comply without examination, and on enquiry it turned out that the pond was no other than the bay of Angra, containing four hundred square miles of water, and several valuable fisheries. The idea of a duck-pond was probably suggested by the multitude of wroven divers, here called *patois*, which then appeared in the bay, and are still occasionally seen on flat and unfrequented shores."

"No stranger can possibly conceive the number of frogs found on the swampy grounds, nor the noise which they make. It was a common diversion when they issued from their lurking places at night, to procure a forked stick with sharp points, and to strike it on the ground, without any very particular selection of place, until the forked part was full of them; these were stripped off, and the operation recommenced; thus many hundreds were killed in a very short time.—Ants of several species also are a most serious pest. Every house and almost every yard of dry ground is infested with them, and the wounds which they inflict are painful and irritating; arising, I suspect, not from the mere bite, but from some venomous fluid left by them beneath the skin. The wandering Indians who cannot escape them, cultivate in their warriors not only a contempt of such molestations, but a general spirit of stern endurance, by placing them in a nest of these insects. In this country these insects present no lesson of useful labour; they are restless and active, but as it seems to me, to no purpose. I have observed them carrying a heap of sand through a hole in a wall, dropping it on the opposite side, and when the whole is cleared away, carrying it back again with the same air of important occupation.—In the list of country torments must also be placed many various kinds of snakes, mosquitoes, flies, wasps, fleas, and *carapátos*, whose annoyance is unceasing."

The following is a remarkable example of Indian revenge.

"From this spot (on the plains of Oitú) the road advances, nearly sixty miles, to the Parahyba, running through a broken and thinly inhabited country. The principal places lying upon it are Pao Grandé and Uva. Near the latter a circumstance occurred, which shows the Indian character, and the risk attending a settlement on new lands. Two gentlemen having obtained a grant, sent a person, accustomed to the country, to settle upon it.

Probably by some means he offended the Indians remaining in the neighbouring woods; for one day a shot fired at him struck the powder-horn in his waistcoat-pocket, and wounded him in the wrist. Being on horse-back he instantly pursued his assailants, and saw two Indians, who escaped from him in their usual mode. In such cases the fugitive endeavours to reach the brow of a hill little encumbered with wood, where, dropping on his breech, he puts his head between his knees, and his arms round his ankles; in this state, being nearly as round as a ball, he precipitates himself from the brow, and rolls speedily to the bottom. From this circumstance, I apprehend, the Indians take their modern name of *Boiticudies*; or *Butucudies* a barbarous word, half Tupi, half Portuguese, signifying fallers by the breech. The man who had been wounded was obliged to come down to Rio for surgical assistance. On his return he was seriously cautioned against exposing himself to similar attacks. About fourteen days after, as he was riding along the road, followed at some distance by a slave, a shot, fired again by an invisible hand, threw him forward on the saddle, and a second brought him to the ground. Two Indians then came out of the wood, one of whom walked deliberately to the negro, and ordered him to halt, while the other went to their victim, broke his legs, and beat out his brains. Afterwards they shot the horse and decamped. Every search was made for them, but these people are too well acquainted with the forests to want secure lurking places, and defy, if they have any knowledge of the art of justice. The establishment was broken up, and remains neglected, until the natives are so harassed as to induce them to quit the neighbourhood."

Travelling from St. Gonzales, the country declines to the plains of Guaxendiba. "A well-cleared, populous, and fertile region presents itself for several succeeding miles, gradually exchanging tillage for a large extent of pasture, and afterwards for woods, which seem nearly untouched. Among them we meet with many monkeys, parrots, and arapongas, birds which make a harsh noise, like that produced by a blacksmith's hammer, when falling on the anvil, rebounding and striking again. The note commonly proceeds from the higher lauds and resounds through the forests. The swampy plains which succeed these woods, afford nothing worth notice, but that the road across them is formed of the branches of trees, laid transversely over logs placed longitudinally. Such roads are good, while the timber continues sound, and when partly decayed, the cattle of the country traverse them with safety; but become dangerous to horses and mules unused to them.

"Amidst these plains arise many vast detached masses of granite, similar to those noticed before, and of the same singular form. We passed close to one, which though several miles in length, and rising to the height of five or six hundred feet, seemed to be an entire stone, without a fracture, or even a fragment lying at its feet."

A little further on "about four miles from America, we passed over the lake of the same name, at a part which is not more than five or six hundred yards wide, and three or four feet deep. It is nearly eight miles long, and in some places two in breadth. The bottom is a hard sand, yet from the abundance of aquatic plants, it probably contains large patches of mud. Like the other lakes, it has on it multitudes of divers gallinules d'agua, gulls, and urubis. The fishery is claimed by government, and is let to the highest bidder, for a term of three years. Its Tupi name, cururupina, the stinging toad, is manifestly derived from one of the most disgusting inhabitants of the water, which resembles a toad in its figure, with long flexible rays instead of legs, the spines of which it throws out at pleasure, and inflicts with them painful punctures." Onward still, at Ponta Negra, a farm was offered for sale.

"Among the productions of this farm, the owner enumerated Ipecacuanha; but on attempting to show us the plant, found, as he alleged, that the sheep had eaten all the leaves. Doubting the fact, we questioned him closely; yet he persisted in maintaining that the sheep ate it with avidity, and that it did them no harm. There were certainly many of the roots in the ground, for we easily drew out some of them with a knife. I have since found reason to believe that this was the white Ipecacuanha, which is of the mildest species."

The Brazilian porcupine is one not the least singular among its animals. Mr. L. relates, "on a broad sandy plain, north of St. John, which is covered with coarse herbage, and lies between the beach and the mountains, we met with a Brazilian porcupine, and attempted to drive it before us. The animal is naturally slow, and to urge it to greater speed, and prevent its escape among the shrubs, I made use of my hat, a Leghorn one, lined with leather at the back part of the brim. Being released from the office of driver by some boys, who willingly undertook it, and about to put on my hat, I was surprised to find several of the animal's quills sticking in it, which had penetrated the leather as well as the straw. This circumstance induced me to think that they are discharged with considerable force; and this opinion was confirmed by my hearing one of the boys cry out that he was wounded in the leg; a misfortune to which his companions evidently thought themselves liable, and which rendered them cautious. It is probable that the hat might be very near, if not actually touching, the porcupine, when the quills struck the brim, and that, at a greater distance, they might have fallen to the ground. Yet the wound which the boy received showed that they could take effect at the distance of several, if not of many inches. The quills were nearly an inch long, had a hard, sharp, brown point; the other end hollow, of a pale straw, inclining to flesh colour, and the intermediate space had alternate rings of bright yellow and brown. These points appeared perfectly smooth and polished; but their effect on dogs, which

seize the animal in hunting, indicates that they are really barbed, for they work into the tongues and gums of the poor howling creatures, and cannot be extracted without violence. The little wounded boy crying and complaining bitterly, I hastened onward with him, and on my return found that the other urchins had beaten the animal to pieces, and thus avenged their companion and robbed us of a part of our supper; for in eating we had acquired some conformity to the habits of the country. Besides porcupines, there are here many land-crawls, and dogs of a small species, which devour them. We saw also the skin of a boa constrictor, about twelve feet long and nine inches broad; in the inhabited parts of Brazil these formidable reptiles are generally discovered and destroyed before they attain a larger size."

Mr. Langsdorff, the Russian Consul, showed the author a phenomenon in natural history; namely, "a plant which he had discovered in his grounds, having, as he said, the singular property of producing, not only its root and stem, but also its flowers and seed vessels entirely under the surface of the earth. He possessed here also a very fine specimen of the aca, and for several years has been engaged in forming a complete cabinet of Brazilian insects."

Proceeding in a journey northward, "at the end of the plain we crossed a stream from the westward, which bears strong marks of occasional violence, and, a little beyond the bridge, saw some orioles in their pendulous nests upon lofty trees. Just as I had stepped into the low brushwood with which the ground was covered, and put the gun to my shoulder, to bring down a bird, my attention was suddenly drawn downwards; there I saw a large snake passing within a few inches of my toe. To start backward was involuntary. I lowered the piece and wounded him, but he dragged his length across the road and escaped among the bushes, for I thought him an enemy too formidable to be incautiously roused. He appeared to be six or seven feet long, five or six inches round, had a dark brown back and yellowish belly, dashed with black oval spots, which were particularly large on his sides. His eye was exceedingly brilliant, as is the case, I believe, with most of these reptiles, seeming to reflect, as well as to bear, the full splendour of the sun. I have seldom found myself able to look steadily upon them. He moved, as do all Brazilian snakes with which I am acquainted, in horizontal curves, though sometimes represented in British prints, with vertical ones. When we met at the next station, our people complained of having been molested to-day with an unusual number of these reptiles, and supposed that they had been driven from the mountains by the dry weather, and were in search of water."

(To be continued.)

#### CUSTOMS, &c. OF AMERICAN INDIANS. (Continued from last.)

The author relates several instances of high-mindedness or honourable pride among the Indians; of which we select one.

"In the spring of the year 1782, the war chief of the Wyandots of Lower Sandusky sent a white prisoner (a young man whom he had taken at Fort McIntosh) as a present to another chief, who was called the Half-king of Upper Sandusky, for the purpose of being adopted into his family, in the place of one of his sons, who had been killed the preceding year, while at war with the people on the Ohio. The prisoner arrived, and was presented, to the Half-king's wife, but she refused to receive him, which, according to the Indian rule, was, in fact, a sentence of death. The young man was, therefore, taken away, for the purpose of being tortured and burnt on the pile. While the dreadful preparations were making near the village, the unhappy victim being already tied to the stake, and the Indians arriving from all quarters to join in the cruel act or to witness it, two English traders, Messrs. Arundel and Robbins (I delight in making this honourable mention of their names), shocked at the idea of the cruelties which were about to be perpetrated, and moved by feelings of pity and humanity, resolved to unite their exertions to endeavour to save the prisoner's life by offering a ransom to the war chief, which he, however, refused, because, said he, it was an established rule among them, that when a prisoner who had been given as a present, was refused adoption, he was irrevocably doomed to the stake, and it was not in the power of any one to save his life. Besides, added he, the numerous war captains who were on the spot, had it in charge to see the sentence carried into execution. The two generous Englishmen, however, were not discouraged, and determined to try a last effort. They well knew what effects the high-minded pride of an Indian was capable of producing, and to this strong and noble passion they directed their attacks: 'But,' said they, in reply to the answer which the chief had made them, 'among all those chiefs whom you have mentioned, there is none who equals you in greatness; you are considered not only as the greatest and bravest, but as the best man in the nation.' 'Do you really believe what you say?' said at once the Indian, looking them full in the face. 'Indeed, we do.' Then, without saying another word, he blackened himself, and taking his knife and tomahawk in his hand, made his way through the crowd to the unhappy victim, crying out with a loud voice: 'What have you to do with my prisoner?' and at once cutting the cords with which he was tied, took him to his house which was near Mr. Arundel's, whence he was forthwith secured and carried off by safe hands to Detroit, where the commandant, being informed of the transaction, sent him by water to Niagara, where he was soon afterwards liberated. The Indians who witnessed this act, said that it was truly heroic; they were so confounded by the unexpected conduct of this chief, and by his manly and resolute appearance, that they had not time to reflect upon what they should do, and before their astonishment was well over, the prisoner was out of their reach."

The manner in which these people act

owards their enemies is equally remarkable.

"Courage, art, and circumspection, are the essential and indispensable qualifications of an Indian warrior. When war is once begun, each one strives to excel in displaying him, by stealing upon his enemy unawares, and deceiving and surprising him in various ways. On drawing near to an enemy's country, they endeavour as much as possible to conceal their tracks; sometimes they scatter themselves, marching at proper distances from each other for a whole day and more, meeting, however, again at night, when they keep a watch; at other times they march in a what is called *Indian file*, one man behind the other, treading carefully in each other's steps, so that their number may not be ascertained by the prints of their feet. The nearer they suppose themselves to be to the enemy, the more attentive they are to choosing hard, stony and rocky ground, on which human footsteps leave no impression; soft, marshy, and grassy soils are particularly avoided, as in the former the prints of the feet would be easily discovered, and in the latter the appearance of the grass having been trodden upon might lead to detection; for if he grass or weeds are only bent, and have at least mark of having been walked upon, it will be almost certainly perceived, in which the sharpness and quickness of the Indians' sight is truly astonishing.

"In some instances they deceive their enemies by imitating the cries or calls of one animal, such as the fawn, or turkey. They do this so admirably well, that they even draw the dam of the one and the mate of the other to the spot to which they want them to come. In this manner they often succeed in decoying the enemies to the place where they are lying in ambush, or get an opportunity of surrounding them. Such stratagems, however, cannot be resorted to at all seasons; with the turkey, it only answers in the spring, and with the fawn's dam until about midsummer. In the same manner, when scattered about in the woods, they usually find each other by imitating the song of some birds, such as the quail and the cock, and at evening and morning, and particularly in the night, the cry of the owl. By this means they all join each other, though not at the same time, as they are not, perhaps, all within hearing; but the cry of the owl is repeated from time to time until they are all assembled."

## ORIGINAL CORRESPONDENCE.

### ANECDOTES OF CURRAN.

To the Editor of the *Literary Gazette*.

Sir.—In Phillips's life of Curran, we have a vast deal in that gentleman's peculiar style, about the great uncleanliness, and the tender feelings of his hero, concerning his domestic circumstances. There is much mention of the same kind in O'Regan's Memoirs of Curran; but I am very much inclined to think that no such sorrows existed. In Ireland it is very generally believed that Sir Curran was an extremely injured wo-

man, and her family, a highly respectable one, received her with open arms after the verdict obtained against her supposed paramour. Many ugly stories are current with respect to the evidence adduced on that trial; and Curran was so anxious to hinder the proceedings on it from obtaining publicity, that he had notices served on all the newspapers of Dublin, enjoining them not to publish it; and accordingly it never was given to the public.

The reason that inclines me to think that he never felt very severely on his matrimonial misfortune is the great levity with which he was frequently in the habit of speaking about it. A couple of coarse jests on the subject have come to my knowledge; for the accuracy of the first of which I can positively vouch, and the second I have on tolerably good authority.

He was a fine musician, and had frequently concerts in his house in Dublin. At one of these, a young barrister of Cork, a distinguished amateur, bore a part. After the concert had concluded, Curran went up to him, and said, "Well, H. what do you think of that? Do you not think it at least as good as any of your Cork concerts?" "Why," replied his friend, "it was very fine; but in Cork we can procure military music much more readily than you can in Dublin: the want of it was very discernible in your concert; for instance," said he, repeating a passage, "would not the French horn have made a great improvement there?" "Well, H.," said Curran, laughing, "you are the first who has complained of the want of horns in my house."

On another occasion, he and the late Sir Richard Musgrave, the historian of the Rebellion in Ireland, whose lady's frailties were numerous and notorious, met at the house of a common friend. They were decidedly hostile in politics to each other, and had even proceeded to personal altercations. On being summoned up stairs to the dining room, they happened to arrive at the foot of the stairs together, and, as is usual on such occasions, when enemies meet, their behaviour was ceremoniously polite. Weary at length of alternately conceding the *pas*, Sir Richard, assuming an air of familiarity, took him by the arm, and said, "Well, well, let us settle the matter by walking up together." "Pardon me, Sir Richard," replied Curran, "that is impossible; our antlers would entangle." He that could jest thus, could not feel deeply.

I have heard also, that on the day of the trial in which his wife's character was involved, he appeared in an obscure corner of the court, where however he could be seen by the opposing lawyer, and there diverted himself with putting him out during his speech, by erecting his fore-fingers over his ears, making faces, and performing various droll gesticulations, for which he had a peculiar talent. Whether this be true or not, I cannot say; but it is commonly believed; and I am sure that could he hear half the eloquence bestowed on his woes by Phillips, he would laugh outright in his face. That he had not a very high opinion

of his biographer, the following anecdote will evince:—He came into Phillips's room one day while he was writing, and enquired what he was about. "I am writing a speech, sir," was the reply; "and I can tell you that I intend to give your friend, Mr. Grattan, a rating in it." "Never mind it, Charley," said Curran, "never mind it; it would only be a child throwing a stone at the leg of a colossus."

Curran's talents were of the very first order, but they were too often sadly misapplied; and the stern moralist would find much to censure, both in his public and his private life: but he was a highly fascinating man in conversation. His wit, his drollery, his eloquence, his pathos, were all irresistible. The only defect in him in this respect was a love of acting, which made his wit often degenerate into mere buffoonery, and his pathos into canting and overstrained sentiment. It must have been in some of these latter moods that his biographers observed his sensibility; but there never was anything real in it. It was often put on even to convey ill-natured remarks; and as my straggling letter (which has far outstripped the bounds I at first intended), has been little more than a vehicle of jests, I shall conclude by giving another, connected with this splenetic tenderness of heart. At a supper party in Brighton, I believe, he began to lament the desolation of his old age: he was a solitary unfortunate old man, he said, who had not even a child he could call his own. *His son was sitting at table with him at the very time.* This observation created much disgust in the company; and a young barrister who was present, in relating it afterwards to an elder brother of the profession, added, with much vehemence, "By G— if my father had said so in my presence, I would have forgotten all filial reverence, and knocked him down." "Ay," said the senior, "that would certainly prove you were not a natural son."

I have unconsciously intruded on your space, and must conclude by apologizing for it—and subscribe myself your humble servant.

D. O'C.

Dublin, Nov. 4th, 1820.

## ARTS AND SCIENCES.

### NORTHERN EXPEDITION.

We have this week little to add to the statements in our last Number, relative to the expedition which has so fortunately returned from the Polar Sea; but as every particular is interesting, we shall relate such as have reached us, till we are enabled, which we expect shortly to be, to lay a more detailed and comprehensive account before our readers.

After sailing over the Croker Mountains of Captain Ross (as we mentioned last Saturday, thus geographically unshipping a secretary to the Admiralty), Lieut. Parry gave to the continuation of Lancaster's Sound the name of Barrow's Sound.

[A lithographic chart made out at the Admiralty represents the former, according to

the newspapers, as about 150 miles in length and from 20 to 25 in breadth; and the same authorities mention that from the upper end the ships steered, in the first instance, 100 miles to the southward, then returned to the original point and proceeded direct west.]

On the north side of Barrow's Sound, the voyagers discovered a broad channel up which they could not descry any land, though the weather was clear and favourable. To the land bounded on the west by this unexplored channel, and on the south by the Sound, the name of New Devon was given. Nearly opposite the channel, *i. e.* on the south side of the Sound, they met with another broad Inlet (nearly as broad it seemed as the Sound itself) on which the name of Regent's Inlet was bestowed. The expedition sailed up this inlet a considerable way\*. The land opposite to New Devon was denominated New Somerset. Many whales and seals were seen about this part. Other places discovered, received names in honour of Major Rennell, Captain Sabine, and others.

We mentioned the only serious casualty which befel during the wintering of the crews in these high latitudes; nevertheless the cold was so intense that the utmost care was necessary to prevent fatal consequences. An idea of this may be formed from the fact, that a servant of Captain Sabine's, on some alarm of fire ran into the air without covering his hand—it was immediately frost-bitten, and the poor fellow lost three of his fingers.

No natives were seen, nor any traces of human beings.

**Copper-plate printing.**—The *Annales de Chimie* state, that a Mr. Gouard has discovered a method by which he can take impressions of any size, either larger or smaller, from an engraved copperplate, without the aid of another plate. The operation requires only a few hours; and, if the fact be correct, it is certainly a most important invention in the art of engraving, and will save immense expense in enlarging or reducing plates for various editions of works, or for convenient publication in every possible style that can be wanted for science or virtuous curiosity.

**New Globes.**—A Berlin artist, Mr. Charles P. Kummer, has recently published a globe with the mountains boldly executed in relief. This method impresses the subject more forcibly upon the mind than the mode hitherto employed, and is consequently admirably suited for geographical instruction and knowledge.

**Arts and Sciences in America.**—Mr. Randolph, an American chemist, asserts that he has re-discovered the long lost secret of the mortar or cement of the ancients, which was proof against fire, water, and the influence of time. He states, that his composition daily growing harder, becomes more and more solid and unalterable. He has not judged proper to make his secret known to the public.

Mr. Sheldon of Springfield in North Ame-

\* Future expeditions have thus it appears, much to explore besides sailing directly through Lancaster's Sound.

rica affirms, that he has discovered that the bark of the sweet chestnut tree (*Fagus Castanea*) contains twice as much of the substance used in tanning as oak bark, and almost as much dyeing matter as Campeachy wood.

## LITERATURE & LEARNED SOCIETIES.

MR. HOGG AND THE EDINBURGH REVIEW.

An Edinburgh friend informs us, and indeed we observe it stated in a public newspaper, *The Scotsman*, that the letter purporting to be from Mr. Hogg to the Edinburgh Reviewer of his Jacobite Relics, inserted in *Blackwood's Magazine*, is what in England is denominated a *hoax*, the production of the editor of the Magazine. Our friend adds, "the good folks in the North will have a hearty laugh at your simplicity in so gravely quoting the letter as Hogg's," &c. To this we can only say, that we are not ashamed of our simplicity, if it be simplicity to be imposed on by a paper of this construction, which our happy ignorance of the parties and squabbles which disgrace the press of the northern Athens prevented us from understanding in its true light. The wit and waggery of the article was quite lost upon us, and we dare say upon the great majority of its readers; which, we beg to suggest to the writer, is proof that this species of drolling may be carried too far. It is neither consistent with good sense, good taste, nor humorous to be unintelligible smart. But censurable as such misleading representations are, and injurious to any publication prone to them, as tending to cast a doubt on all its contents, and destroy its character for authenticity where it really means to obtain credit; we are infinitely more disgusted with the Billingsgate which has been introduced into the pages of disputing periodicals. If we do not greatly mistake the public feeling, their conductors had better leave their mutual quarrels alone, and stick to matters more useful and agreeable. It is very indifferent to the reading and respectable classes of society, what John o'Nokes thinks of Tom o' Stiles, or what grounds of rivalry exist between Blackwood and Baldwin, or their editors. One paragraph of information or light pleasantry is worth a hundred sheets of their silly disputes; and neither their own interests nor the interests of literature can be promoted by their indulging in invective and vituperation against each other. On the contrary, an amicable intercourse would be both more becoming in them, and more advantageous to the cause of letters, in which they are, or ought to be, engaged. It is always suspicious when publications in the same walk try to persuade the world that the most important service they can render to literature is to write down a competitor. They had better leave their respective merits to be appreciated by public discernment.—*Verbum sat.*

To the Editor of the Literary Gazette.

Sir,—Perhaps in your extensive opportunities, you could inform me whether it is true that by Sir Philip Francis's will, a box

containing matters of correspondence, was supposed to contain the *Janus* papers, was sent sealed up to Drummond's bank, with directions that it was not to be opened at a certain distant period; or till now, whether any indications have been left to decide the conjecture, so strongly argued in the pamphlet published by Taylor and Hesley, that he was the author of *Janus*.

I have the honour to be, &c.

AN ANTIQUARY.

## ORIGINAL POETRY.

BONNET.

There is a Shape, upon whose wrinkled brow  
Deeds dark and good, in many a line of light,  
Are character'd; and they who read aright,  
Thence learn to live uprightly. You may love  
Him by his murderous scythe, and beard of snow,  
And glittering eye, for piercing is his sight.  
As still in early youth: the blackest night,  
Past, present, and, to come, he looks through.  
He is immortal; yet shall he be sought  
Away and die, when from his heart the soul  
Shall cast its victims, that have soundly slept  
For ages:—then, the judgment flag unfurled  
Shall wave o'er man, and all his worth and crime

Be copied from that brow:—the shape is Time.  
L

EPIGRAM.

At Church, I heard our Parson say,  
We should not work on Sabbath-day;  
But oh! good Lord! with kule and fork,  
At dinner time, how he did work!

[By Correspondents.]

To the Editor of the Literary Gazette.

Sir,—The following verses were written by Mrs. Connell, a lady of the Upside-Down in the city of Cork, who died in October 1807. I think they are much too good to be lost; and if you agree with me in opinion, they are at your service. I am, Sir, your humble servant, J. J. W.

Cork, Sept. 30, 1820.

When reflection recalls the lost hours I have  
squandered,  
High swells my sad boom, and fast my  
tears flow,  
A stranger to peace and content, I have  
wandered—  
Can I cease to regret it?—Ah, no, never, no!  
In pursuit of a phantom whole years have I  
wasted;  
I sought it in dress, in amusement, in show,  
But ne'er in those scenes any sweets have I  
tasted,  
Or found but affliction:—Oh, no, never, no!  
At length in religion's sure path have I rested,  
And find all that bliss I can hope for below;  
In my God all my hopes, all my joys are now  
centered—  
Can I ever cease to love him? Oh, no, never,  
no,  
When death with his terrors, shall hang o'er  
my pillow,  
Undimmed at the sight, I shall meet in  
dire blow;  
Resign'd to my fate, I shall lie 'neath the  
willow,  
Where nought shall disturb me: oh, no, never  
no!

an that God, for whose service my all I have  
quitted,  
Who rewards, even here, hundred fold can  
bestow,  
an He let me die all unpardoned, unpitied,  
Or refuse me his mercy? Oh, no, never, no!

## A DREAM.

What—from the grave? And dost thou then  
dare to obtrude upon my sight?  
O dear thy revolting form again,  
how false and heartless parasite!  
—No! hushed is his calumnious tongue,  
’tho thankless as my father’s bread,  
nd, viper-like, his venom flung  
hearest his child—and smiled, and stung  
he heart that loved—the hand that fed:  
—*Safely* he withers with the dewd.

et,—at times—in my troubled sleep,  
hear his curses muttered deep;  
’th the horrid figure stands,  
’th leering eyes and shrunken hands:  
’pright he moves in mortal mould,  
isble as in days of old;  
nd smiles as he was wont to smile,  
et somewhat ghastlier than before:  
nd such a faithless look he wore.  
carless I leave his glance, and turn  
o where those glaring sockets burn;  
nd tell him—*he was false to me*,  
nd how I scorn his memory.

H.

## SONG.

Too like the faded wreath I wear,  
My hapless life has past away;  
And every wither’d blossom there,  
May well soon vanish’d joy pourtray.  
Like hope, this azure harebell hung,  
Supported by a stem as fine,  
On the bleak mountain’s wild brow sprung—  
But died upon this brow of mine.  
Ah! view this rose—its damask blossom,  
Like pleasure, lost its brilliant dyes;  
Some scatter’d petals strew’d my bosom,  
Whence every pleasing image flies.  
Each blending tint has faded now,  
Even the myrtle’s constant green;  
All but this dull dark cypress bough,  
Which had before unnoticed been.  
Thus with the fleeting bloom of joy  
Lore withers, to revive no more;  
And nought but rankling memory  
Twines freshly, changeless as before.

## COUNTRY COMMISSIONS.

*Vide "Mr. Matthews at Home."*

Dear Cousin, I write this in haste,  
To beg you will get for mamma,  
A pot of best Jasmine Paste,  
And a pair of Shoe-buckles for 'Pa,'  
At Exeter Change,—then just pop  
Into Aldersgate Street for the prints—  
And while you are there you can stop  
For a Skene of white Worsted at Flint's.

Fapa wants a new Razor Stop,  
And mama wants a Chinchelli Muff;  
Little Bobby's in want of a top,  
And my aunt wants six pen'orth of Snuff.  
Just call in St. Martin's le Grand  
For some Goggles for Mary (who squints),  
Get a pound of Bees-wax in the Strand,  
And the Skene of white Worsted at Flint's

And while you are there you may stop  
For some Souchong in Monument Yard;  
And while you are there you can pop  
Into Mary-bone Street for some lard;  
And while you are there, you can call  
For some silk of the latest new tints,  
At the Mercer's not far from Whitehall—  
And—remember the Worstest at Flint's.

And while you are there, 'twere as well  
If you'd call in Whitechapel, to see  
For the Needles; and then in Pall Mall,  
For some Lavender-water for me;  
And while you are there you can go  
To Wapping, to old Mr. Flint's—  
But all this you can easily do.  
When you get the white worsted at Flint's.

I send in this parcel from Bet,  
An old Spelling-book to be bound,  
A Cornelian Brooch to be set,  
And some Razors of Pa's to be ground.—  
O dear! what a memory have I—  
Notwithstanding all Debonair's hints,  
I've forgotten to tell you to buy  
A Skene of white Worsted at Flint's.

*Impromptu of a Gentleman of the name of Mills,  
on losing a Tooth.*

And must I then my dinner shun,  
When never Cook was kinder—  
For what are Forts without a Gun—  
What Mills without a Grinder!

QUIZ.

## SKETCHES OF SOCIETY.

## LETTERS FROM PARIS.—No. III.

Paris, Oct. 22d, 1820.

## THE FRENCH INSTITUTE.

An introduction recently took place at the French Academy. The Marquess de Pastoret was elected a member, in the room of the celebrated Count de Volney, and he accordingly delivered his admission speech. Voltaire, long ago, ridiculed these admission speeches, which were formerly all made up according to one pattern, and in which, now, as well as in the time of Voltaire, the new academicien declares with more or less spirit and elegance, that Cardinal de Richelieu, the founder of the academy, was a great man; that all the members of the establishment are great men; that the president in particular is a very great man; and that the new academicien may probably turn out to be a great man also. The main object of ambition, among the *litterati* of Paris, is to become members of the academy; and no sooner is the death of an old academicien made known, than ten young men are making every effort to succeed to his place. Those who are not fortunate enough to obtain the majority of votes, revenge themselves by writing epigrams.

The epitaph which Piron wrote for himself, is well known:

Ci git Piron, qui ne fut rien,  
Pas même academicien.

Following his example, M. Vigée, an agreeable poet, who had made many useless efforts to gain admission to the academy, wrote the following epitaph.

Ci git qui fit des vers, les fit mal, et ne put,  
Quoiqu'il fut sans esprit, être de l'Institut.

One of the academiciens, however, to prove that it was possible to be witty and yet to belong to the Institute, which includes the four academies, wrote the following quatrain in reply to M. Vigée's epitaph:

Vigée écrit qu'il est un sot;  
Peut-être qu'on le contredise?

Non: l'épithète est si précise.  
Que tout Paris le prend au mot.

The academy has undertaken to edit the great dictionary of the French language. It is now about 50 years since this dictionary was commenced, and I believe the first 6 letters of the alphabet are finished. Thus in about 200 or 250 years hence, we may see, at least, our great grand children may see, the completion of this ponderous work. The cause of all this lingering is, that the gentlemen engaged in preparing this dictionary enjoy a pension, which will cease whenever their labour is concluded; consequently, as long as the academiciens retain any taste for pensions, the dictionary will remain unfinished, and the public must contrive to dispense with it.

But to return to the Marquess de Pastoret: he is the eleventh peer who has been introduced to the academy; and it is to be feared, that that learned body will speedily resemble a Chamber of Peers, rather than a union of literary men. The Marquess de Pastoret, who is celebrated for his legislative knowledge, was previously a member of another academy. Since the revolution however, the four academies have been united together, and are distinguished by the name of the Institute; M. de Pastoret has therefore, been twice elected a member of the same body. But he is not the only person thus singularly situated; M. Cuvier and some others are also double academiciens. This ambition has already been a subject of ridicule; and the public seem to think it is rather too much to aspire to two seats in one learned institution, when many meritorious individuals cannot even get one.

It was an admirable idea of the French republic, to create a single learned establishment, embracing every branch of human knowledge. The Institute was divided into four classes; the first, including the physical and mathematical sciences, the second, the French language, the third, the moral and political sciences, and the fourth, the fine arts. The third class, in particular, was a truly noble design. No government had previously drawn the science of politics from the darkness of diplomatic cabinets, to cultivate and bring it to perfection by a particular class of learned men, and at the same time to connect it with morals, and all that contributes to social happiness. It is lamentable to reflect, that this plan could not be executed in its full extent; and it is still more to be regretted, that that useful and important class of the Institute does not still exist. Under the government of Bonaparte, politics were banished to the camp or the cabinet, or mentioned only in the notes of the *Mémorial*. Instead of the moral and political sciences, the third class of the Institute was directed to turn its attention to literature and ancient history; and it

still has the same destination, though it bears the old insignificant title of *Academy of Inscriptions and Belles-lettres*, conferred on it by Louis XIV., because it was especially charged to compose the pompous inscriptions which were lavished on all the monuments of his reign. What progress must human intellect have made between the reign of Louis XIV. and the establishment of the French Republic, when the *Academy of Inscriptions*, (where compliments were manufactured in Latin verse;) was converted into a philosophic depot for every branch of moral and political knowledge. The Academy of the Fine Arts, has also undergone some modifications, since it has dropped the title of the *Class of the Fine Arts*. It was the wish of the Republican government, that this class should combine representatives of all the imitative arts. Thus it included not only distinguished painters, sculptors, and engravers, but also musical composers, and actors. Some persons, however, suggested that it was not proper to admit actors among the members of the class, apparently because they did not honour the dramatic art with a place among the fine arts; and since that period, no actor has been chosen a member of the class. The academy has not publicly stated its reasons for this regulation; and it still remains to be explained, why a good tragic actor, who frequently creates more than the author himself, should not be styled an artist, as well as a painter or sculptor, who do no more than an actor; namely, copy nature or produce ideal nature. An actor has been compared to a practical musician, who merely plays an instrument without the merit of composing or inventing. This comparison, however, though it may be correct with respect to bad actors, is certainly unjust towards the higher professors of the histrionic art; and if the public have never been informed why the dramatic art is excluded from the *Academy of the Fine Arts*, it is probably because no satisfactory reason can be adduced for such a measure. In the French Academy, great pains have hitherto been taken, to preserve what is styled *classical taste* in poetry; the consequence is, that this classical taste has produced no poets. German literature on the one hand, and Lord Byron on the other, have introduced in France in a contraband way, a taste for the romantic; thus, all the partisans of our old literature exclaim that good taste, the taste for the age of Louis XIV. is visibly declining, and that there will be an end to the purity of poetical doctrine, if the encroachments of foreign taste be not speedily opposed. Lord Byron, in particular, has produced a kind of revolution here for a long period. No foreign poet has been so much read, translated, and imitated. Impartial persons know not what to think of this dispute about *classical* and *romantic taste*; and the French Academy, in order to preserve a clear conscience, has proposed as a subject for the prize of eloquence, to determine what constitutes poetic genius, and how it is to be recognized independently of diversity of languages and forms of versification, and in every different style, from the epopee to the apologue.

Whenever this question shall be resolved, we may hope that the dispute between the *classical* and the *romantic* will end, and that the latter will obtain the right of citizenship in France.

## MIDDLE LIFE.

To the Editor of the Literary Gazette.

Sir.—Though I profess to be only a respectable tradesman and an honest citizen, I hope you will not refuse to insert the following sketch of family grievances, that have occurred to me during the last month.

My wife and daughters take in your journal regularly; and as they think very highly of every thing it contains, I wish through your medium to make my sentiments known to them.

I came to London about fifteen years ago, with a wife and young family, having no other prospects than what I might hope from an unimpeached character and careful and industrious habits. I entered into trade, and since that time, through perseverance and constant exertion, have continued to prosper.

I owe my success too, in a great measure, to never having been above my business; to having been content to keep within my own sphere; not associating with those so much above me, as to interfere with my own sober habits, and keeping equally clear of those beneath me. In these sentiments, I have brought up my children; I have educated my daughters well, but plainly, in such a manner as rather to make them sensible wives than figurantes in a ball-room; and my boys I have brought up to industry.

To do my wife justice, I have always had her co-operation; and for upwards of twenty years, I never had occasion to repent of my wedding-day; being of too managing a disposition was always her only fault: thus I have long been as happy a father and husband as perhaps London affords. I am considered to be a good man on the Royal Exchange, and a good man by my friends in another sense of the word. My eldest daughter was to have been married at the beginning of the year, to a respectable young man who has long lived with me, and whom I intended, then, to take into partnership.

So things were situated, till about a month or six weeks ago, we received a formal announcement of the marriage of a country cousin of my wife, to a rich tradesman in St. James's-Street. After a family consultation, it was agreed that my wife and eldest girl should visit the bride and invite her to dinner. They accordingly went, though I must own, I did not much like the sound of St. James's Street; but I have always made a rule of never giving opposition to what did not appear unreasonable. The invitation was accepted, and from that hour I date my misfortunes.

My wife, who gave me a great account of her cousin's grandeur, said she was determined to entertain her genteely, and to shew her that she was not superior to her city relations. I said nothing, though this desire to vie touched me with rather painful forebodings.

At length, after the preparations being discussed till I was tired of hearing of them, the gala-day arrived; but a great omission had been made. My wife had forgot to mention the dinner hour; ours was usually two o'clock, and I proposed that it should not be altered; however, to be on the safe side, half past two was agreed on; long before which we had all assembled in the best parlour in our best attire, to receive the visitors in proper style. Three o'clock struck and they had not yet arrived. I insisted that my wife had mistaken the day, and she herself began to think so too; we waited another half-hour, but still no one came. Every face in the room but my own looked blank, for I was the only one present that did not feel disappointment. My wife lamented her fish, fowls, &c. and I endeavoured to comfort her by telling her how well we could enjoy her good things by ourselves, but all would not do. Waiting longer we all thought useless, so we soon sat down to an excellent dinner, which I was very well disposed to relish. I complimented my wife on her good dishes, and she shortly began to brighten up. When the cloth was removed I took one of my little ones on each knee, to partake of the grand desert; I congratulated myself on seeing my family so comfortably about me, and I filled a bumper to my wife's health, telling her how much of my happiness I owed to her. This compliment quite restored her equanimity, and she had just filled one in return, when we heard a thundering knock at the door; the glass dropped from her hand and was smashed in pieces. We stared at each other, every one exclaiming, what shall be done? Why, what should be done my dear, said I, but to tell the truth? Oh, not for the world! said my wife; as you value me, do not say a word. After such a solemn appeal, I was of course silent. We had scarcely time to make a rush into the best parlour while the visitors were coming up stairs. My daughters, who had not much occasion for rouge, were endeavouring to compose their scattered ringlets, when the bride and her sister entered the room, attired in the very height of the fashion, with flowers and silks and satins, that formed a complete contrast to my wife and daughters' comparatively plain but neat appearance. They were followed by two of the most complete dandies I ever beheld, who were introduced to me as Mr. Fleming and his partner.

The first compliments being over, the bride said she was afraid that they had come too soon; "but," she continued, "as I knew that you citizens are often early people, I was determined to err on the right side, so I insisted on Mr. Fleming getting ready to be here against four, though he said, it was the first time in his life that he had ever gone out to dinner before six." I anxiously waited for my wife's reply, who, as I feared, would not be outdone in gentility. She entreated Mrs. Fleming not to be uneasy, but to consider herself as a relation and not as a stranger; and said, she had no doubt that we should have plenty of interesting conversation to occupy the time.

hours before dinner, which she was sorry would not be ready till past six. Before Mrs. Fleming had time to reply, one of the little girls about five years old, who had overheard what was passing, ran up exclaiming, "Shall we have another dinner, mother?" Her mother reddened, but quickly turned to Mrs. Fleming, saying, "We always make the children dine early you know." "Sure you and my father and we all dined early; and to day we had such nice fruit, because the company did not come." What was to be done? My elder girls looked at each other and then at their mother. They endeavoured to coax the child and turn her attention; but she, accustomed to tell the truth, went on. "May I have some of the other dinner?" "My dear," said my wife to me, "ring the bell for the servant to take the child to the nursery, for it is almost her tea time." "Sure mother, we have no nursery," she replied, "and arn't we to have another dinner before tea?"—worse and worse. I do not know how it would have ended, had not the servant come and taken the poor child away by force, who begged to the last to have some of the other dinner.

It was some time before we all regained our self possession. I perceived by the countenances of the strangers, that they saw through our ridiculous manoeuvres, and would laugh at us behind our backs. So much, thought I, for fashionable visitors.

My wife presently quitted the room to make preparations for dinner; but Mrs. Fleming soon broke the dead pause that ensued, by asking my son and daughters what places of amusement they frequented most. My daughters blushed, not knowing what to say; but she scarcely gave them time to reply, before she went on most volubly. "We go much oftener to the Opera than any where else, because Mr. Fleming has such a fine ear; for my own part, I prefer the drama; but Mr. Fleming does not think Corent Gardeu worth going to since Miss O'Neil left, and he thinks nothing of any other theatre." She then went through all the other places of amusement in rotation; and I was proud, and my son and daughters were ashamed, of scarcely having been at one of them. "Well, 'tis a strange thing to have always lived in London and never to have seen London. But I suppose it is because you reside in the city, so far from every thing of the kind. Mr. Fleming says, that he could not exist without amusement; and really, we feel quite full of the *vapeurs noirs*, as the French say, if we stay at home a whole evening."

Thus she talked on for near an hour, making me heartily sick of her and her fashion, and my poor daughters heartily vexed at being citizens. As for the gentlemen, they never condescended to say more than—"sure"—"indeed"—"very true," &c.

At length my wife returned to the parlour, and at about half-past six dinner was announced. I certainly felt some curiosity to see the dishes uncovered; but what was my astonishment, instead of the good substantial dinner we had left, and which I expected to

have seen re-heated, to behold a parcel of finikin dishes, of not one of which did I know the name; and my poor wife, who, when she sat down, looked the picture of confusion, I perceived to be in the same predicament. As well could she have repeated the Greek alphabet, as the names of the messes on her own table. Hence the most terrible piece of work arose about this dish and that dish, and the dish at the side, and the dish in the middle, and the dish at the corner, for the table was so crowded that it was scarcely possible to distinguish which dish was asked for. Though our visitors put a bold face on it, I believe they were as ignorant as ourselves on the subject. My son, who is a lad of some humour, got out of the scrape very well, by calling the dishes by various French names that came into his head.

At length dinner was blundered through, and the rest of the evening went off tolerably. The company remained till twelve o'clock; but my wife, afraid of being vulgar, did not mention supper, and at length they went away without being offered any refreshment at all. At parting, Mrs. Fleming returned the invitation for that day fortnight, which to my mortification was accepted without my ever being consulted.

When they were gone—"Well my dears," said I, to my wife and daughters, "I think we have seen enough of west-end company." "I am quite of another opinion," replied my wife; "Mrs. Fleming is certainly a very genteel woman, and my girls say learn a great deal of polish from her, which they want." My daughters agreed with their mother in eulogizing the bride and her sister, and it was vain for me to argue against them. I thought it best to let them have their own way, trusting that good sense would soon resume its sway.

The next morning at breakfast, a bill for ten pounds came from the pastry-cook's (a genteel dinner for nine having been sent in according to my wife's order); I showed it to her without making a single observation. She was heartily ashamed of it, and said such a thing should never occur again. I let this pass by, in the hope that it would have the effect of making her yield to me in return. But alas! even in the course of this day, I found my influence to be on the decline. Dinner, without my knowledge, was put off till four; I remonstrated, but in vain; too many voices were against me.

My daughters now occupied themselves from morning till night in making preparations for their intended visit. They had not a single gown fit to appear in; I was of course called upon for money, which I gave unwillingly for the first time in my life.

At length the day arrived, and we all set out in a glass coach; we were punctual to the hour (six), but Mrs. Fleming and her sister did not appear till near seven. At tea there was a large party; and such absurdity and pretension I never before witnessed. But to cut my story short, since that time, the reign of my family comfort has been completely over. My wife and daughters have continued to inter-vist with Mrs. Fleming, whom they endeavour to imitate in every

thing; not only my hours, but my very meals are changed. In place of my snug tea and muffins at five o'clock, I am put off with biscuits and small slices of thin bread and butter at seven; and instead of a comfortable hot supper at nine, I am obliged to eat delicate sandwiches at eleven; even porter, the only drink that I relish, is excluded; so that I, whose boast it was that I never spent a night out of my own house, shall, if things go on at this rate, be forced to go to a coffee-house to get a comfortable meal. But to crown all, my eldest daughter has begun to look cold on her intended husband; for Mr. Fleming's partner has paid her attention, and I would almost as lieve follow her to her grave, as see her married to such a coxcomb. Her poor lover is getting quite low-spirited and unfit for business; he continually makes blunders in the accounts. In fact, I am on the road to ruin.

A CITIZEN.

## THE DRAMA.

DRURY-LANE.—King Lear was played on Wednesday, and the principal character melodramatized by Mr. Booth. Mr. Cooper performed Edgar, a character which tells on the stage, but which affords no scope for the exercise of either superior talent or sound judgment. It differed little from other personations which we have seen, and was decidedly inferior to the Poor Tom of Charles Kemble. Midas was the afterpiece, got up in good style, Madame Vestris, sticking to the male parts, being the Apollo, Miss Smithson a handsome Venus, Munden, most ludicrous Midas, and Harley rather a whimsical Pan.

COVENT GARDEN.—Wallace.—The tragedy announced in our last was performed on Tuesday, and succeeded. The production of a mere boy (speaking with reference to the age of literary adolescence), and of a very young gentleman even in the common count of life, we cannot help considering this as a very signal example of early dramatic genius. We accordingly feel strongly prompted to be lavish in our praise; but the simple fact of a tragedy, capable of delighting thousands of all ranks, being written by an author in his teens, is a volume of eulogy; and we shall better discharge our duty to the public and to this promising individual, by describing simply its merits and its defects: the former will excite just applause; the latter may be of some use in the way of hints for the future, which precocious talent requires perhaps more than any other description of mental endowment.

The difficulty of constructing a sterling play is much augmented by the choice of a historical subject, in which personages famed in the annals of nations are brought as characters upon the stage. The more renowned they have been, the more generally have men formed in their imaginations a picture of them; and whenever a writer or actor fails to coincide with this beau ideal of the fancy, the critic sets it down as a departure from truth and reality, without entertaining the question of which is the true conception.

In this respect the hero Wallace presents an object pre-eminently challenging the utmost skill of the dramatist. In legendary tale, in the scroll of warlike achievements, in the highest romance of enterprising valor, in the noblest records of patriotism, and in the deepest wrongs of human fate, he has been handed down to posterity in colours which no art can surpass: no invention can exceed the wonders of his adventures; no poetic report can outstrip the bravery of his exploits; no descriptive powers can add grace to the gallantry of his bearing; no feeling homage can exalt his devotion to his country, and no pathos can increase the shame and horror of his death. Such a theme it was perilous for a young pen to approach; but Mr. Walker was fortunate in having the Wallace of history softened down to his muse by the altering hand of fiction. He has taken the principal materials of his tragedy from *Miss Jane Porter's* very interesting novel of *The Scottish Chiefs*. Here we had the same characters drawn, most of the incidents, and even some of the language. Indeed the only variation of moment which we can recollect, is his giving the hero a wife in secret (the idea of which, by the way, is anticipated in the *Agnes of Miss Holford's* sweet poem, *Wallace, or the Fight of Falkirk*), instead of his dead love Marion, and the Helen, who is united to him on the eve of his execution, in Miss Porter's novel; and making her beloved by his friend Douglas and his foe Monteith. Upon these data, Mr. W. has exerted himself with much effect. He has composed several fine poetical passages; he has conducted the plot regularly; he has contrived a number of excellent dramatic situations; and, commencing with the end of the third act, he has wrought up the catastrophe with extraordinary ability.

The play begins with Edward's offers to the Scotch, and their rejection by Wallace. The dissensions among the Scottish leaders are then exposed. Wallace entrusts the secret of his marriage to the base Monteith, who himself aims at a union with Helen, and who, to accomplish his object, leads Douglas, to whom she had been betrothed, to witness her affectionate parting interview with Wallace, on the eve of his going to battle with the English. This plot however fails; for the brave and noble Douglas is convinced of the integrity of his friend, and sacrifices his own passion on the altar of his country. The Scotch, owing to the treachery of some of their leaders, are defeated, and Wallace, with a few valiant followers, compelled to fly. Monteith is foiled by Douglas in an attempt to carry off Helen; but at last succeeds in betraying Wallace to the enemy. The villain is however slain by Douglas in the very consummation of his wicked design: but the unfortunate captive is taken to London, and doomed to an ignominious death. Helen and Douglas follow him; the former supplicates the king for his pardon, which is granted, on condition that he renounces his country's cause, and swears allegiance to Edward. The distracted wife brings these terms as her lord is hurrying to the scaffold. To her he leaves the determination if he

shall die unstained, or live dishonoured; and after a dreadful struggle she tears and tramples on the insidious offer. Wallace is then led off the stage for execution; she starts from a swoon, reels to the side, and witnesses the last stroke, which also breaks her heart. The curtain falls.

Such is the outline of this tragedy; whence it will be seen that Helen is the Helen Mar of Miss Porter; and in rejecting the proffered mercy, she does precisely what the Earl of Gloucester is made to do in the novel. Douglas is a compound of the novellist's Bothwell in the beginning, and her Sir Edward Bruce in the end. The scene of quarrel among the Chiefs, is drawn from the same source, and the resemblance is throughout unmarked and particular. Even the language, as we have observed, is frequently copied; thus for instance, in the novel, Helen exclaims, (vol. v. p. 224,) "And is there no hope? Ah, conduct me to this lawless king! If tears, if a breaking heart can avail, I will kneel before him; I will die before him, only let Sir William Wallace live!"—which, we think, are almost the precise words Mrs. Bunn, the Helen of the play, utters under the same circumstances. In those parts which we presume are more distinctly attributable to Mr. Walker, there is an unaffected simplicity which merits warm approbation; for turgidity and bombast are almost the inseparable concomitants of youthful composition. He nowhere offends; he has had the magnanimity to despise claps, the sound judgment to avoid unwieldy sentiment, and the discrimination to consult natural incident in marching on to his conclusion. Were he a more mature candidate for the palm, we might condemn him in two or three points; but we will only commune with him as friendly advisers. In our opinion, he would have done better to maintain a little more of the firmness, if not sternness, of Wallace: Wallace ought to shed no tear. Commoner warriors of that age would have been ashamed of such weakness. Again, the effect of irony in his address to his associate leaders, is fine; but it is improper, and loses its effect when repeated to the soldiers flying from battle. Monteith appears to us to be too refined, and too refining a traitor. These were rude and barbarous times; brute force, and not nice manoeuvre, was the weapon to destroy a rival; and even perfidy, when resorted to, was of a rough and rugged cast. Centuries after the time of Wallace, all the machiavellism of all the nobles in Scotland would not have furnished so perfect and complete a designer as Monteith is here delineated. But we will not dwell on these slight specks on a performance which is so honourable to its author. We will not even have the show of finding fault, under the name of advice, where we truly think so remarkable a specimen of early genius is entitled to every species of encouragement from a liberal and a discerning public. With this we will hope to see the sapling a splendid tree; and are happy to have it in our power, by giving a specimen of his composition, to show on what grounds that hope is planted.

#### Act IV.—Scene I.

*A wild and romantic glen. Night, with the murmur of an approaching storm. Wallace discovered bareheaded, reclining against a rock.*

Wal. It will not be—Slumber, thou art leagued

With an ungrateful country to forsake me! Then, welcome storm and darkness! *Travelling*

*Here, nobles!*  
In this drear desert I should dwell alone,  
And, with the Spirit of these mountains, share  
His independence! Here, amid these wilds,  
Whose earliest habitants, yon lusty clans,  
High lift their bold heads to the liberal breeze,  
And mock the tyrant blast!—'tis well; the storm  
Drives on apace.—How lowers yon lightning  
sky!

The very nightbird, with instinctive dread,  
Scared by his ominous aspect, quits her prey,  
And with shrill note outstrips the hurrying raven  
To shriek her 'gainst the tumult—with this  
awe

The wild wolf seeks the covert of his cave!  
Above—around—below—all nature shrinks  
Appall'd—save Wallace!—be alone, with me!  
That mingle in the tempest—woon its rage!

*[Thunder heard.]*  
Aye—roll, ye thunders, roll—terrible  
lightnings,

Flash your forked fires around me—here! 'tis  
all,

And deem your horrors heaven, to that we  
belong!

Of ease—enjoy'd but at a tyrant's will!

Wal. ————— Mark me!  
Thou say'st 'these rocks are desolate'—'tis true,  
And dost thou wonder that a kindred phantom  
Has still its charm?

Mont. ————— This is no answer.  
Wal. ————— No!

Then I will speak thee plainer: this wide circling  
Where solitude hath girt her with a zone  
Of rock on rock—these crags, whose jagged  
spires

High tower to heaven—these rushing currents,  
Majestic monuments of untam'd nature,  
Are free—all free—even as the soul of Wales!  
They hold their rights, not at a despot's will,  
But by primeval charter—unpross'd &  
Since the world was—the air that flows in  
them

Has ne'er been tainted by the breath of slavery—  
The earth that holds them,  
Has ne'er been blasted by the tyrant's tread!  
'Tis here alone, dwells liberty!—and here,  
Would I, apart from man, contemplate her:  
Now, art thou answer'd!

We have left ourselves little room to speak  
of the performers. Macready was admirable  
in *The Wallace*. His stupor on discovering  
the baseness of Monteith, was almost  
the best thing we ever witnessed on the  
stage. His farewell to his native haunts was  
also exquisitely given; and all his final  
scenes towering above each other in dignity  
and pathos. The whole character raised  
him still one step higher in the estimation  
of an approving public. Mrs. Bunn also  
imparted much effect to Helen. Her voice  
is not tuneless, but her person is imposing,  
and her tragic powers great. The commanding  
figure of Mr. C. Kemble was displayed  
to much advantage in the noble Douglas.

nor was his acting less graceful than his form. Alternate boldness, manly feeling, grief, and despair, were pourtrayed with a beauty and accuracy, which left nothing to be wished. Mr. Abbott too deserved the meed of praise, for the ability with which he sustained an uneasy and disagreeable part. The value of such a performer can only be ascertained by beholding inferior talent in such characters as those which he so often renders respectable and effective. The minor Thanes were tolerable, and (to end this sad eventful history) Miss Foote, looking most bewitchingly pretty, spoke a smart epilogue very cleverly.

### VARIETIES.

A few days ago, a woodman, engaged in splitting timber for rail-roads, in the woods close by the lake at Haiste, a seat of Mr. Pringle's, in Selkirkshire, discovered in the centre of a large wild cherry tree, a living bat, of a bright scarlet colour, which, through fear, he foolishly suffered to escape, being fully persuaded (with the characteristic superstition of the inhabitants of that part of the country) that it was a "being not of this world." The tree presents a small cavity in the centre, where the bat was inclosed, but is perfectly sound and solid on each side.—*Caledonian Mercury.*

It is whimsical to read the descriptions which the foreign journals give, not only of our proceedings but of our persons; the following is one of their portraits:

Mr. Brougham, attorney-general to the Queen of England:—This acute, learned, and eloquent advocate, who may perhaps in a few years become Lord Chancellor, is a mean looking figure, as lean as a broomstick, yellow, and fallen away, with a flat nose, a wide mouth, and unpleasant contours; but he has large sparkling eyes which flash fire, and as soon as he begins to speak his countenance is lighted up with a degree of animation, understanding, and self-possession, the effect of which is not weakened by a bad habit (perhaps a nervous affection) of every moment stretching the nostrils, distorting the closed mouth on both sides, and at the same time winking with the eyes. The charm of his eloquence is irresistible to an unprejudiced person, and there is in his manner something which the English call *gentlemanlike*, by which he is very favourably distinguished from the violent fury of his colleague Mr. Denman, the Queen's solicitor-general, who with a terrible bass voice roars in the hall, at the same time thumping on the bar.

Mr. Isaac Jacob, of Waterford, received a letter a short time ago, in the superscription of which the writer had the singular ingenuity to avoid putting a single letter of his correspondent's name, by directing to Eyzek Gekup. This was clever *cacography*.—[*A fact.*]

*Irish Counties.*—During the rebellion of 1798, Ireland was subject to the severe discipline of military law, and sentries were placed in every important situation, with the strictest orders not to let any person pass after

nine o'clock at night without a knowledge of the proper pass-word. The Comte de Clermont, a French emigrant residing in Dublin, had unluckily staid out one night beyond the prescribed hour, and on endeavouring to get into the castle, where he slept, was stopped of course by the sentry, who was inexorable. "Oh, sars," said the angry Frenchman, "you must let me in; je suis—I am the Comte de Clermont." "A county Clare man!" replied the soldier—devil a bit of me would care if you were a county Kerry man, or even come out of the heart of Tipperary like myself: clear my post," continued he, repelling the count, "or you will never see the county of Clare in your days again."

*County of the Chimera.*—A student, from the south of Ireland, in the university of Dublin, who was unfortunately, at the same time, so idle as to stand in need of continual prompting at examinations, and so deaf as to be almost incapable of benefiting by it, was once asked by his examiner, "What was the Chimera?" He instantly cocked his ear to catch a whisper from his neighbour, who, vexed at seeing him so ignorant, said, rather impatiently, "Why, 'tis a monster, man!" The deaf scholar taking the prompt imperfectly, cried out with the utmost confidence, "The chimera, sir, why sure every body knows he is a Munster Man!"

H. Harvey, of Wickham Skeith, Suffolk, states, through the *Gentleman's Magazine*, that he has prepared a model for direction-posts, with painted letters, giving light in such a manner as to be legible in the night time, and retaining that property for several years. This is certainly a humane and useful invention; and it is to be regretted in this respect that the immense aggregate of human inconvenience, disappointment, and suffering, occasioned by the neglect of the most simple expedients, is suffered to exist in a country like England. If we could take into one view all the evils of a single year from the want of direction posts generally, and of the common precaution of having the names of places on the road inscribed conspicuously upon some of the houses, it would lead, we think, to the universal adoption of both practices, and conduce more materially than may at first be supposed to the public comfort and benefit.

*Preservation of eggs.*—The Edinburgh Philosophical Journal recommends the following method for the preservation of eggs, either for zoological or economical purposes:—Varnish them with gum arabic, and then imbued them in powdered charcoal. The gum arabic is preferable to varnish, because it is readily removed by washing in water; and the charcoal is essential for maintaining a uniformity of temperature round the eggs, in transporting them through different climates.

### LITERARY NOTICES.

GERMAN LITERATURE.—DE BARROS'S *Asia*.—M. D. W. Soltaize, of Luneburg, in the kingdom of Hanover, (who has enriched German literature with many excellent trans-

lations from various languages,) has just announced for publication, an abridgement of the important work, "*Asia*, by Soao de Barros," in the German language, under the title of "History of the Discoveries and Conquests of the Portuguese in the East, from the year 1415 to 1639," in five vols. 8vo. The learned translator has the whole work ready in MS.; but has probably been induced by the fear of not meeting with sufficient encouragement, to publish only a part of it.

### METEOROLOGICAL JOURNAL.

NOVEMBER 1820.

Thursday, 9.—Thermometer from 43 to 49. Barometer from 30, 10 to 30, 12. Wind N. E. 1, and 3.—Generally cloudy; sunshine at times.  
Friday, 10.—Thermometer from 40 to 49. Barometer from 30, 16 to 30, 20. Wind N. E. 2, and 3.—Generally cloudy.  
Saturday, 11.—Thermometer from 40 to 46. Wind N. E. 3.—Clouds passing; clear at times.  
Sunday, 12.—Thermometer from 34 to 41. Barometer from 30, 32 to 29, 37. Wind W. b. N. 4, and S. W. 2.—Generally cloudy; rain in the evening.  
Monday, 13.—Thermometer from 35 to 38. Barometer from 29, 71 to 29, 85. Wind N. E. 2.—Generally cloudy, with a misting rain.  
Rain fallen .125 of an inch.  
Tuesday, 14.—Thermometer from 31 to 38. Barometer from 29, 92 to 29, 95. Wind N. E. 2, and 3.—Generally cloudy, with rain at times. A little snow \* for about 10 minutes, at noon.  
Rain fallen .15 of an inch.  
Wednesday, 15.—Thermometer from 31 to 43. Barometer from 30, 67 to 30, 11. Wind N. E. and N. b. E. 2.—Generally clear; clouds passing at times.  
Rain fallen .075 of an inch.  
On Friday the 24th, at 59 minutes, 17 seconds after 7 o'clock, (clock time) the first Satellite of Jupiter will emerge from an eclipse. Edmonton, Middlesex. JOHN ADAMS.

\* The first snow this season.

### TO CORRESPONDENTS.

WINE AND WALNUTS omitted for one week in order to verify some data, respecting which the memory of the ancient author was not absolutely precise. An anachronism touching Hogarth thus escaped him in an early chapter, and even thus in his last, the worthy old gentleman wrote "Seven Champions of England," instead of "Seven Champions of Christendom!" We had not space this week for J. G. on the Lottery; nor are we quite clear that, though humourously treated, the subject falls within our plan. W. M.'s letter is obliging. We hope no jesting of our's will deter him from writing to us, nor keep even one indifferent poet from taking the chance of our opinion for an appearance in print. We feel sincerely, that many poor beginnings have grown to a rich harvest; and are disposed to not on this connection.

Errata.—In our last No. Critique on Othello, l. 6, for best scenes, read best scenes. On Twelfth Night, l. 13 from the end, for *Autrey*, read *Autrey*.

## BOOKS PUBLISHED THIS DAY.

*Anecdotes of the Royal Family.*

The 2d edition, in post 8vo. price 6s. 6d.

**LETTERS from Mrs. DELANY** (Widow of Doctor Patrick Delany) to Mrs. FRANCES HAMILTON, from the year 1779, to the year 1789; comprising many unpublished and interesting Anecdotes of their late Majesties, and the Royal Family. Now first printed from the Original Manuscripts.

"Little circumstances show the real Men, better than things of greater moment."—*Addison.*

Printed for Longman, Hurst, Rees, Orme, and Brown, London.

*Life of Kutsober.*

By BOOZEY and Sons, 4, Broad Street, Exchange. **THE LIFE of AUGUSTUS VON KOTZEBU**, translated from the German; containing his Anecdotes illustrative of his Character, the influence of his Writings upon Society in Germany, and its consequences. 12mo. 12s. 6d.

†† The merit of this work is that Kutsober is his own biographer, as his very words are often brought forward to substantiate the opinions that are advanced. The whole tenor of his life, and its melancholy end, render a faithful account of him interesting, especially under the advantages just mentioned.—*European Mag. New Monthly Mag.* &c. &c.

*Mr. Milia's Crusades.* New Edition.

2d edition, in 2 vols. 8vo. 12s. price 12. 6d.

**THE HISTORY of the CRUSADES**, for the Recovery and Possession of the HOLY LAND. By CHARLES MILLA, Esq. author of "A History of Mohammedanism." Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"A History of the Crusades was a great desideratum in English Literature. Mr. Milia's production, for intelligence, compression, arrangement, and clearness, approaches very nearly to what we consider the requisites of perfection in this species of composition."

*Literary Gazette*, No. 164."His (Mr. Milia's) lucid and valuable history."—*Edinburgh Review*, No. 37.*Baileus on the German Language.*

Published by BOOZEY and Sons, Broad Street, Exchange. **THE NATURE and GENIUS of the GERMAN LANGUAGE**, displayed in a more extended Review of its Grammatical Forms than it is to be found in any Grammar extant; and elucidated by Quotations from the best Writers. By D. BAILEAU. 8vo. price 12s.

"The Title-page so fully expresses the nature of Mr. Baileau's work, that we have little to say but that it keeps the word of promise. The Philosophy of the German tongue is treated in a clear and agreeable manner, and the extracts are selected with judgment in regard to practical utility and illustration."—*Literary Gazette*, August.

In 4to. price 12. 1s. boards.

**A SUPPLEMENT to Dr. JOHNSON'S DICTIONARY of the ENGLISH LANGUAGE**, adapted both to the common editions, and to that of the Rev. J. Todd. By the Rev. JOHN STAGGER, B. A. London: Printed for Rodwell and Martin, New Bond Street.

Price 5s. boards.

**AMUSEMENTS of CLERGYMEN.** By Bishop STILLINGFLEET. A new edition. Sold by Sherwood and Co. Simpkin and Co. London; and all other booksellers.

Price 16s. in folio, No. 1. of

**COSTUME of PERSIA**, Drawn from Nature. By A. ORLOWSKI. Containing 6 Plates, beautifully coloured and engraved on stone. London: Printed for Rodwell and Martin, New Bond Street. Of whom may be had, gratis, a Catalogue of various lithographic Works.

In post 8vo. price 12s. boards. the second edition of **LETTERS**, written for the POST, and not for the PRESS. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

*History and Biography.*

Historical and Biographical Works, recently published by Longman, Hurst, Rees, Orme, and Brown, London.

1.

**THE HISTORY of the REIGN of GEORGE THE THIRD.** To which is prefixed a View of the progressive Improvement of England in Prosperity and Strength, to the Accession of his Majesty. By ROBERT BISSSET, LL.D. author of the Life of Burke, &c. &c. Completed to the Death of the King. In 6 volumes 8vo. A new edition, price 32. 2s. boards.

**THE HISTORY of the REBELLION in 1745 and 1746**, containing the Causes of the Pretenders Defeat at Culloden, and a variety of interesting Anecdotes hitherto unknown. By Chevalier Johnstone, Aide-de-Camp to Prince Edward Charles Stewart, and Lord George Murray. With an Account of his subsequent Adventures in Scotland, England, Holland, France, Russia, and America. The Manuscript of Chevalier Johnstone was originally deposited in the Scots College at Paris. 1 vol 4to. with Portraits.

**3. MEMOIRS of JOHN DUKE of MARIBOROUGH;** with his Original Correspondence, collected from the Family Records at Blenheim, and other authentic Sources. By W. COXE, M. A. F. R. S. F. R. S. Archdeacon of Wilts. 2d edition, 6 vols. 8vo. with an Atlas, in 4to. price 32. 2s. boards.

Also, by the same author,

**HISTORY of the HOUSE of AUSTRIA**, from the Foundation of the Monarchy, by Rudolph of Hapsburg, to the Death of Leopold the Second, 1218 to 1792. A new edit. 5 vols. 8vo. price 32. 10s. 6d. boards.

**MEMOIRS of the KINGS of SPAIN** of the HOUSE of BOURBON, from the Accession of Philip the Fifth to the Death of Charles the Third, 1700-1789, from original Documents and Secret Papers. The 2d edition. In 5 vols. 8vo. 32. 1s. boards. Or in imperial 4to. 122. 12s. boards.

**MEMOIRS of the LIFE and ADMINISTRATION of SIR ROBERT WALPOLE**, Earl of Orford, with original Correspondence and authentic Papers never before published. A new edition, in 4 vols. 8vo. 22. 8s.

**LIFE of HORATIO, LORD WALPOLE**, selected from his Correspondence and Papers, and connected with the History of the Times from 1678 to 1787. 2 vols. 8vo. the third edition, 12. 6s. boards.

**4. THE LIFE of WESLEY**, and the Rise and Progress of Methodism. By Robert Southey, Esq. 2d edit. 2 vols. 8vo. with portraits, 12. 8s. boards.

By the same author,

**THE HISTORY of BRAZIL**, including a History of the Jesuits in Paraguay, and their other Establishments in the heart of South America. 3 vols. 4to. with a map, 72. 15s. boards.—Vol 3 may be had separately, price 32. 2s. boards.

**5. MEMOIRS of the PROTECTOR, OLIVER CROMWELL**, and his Sons, RICHARD and HENRY. Illustrated by Original Letters and other Family Papers. By OLIVER CROMWELL, Esq. a Descendant of the Family. With 6 portraits from original Pictures. 1 vol. 8vo. price 22. 8s.

**6. THE HISTORY of the CRUSADES** for the Recovery and Possession of the Holy Land. By Charles Milia, Esq. author of "A History of Mohammedanism." 2d edit. 2 vols. 8vo. price 12. 6s. boards.

**7. MEMOIRS of the LIFE of NICHOLAS POUSSIN**, By Maria Graham, Esq.

**8. THE HISTORY of GREENLAND**, including an Account of the Mission carried on by the United Brethren in that country, with a Comparison to the present Time, illustrative Notes, and an Appendix, containing a sketch of the Mission of the Brethren in Labrador. A new edition, illustrated by Plates, and considerable Additions and Improvements. 2 vols. 8vo. price 12. 1s. boards.

## REVIEW OF NEW BOOKS.

**MEMOIRS OF THE REBELLION IN 1745 AND 1746.** *By the Chevalier de Johnstone, Aid-de-Camp to Lord George Murray, General of the Rebel Army, Assistant Aid-de-Camp to Prince Charles Edward, &c. &c. Translated from a French MS. originally deposited in the Scots College at Paris, and now in the hands of the Publishers.* London, 1820. 4to. pp. 348.

What general remarks we may wish to offer on this volume, shall be reserved till the conclusion of our critique, (which we purpose to finish next week) and we shall content ourselves in the first instance with simply introducing it to the acquaintance of our readers, while yet steaming from the press. A narrative of the progress of the Rebellion by an eye-witness actively engaged in it, could hardly fail to produce much interesting matter : and accordingly we find here not only a good account of the principal affairs which took place during the eventful period from the Prince's landing to the battle of Culloden, but also some new traits of the leading persons engaged in them, and some characteristic anecdotes not previously known. The adventures of the author are also related in a genuine sort of style, which renders that portion of the book amusing, which can hardly otherwise be thought worthy of Quarto dignity. But as we have promised our observations as a finale, and foresee that some of them will be in the shape of censure, we shall now take up the more agreeable task of description and extract.

Among some rather questionable discussions in a political and historical introduction, the Editor tells us that—

"The Chevalier de Johnstone, the author, was the only son of James Johnstone, merchant in Edinburgh. This family, by descent and alliance, were connected with some of the first houses in Scotland. His sister Cecilia was married to a son of Lord Rollo, who succeeded to the estate and title in 1765. The Chevalier Johnstone appears in his youth to have moved in the best society which the Scottish capital then contained, and to have been on the most intimate footing with the well-known Lady Jane Doug-

las, mother of the present Lord Douglas, who uniformly treated him with all the tenderness and regard of a parent. Educated in episcopalian and jacobite principles, on the first intelligence of the landing of Prince Charles Edward, he made his escape from Edinburgh to Duncrub, the seat of Lord Rollo, near Perth, where he waited the arrival of the prince in that town, and was one of the first low-country gentlemen who flocked to his standard. By the Misses Rollo, his relations, he was introduced to the Duke of Perth and Lord George Murray, the leaders of the rebel army, the latter of whom invited him to become his aid-de-camp, an invitation which he accepted. He acted for a considerable period in that capacity, and also as assistant aid-de-camp to the Prince himself. From the Prince he received a captain's commission, immediately after the battle of Preston-pans, and worn out with the incessant hardships of his situation of aid-de-camp, that hardly left him one hour in the four and twenty for repose, he immediately began to raise a company, with which, when completed, he joined the Duke of Perth's regiment. He bore a part in all the movements of the rebel army, and after the battle of Culloden, remained for some time in concealment in different places in the north, and then proceeded in disguise to Edinburgh, where he again remained for some time concealed in the house of Lady Jane Douglas at Drumshugh. He made his escape from Scotland to England, in the disguise of a Scots pedlar, and after remaining some time in London, he embarked with Lady Jane Douglas at Harwich, for Holland. It was his intention, on first reaching the continent, to proceed to Russia, where by means of two uncles, Generals Hewit and Douglas, who possessed great influence in that country, he could have established himself to advantage ; but he allowed himself to be persuaded to go to Paris, where he was buoyed up for some years with hopes of another expedition to Scotland. He obtained a share in the fund set apart by the government for Scots exiles, but, tired of an inactive life, he entered the French service, and was sent to the French possessions in North America, from which he returned to France on the conquest of these possessions by the English."

The memoirs appear, from circumstances alluded to in them, such as a recent financial measure of the Abbé Terray, to have been written shortly after the return of the author to France. From the interval which had elapsed between the Rebellion and their composition, and his absence from his native country, the author has occasionally fallen into unavoidable inaccuracy with respect to minor matters. But his impressions,

with respect to all the great transactions of the Rebellion are clear and strong ; and on many of them, such as the retreat from Derby, the meeting of the vanquished Highlanders at Ruthven, and the desertion of Prince Charles, he throws a valuable light. From the confidential situation he filled, he had good opportunities of knowing the characters of the leading personages in the Rebellion ; and his portraits bear every mark of penetration, candour, and impartiality. The future historian of this period cannot, with a due regard to truth, portray Prince Charles Edward, Lord George Murray, or the Duke of Perth, as they actually were, without availing himself of the assistance of our author. His account, too, of the French service, in the reign of Louis XV., towards the conclusion of the work, is by no means the least valuable part of it."

Such is the character drawn of the author and of his work by his Editor, who seems to have so rooted a dislike to Jacobites, cavaliers, and Tories, that it may be presumed even his literary paternity would not bias him on this occasion. But we will let the Chevalier speak for himself ; and our first specimen is from an interesting account of the battle of Falkirk, which differs in some particulars from that of Home's history.\*

"General Hawley drew up his army in order of battle, in two lines, having three regiments of infantry in a hollow at the foot of the hill. His cavalry was placed before his infantry, on the left wing of the first line. The English began the attack, with a body of about eleven hundred cavalry, who advanced very slowly against the right of our army, and did not halt till they were within twenty paces of our first line, to induce us to fire. The Highlanders, who had been particularly enjoined not to fire till the army was within musket-length of them, the moment the cavalry halted discharged their muskets, and killed about eighty men, each of them having aimed at a rider. The commander of this body of cavalry, who had advanced some paces before his men, was of the number. The cavalry closing their ranks, which were opened by our discharge, put spurs to their horses and rushed upon the Highlanders at a hard trot, breaking their ranks, throwing down every thing before them, and trampling the Highlanders under the feet of their horses. The most singular and extraordinary combat immediately followed. The Highlanders, stretched on the ground, thrust their dirks into the bellies of

\* The Editor mentions a remarkable fact connected with this history, viz. that Home regularly sent the proof sheets of his work to be corrected by a member of the Royal Family in London.

the horses. Some seized the riders by their clothes, dragged them down, and stabbed them with their dirks; several again used their pistols; but few of them had sufficient space to handle their swords. Macdonald of Clanranald, chief of one of the clans of the Macdonalds, assured me, that whilst he was lying upon the ground, under a dead horse, which had fallen upon him, without the power of extricating himself, he saw a dismounted horseman struggling with a Highlander: fortunately for him, the Highlander, being the strongest, threw his antagonist, and having killed him with his dirk, he came to his assistance, and drew him with difficulty from under his horse.

"The resistance of the Highlanders was so incredibly obstinate, that the English, after having been for some time engaged pell-mell with them in their ranks, were at length repulsed, and forced to retire. The Highlanders did not neglect the advantage they had obtained, but pursued them keenly with their swords, running as fast as their horses, and not allowing them a moment's time to recover from their fright. So that the English cavalry falling back on their own infantry, drawn up in order of battle behind them, threw them immediately into disorder, and carried the right wing of their army with them in their flight. The clan of Camerons, which was on the left of our army, having attacked at the same time the right of the English army, where there were only infantry, put it also to flight; but the Highlanders, when descending the hill in pursuit of the enemy, received, on their left flank, a discharge from the three regiments placed in the hollow at the foot of the hill, which they did not perceive till the moment they received their fire, which greatly incommoded them. Mr. John Roy Stuart, an officer in the service of France, afraid lest this might be an ambuscade laid for us by the English, called out to the Highlanders to stop their pursuit; and the cry of stop flew immediately from rank to rank, and threw the whole army into disorder. However, the enemy continued their retreat, and the three regiments at the foot of the hill followed the rest; but with this difference, that they retreated always in order, and acting as a rear-guard of the English army, and they continued a fire of platoons on us till their entrance into the town of Falkirk.

"As night began to appear, the English army entered the town, and fires were immediately seen in every part of their camp, from which we all supposed that they had retreated to it, and that we had not obtained a complete and substantial victory. The honour of remaining masters of the field was of little avail to us. We had no reason for believing that we had lost the battle, as the English army had retreated; but as we supposed them still in their camp, we considered it, at most, as undecided, and expected a renewal of the combat next morning.

"Fortunately the enemy did not perceive the disorder which had crept into our army, and of which Colonel John Roy Stuart was the innocent cause, by his excessive precaution and foresight. The Highlanders were

in complete disorder, dispersed, and the different clans mingled pell-mell together; whilst the obscurity of the night added greatly to the confusion. Many of them had even retired from the field of battle, either thinking it lost, or with the intention of seeking a shelter from the dreadful weather. It is often more dangerous to stop the fire and impetuosity of soldiers, of whom the best are but machines, and still more of undisciplined men, who do not listen to any orders, than to let them run every risk in order to carry every thing before them.

"I met, by accident, Colonel Brown, an Irishman, to whom I proposed that we should keep together and share the same fate. He consented, but observed at the same time, that the Prince having made him the bearer of an order, he wished to find him, with the view of communicating an answer. After having sought the Prince for a long time to no purpose, and without finding any one who could give us the least information respecting him, we fell in with his life-guard, in order of battle, near a cottage on the edge of the hill, with their commander Lord Elcho, who knew as little of what had become of Charles as we did ourselves. As the night was very dark, and the rain incessant, we resolved to withdraw to the mansion of Mr. Primrose of Dunipace, about a quarter of a league from Falkirk, having a crowd of Highlanders as guides who took the same road.

"On our arrival at the castle, we found Lord Lewis Gordon, brother to the Duke of Gordon, Mr. Frazer, son of Lord Lovat, and six or seven other chiefs of clans; but none of them knew what had become of their regiments. Other officers arrived every instant, all equally ignorant of the fate of the battle, and equally in doubt whether we had gained or lost it. About eight o'clock in the evening, Mr. Macdonald of Lochgarry joined us, and revived our spirits, by announcing for certain, that we had gained a most complete victory; and that the English, instead of remaining in their camp, had fled in disorder to Edinburgh. He added, in confirmation of this news, that he had left the Prince in Falkirk, in the quarters which had been occupied by General Hawley; and that the Prince had sent him to Dunipace, for the express purpose of ordering all of us to repair to Falkirk next morning by break of day.

"It is impossible, without having been in our situation, to form an idea of the extreme joy, which we derived from this agreeable surprise. As the enemy, in their retreat, had abandoned all their tents and baggage, their camp was soon pillaged by the Highlanders, and the booty carried away, notwithstanding the obscurity of the night, and the badness of the weather. The enemy lost six hundred in killed, and we took seven hundred prisoners. It was Lord Kilmarlock who first discovered the flight of the English. Being well acquainted with the nature of the ground, as a part of his estates lay in the neighbourhood, he was sent by the Prince to reconnoitre the English; and having approached the great road

to Edinburgh, beyond the town of Falkirk, passing by his pads and across fields, he saw the English army panic-struck and flying in the greatest disorder, so fast as their legs could carry them. Lord Kilmarlock immediately returned to the Prince, with an account of this fortunate discovery, who still remained on the field of battle, notwithstanding the dreadful wind and rain; but he then descended from the hill, about half past seven o'clock in the evening, immediately ordered the town of Falkirk, and detached as many troops as he could suddenly assemble to harass the English in their flight, who were yet at a short distance from us.

"The enemy were unable to avail themselves of their artillery during the action, and to carry it with them in their flight; and we found, next day, ten field pieces, half way to the hill, which they had not time to drag up to the top. They lost a great many men in the hollow at the foot of the hill, where the corn-fields were thickly strewed with dead bodies. In their flight they took one prisoner in a very singular manner. Mr. Macdonald, a major of one of the Macdonald regiments, having dismounted an English officer, and possession of his horse, which was very beautiful, and immediately mounted it. When the English cavalry fled, the horse ran off with the unfortunate Mr. Macdonald, notwithstanding all his efforts to restrain him, nor did it stop till it was at the head of the regiment, of which, apparently, its master was the commander. The melancholy, not at the same time ludicrous figure, which poor Macdonald would cut, when he thus saw himself the victim of his ambition to possess a fine horse, which ultimately cost him his life upon the scaffold, may be easily conceived."

There is another odd anecdote connected with this battle.

"General Cope is said to have enjoyed with evident satisfaction the news of the defeat of General Hawley. He had, according to the English custom, offered bets to the amount of ten thousand guineas, in the different coffee-houses in London, that the first general sent to command an army against us in Scotland, would be beaten, as he had been at Glendun; and by the defeat of General Hawley, he gained a considerable sum of money, and recovered his honour to a certain degree."

(To be concluded in our next)

#### LUCCOCK'S NOTES ON BRAZIL.

We continue our selections of curious matter from this volume.

In the Minas Geraes, (the author remarks) "Near to the Register we noticed an unusual number of parrots, which filled the air with their noisy screams, and reminded that although the country was so well cultivated, there were in it no *Anas*, a bird which had hitherto been considered as the companion of tillage; instead of them *Toucans* had become common. The people as they came along caught a large *Armadillo*, in which they dined, although the animal appeared very old. His armour had become

so small for him, or to speak more correctly, had not grown in proportion to his body, and was rendered soft by his fat. He was caught while asleep, and with great difficulty could be kept awake."

"Our next is an extract which we must save to the sense of our readers; for though 'travellers see strange sights,' Mr. L. does not represent himself as an eye witness.

"It had been reported early in the morning, that a creature called a Man-of-the-Woods, was seen the evening before, in a distant plantation belonging to the estate, sneaking off the heads of Milho; and carrying them away on his shoulder, in considerable quantities at once. He was represented as having a black face, being about five feet high, covered with hair, without a tail, and walking erect; and as belonging to a class of beings which are numerous in the neighbouring forests. I am not aware that any species of baboon exists in Brazil, and therefore expressed my persuasion that it was either some wretched vagabond of the European stock, driven to stealing, or a native Indian, or else what is called a Caambolo, one of the lowest class of Africans who, escaping as soon as possible from slavery, resume their native habits, run into the woods, and seek there a hard, and probably a precarious subsistence. My explanations however, with all their anxiety, availed nothing; all agreed that it was a mere brute beast, and as that day could be employed in taking him, upon his return to the growing corn, they invited me to be of the party, and convince myself that he was merely a macaco, or monkey; or if I chose to wait where I was, until evening, they hoped to show him to me in captivity or lead.

"The term Caambolo or Calambolo is derived from the manner in which negroes pronounce the Tupi word Caambociro. It signifies a person who is accustomed to wander in the woods, and denotes one of those beings who exhibit human nature in its lowest state of degradation. He sometimes avoids all intercourse even with his own species, lives upon fruit, roots, or any animal, which casually falls into his hands, and eats them all in their crude state, he makes no use of fire, habitation, or clothing; a these respects he does not differ from the rutes, and is timid in the extreme. I once purchased a new slave who proved to be of his class; he left the house, or rather farm, where he was stationed, and returned to the woods. I took great pains to reclaim him; my gentle means gave him confidence in me, and at last succeeded so far as to render him very attentive, though not very active, nor intelligent slave; he served me afterwards for several years, and I never had occasion to chastise him. The other class of Caambolos form societies, clothe themselves, and cook their food, but build no habitations, and never plant; they sometimes descend to the lains to steal, are in all respects a lawless sabbie, and on this account their haunts are perpetually sought after, and frequently broken up, by persons called Capitães do lato, who are appointed by government to scour the forests.

"Here also, as in many other woody parts of Brazil, the people believe in the existence of a pigmy race of men, which are said to be often seen, toward evening, gambolling or basking themselves, in open spaces and near the edges of the woods. They are described as about three feet high, well formed, of the colour of Europeans, and without hair on their bodies; as generally going on all fours, though frequently standing erect. Upon this subject I have spoken to a great many people, and find that their accounts generally agree; yet none ever pretended that he had secured one of them, none would guide me to their haunts; all excused themselves by saying, that it was an extremely difficult task to take them, on account of their activity and shyness; and that we might possibly wait four or five days, and even then be disappointed in our hope of seeing one. As there is little reason to doubt that there must be some ground for such reports, so confidently and generally propagated and believed, I am inclined to think, these creatures are the children of Indians, who in their playfulness expose themselves at the skirts of the woods, while their parents lie concealed because they know that they are in the neighbourhood of "bearded men."

There are, truly, many objects of natural history in these regions, which present the richest stores of that kind yet unexplored, perhaps, in the universe. We are sorry, that Mr. L. was able to give us only general descriptions, and not scientific definitions, of what he met with. For example, he states:

"Among the uncommon objects of natural history, observed by us, was the white Anou, a bird whose feathers are bearded, like those in the tail of the Bird of Paradise. The more compact part of them is of a dark brown colour, while the beard is of a light brown, approaching to white, giving this general cast to the bird. The back is blue, the parts about the joints of the wings a pure white, and the wing feathers a shaded brown. The tail, which is very long, contains four feathers on each side, three of them white with a broad bar of black across them; the fourth, which is the inner one, and covers the others when the bird is at rest, is brown. The bill is straight and strong, the head tufted, the legs slender, with three toes forward and one behind. In size and shape it resembles the Magpie.

"The Merlu of this region is entirely black, and about the size of a lark. It is the Crow of Brazil, and in many places is called Corvo.

"The Ariba Raba, or Cock-tail, is very common, much like the Lark in colour and size, not in habits nor song. Its name is derived from its manner of carrying the tail, which is very long, and in its attitude like that of the Magpie, only much more elevated. Hence when first settling, either on a twig or hillcock, it seems as though it was overweighted forward, and balances itself with difficulty.

"The Ornithology of the table land, in general, quite different from that of the lower districts."

"A snake, called the Jaraná, and held to be highly venomous, was killed this evening near our inn. It was about eight feet long, and, from the dinginess of its blue and yellow skin, was, I suspect, old or diseased. The blow, by which it was destroyed, had exposed the fangs of the lower jaw, in which state it was carelessly left; when a hen of the common domestic kind, with her chickens, approaching the spot, instantly gave the note of alarm, collected the terrified brood behind her, spread her wings, bristled her feathers, and seemed prepared either to fight or fly. Seeing the reptile motionless, she took courage, gradually drew nearer to it, at length made a hasty attack with her bill on the open jaw, and immediately retreated. She continued such attacks until she had taken something from each side of the jaw, and swallowed it. She then appeared to think no farther precaution necessary, but led her chickens to feed close by the carcass. I had frequently observed domestic fowls devouring ants and scorpions, and had watched with interest their battles with centipedes; but never before saw one attack so large a reptile, or seek its food from such a creature. Little did I imagine that the vesicles of poison in the jaw of a snake could be delicious, or even wholesome food for any living thing."

The following information respecting precious stones, may cause some of our fair readers to look doubtfully at their rings and necklaces.

"At Chapon, we visited the gold and topaz mines, the possessors of which are reported to be wealthy; but if they are so, it is in the midst of such a want of comforts as would make a Briton, not over delicate, completely miserable. They produced a large quantity of real topazes, and endeavoured to convince me that a cubical mass of yellow transparent spar, though differing so widely from the usual form, was a stone of that description: when closely pressed, however, they wished to insinuate, that it was composed of parts truly prismatic. We ought to distinguish between precious stones and such spars as these, which abound in the country, are of various colours, and though of almost as little intrinsic value as pebbles, are made to imitate the topaz, the emerald, the amethyst, and even the diamond, and as such are frequently passed off to inexperienced purchasers. The appearance of the imitative topaz is often more imposing than that of the real one of South America, for I never yet saw the latter in a perfect state, but almost invariably fractured at one end, frequently at both. Of the stones sent to Europe, under dazzling names, particularly as topazes, agao-marinas, and amethysts, many are nothing more than pieces of spar found in the beds of rivers, and affected by the common attrition of streams."

*Unedited Letters on the early History of Russia; written by Count Feodor Goloukin.*

You ask me when my *Ancient History of Russia* will be published; a work which has

been so long announced, and on occasion of which, Buonaparte so well explained his principles on the liberty of the press? It will not be published, Sir. The reasons to which I sacrifice my self-love as an author are good; and as I am certain you would approve of them, I feel it is better to suppress them than tire you with the detail. But, since you interest yourself about a nation so little known, and consequently, so ill judged of, I shall take advantage of the circumstance, to give you a sketch of this old history; a sketch very incomplete, indeed, but worthy of some attention, when we seek in matters of historical proof something more certain than the imagination of courtiers, the inspiration of poets, or the bad faith of detractors.

Three very distinct epochs here offer themselves to our view. Russia, having attained by gigantic steps to all the advantages which constitute great empires, and surpassing in every respect the contemporary monarchies; 2, Russia under the yoke of the Mongols; 3, Russia delivered, endeavouring to overtake in their progress the other states of Europe. The first part of the first epoch, and the first part of the third, (I except the latter part of it,) are the most remarkable and the most worthy of study. We will traverse them rapidly, stopping only at those objects which are the least known and the most worthy of being so.

Among the crowd of ambitious or needy adventurers who appeared on the stage in the middle ages, Rurick, the elder of three Norman brothers, who were invited to the assistance of the Slaves of Novgorod, a people till then unknown, founded on the confines of Europe and Asia, the first stationary empire which owed its existence to the great migration; and placed upon this throne, the existence of which is still unknown to most persons, a dynasty which reigned three out of seven centuries. It must be owned, that the first *debut* of this family was very remarkable; and it would be difficult to find another which so suddenly took so important a place in history. The first of them arrives at Novgorod to defend it, and subjugates it. His son (Igor, guided by a skilful tutor, (Oleg), establishes himself about five hundred leagues farther off, under the mild climate of Kieff, in the centre of a country destined by nature to agriculture and commerce; and his grandson, (Ivanitslaff), strong in the resources which his mother, (Olea), has prepared for him, is on the point of governing from Novgorod to Constantinople. The various tribes are already united, and form, as if by enchantment, a great people, which has its language, its laws, its arts, its commerce; which preserves its conquests, friends, cities, and colonies; imposes tribute, concludes treaties, and causes them to be respected. What a picture for the pencil of a historian; especially, when ancient and numerous annals furnish him with the proportions, the features, and the colours. This is what will be proved to you by the particular facts which I am about to communicate.

Valour had founded the empire. Its rela-

tions with Greece had given ideas of civilization, and of the arts which established laws, brought from the north with the yoke; and religion, which came from the south with peace, had subjected the whole to conservative principles, so that without dividing them, (a fatal mania, at that time common to all the monarchies which arose from the great migration,) one knows not when its progress would have stopped.

Kieff, which was civilized so early as the 10th century, and already celebrated for the fickle character of its inhabitants and their inordinate love of novelty, was soon corrupted. When the Poles, whom nothing had been able to stop, had forced its walls in 1020, it became a Capua to them, and luxury and pleasures destroyed an army which valour had not been able to subdue. The grand prince, Isiaslaff, obtained resources from Gregory VII., from the Emperor Henry IV., and from Boleslaus II. of Poland; and purchased them, not only by territorial cessions, but by presents so magnificent, that they excited the greatest astonishment in Europe; which inferred from them, that it could not fix too high a price on the assistance asked by the Grand Prince of Russia, nor take too much pains to render it necessary to him.

At the time of the foundation of the empire, the population was not in proportion to the extent of the territory. The government received or invited a number of foreigners, who were expelled from their own countries by ambition, their crimes, or their misery; and came to introduce them among us, and make us pay very dearly for the arts which they also brought. This mixture of nations, had in it at first nothing offensive. The Russian nation itself, was but a new mixture of Slaves, of Normans, and of aboriginal inhabitants subjected by them at different times. But it is difficult to conceive why the government, which had continual evidence of the serious inconveniences of this system, should have persisted for eight centuries in throwing every door open, and should not have perceived that such guests, who always begin by settling in the cities, and who consequently, have little influence on the population, fix themselves at last in the country as privileged conquerors, to invade with the fruits of their industry the fortune of the native inhabitants. If an irrefragable proof of this is desired, it will be found in the fact, that all the high nobility who are not Russian Princes, and who possess at present at least, the half of the fortunes of the state, are foreigners, who arrived from the fifteenth to the seventeenth century. The cause of the hatred which the Russians bore towards them from the eleventh century, was the difference of religion, which separated them from their neighbours. Placed between the Catholic Poles and Livonians, the Mahometan Tartars and the pagan nations of the north and the east, they saw themselves attacked by as many natural enemies as they knew modes of faith different from their own.

The towns then rapidly became populous. The chronicles inform us, that in 1090, a town which was besides remarkable for an extra-

ordinary and general fertility, an epidemic carried off in forty days 7000 inhabitants in the city of Kieff alone; and that in 1130, a similar distemper swept away 40,000 at Smolensko.

(To be continued.)

#### BRITANNY.

Having concluded our last notice of Mr. Stothard's publication with her account of a Breton marriage, it leads us, by contrast, to commence the present with the brief description of their funerals, one of which, that of a poor person, the authoress witnessed at the small village of Carnac.

"The body was placed within a coffin of rough boards rudely nailed together, and carried to the church door in a cart drawn by two oxen, yoked to each other with bands. The funeral retinue consisted of a few women completely enveloped by long black cloaks."

At this place the following remarks concerning the language also occur.

"The Breton language appears to me, from the number of French words I occasionally hear spoken with it, far more corrupted than the Welsh. I imagine it probably arises from the people of Brittany holding a freer intercourse, and being mixed more with the French, than the Welsh formerly did with the English; this may be accounted for, as Brittany is certainly a country easy of access, nor is it defended or insulated by those barrier mountains that characterise Wales.

"The Bretons do not resemble in countenance either the Normans or French, nor have they much of the Welsh character. They are a rude, uncivilised, simple people, dirty and idle in their habits. Their costume is generally a broad-flapped hat, beneath which their hair hangs long and loose; a coat lined with scarlet, and sometimes the upper part of the coat of dark mulberry colour, and the other lower half or skirts of the same colour, but of a faded tint, the diversity appearing to be entirely the effect of taste or choice, and not that of necessity; a white waistcoat, lined also with scarlet, and a broad belt round the waist, corresponding with the colour of the lining, or sometimes plaided, like a Scotch cloak. The goat skin dress is also very commonly worn, particularly in Bas Bretagne. Very few are barefooted: wooden shoes being generally used by men, women, and children. The women are invariably dressed in the peculiar costume I have already described; it differs here and there, but not importantly, in some of the districts. Many of the women of the very poorest kind, wear this dress till it becomes so dirty, patched, tattered, and ragged, that you can scarcely trace what it has originally been; and I have seen several children so wretchedly off for clothing, that they run about almost in a state of nature. The women who appear tolerably respectable and are dressed decently in their simple costume, look florid and healthy; while those attired in the ragged garments, bear a repulsive and meagre aspect: this arises, I am inclined

o believe from the greater dirt and poverty of the latter class."

That savage manners are not however confined to the lowest orders, but pre-eminently articulated by the upper and educated classes, the following anecdote from Nantes will emphatically testify.

"In the Museum here, which, though small, as a very elegant collection of interesting objects, chiefly of natural history, I could not view, without feelings of horror, the dried skin of a wretched German, suspended upon the walls: he was a royalist, who behaved gallantly in support of the unfortunate Bourbons, but falling at last into the enemy's power, he was *skinned, while yet alive*. In memory of their own cruelty, the people of Nantes now display the dried and extended skin upon the walls of their museum. There was not indeed, throughout all France, a more revolutionary or sanguinary set of people than the citizens of Nantes: to this day, a remnant of their former spirit still exists, evidently betrayed by their conversation and remarks, on deeds long since acted."

Orleans furnishes us with a picture of the French military, more entertaining, though hardly less disgusting.

"We alighted (says Mrs. S.) at our hotel five o'clock in the morning, and entering the large court-yard, to proceed into the house, we were not a little surprised by observing several French officers, magnificently dressed in the military costume, seated upon the stone posts near the entrance, whilst they were undergoing the operation of shaving by the regimental barbers, a view of every person who went along. French officers are generally poor, with a large share of military pride. They are allowed many advantages, which is [are] intended as a help to their scanty pay: for instance, they are admitted into all places of public amusement at half-price, and dine at an hotel in the same terms. One of these gentlemen readily amused us this morning. He breakfasted at five o'clock, in the room where we were sitting. Some of his companions continued smoking in the adjoining chamber. The officer took his seat at the table, before a dish of hot meat, with a large Newfoundland dog by his side. After slipping off the cork of the bottle with his finger and thumb—an action that displayed the vast number of knock diamond rings that adorned his hand, he filled out some wine, and drinking his dog, tossed it off very cheerfully. He then carefully sopped up the gravy in the dish with a piece of bread, which he offered to the dog, who, having first rubbed it with a nose, then licked it, at last turned away a head, when the delicious morsel was immediately swallowed up by his master, who finished his breakfast with a most satisfied air."

At another inn, at Abbeville, the following anecdote, useful to travellers, is related.

"When the bills were given to each individual after dinner, one of the Frenchmen did not sooner examine the contents of that presented to him, than he flew into a violent passion with the landlord, and was so exas-

perated that he literally danced about the room like a madman, swearing that he would not submit to such imposition. The astonished landlord averred it was nothing more than the usual charge, when the incensed traveller threw the bill in his face, immediately upon examining it, the landlord stepped up to the Frenchman and softly whispered something in his ear, but not so softly, but that an English gentleman made out the import, which declared that the garçon in mistake had given the Frenchman, a bill intended for a Monsieur Anglais. The Englishman insisted upon an explanation of the circumstance, to satisfy his suspicions, when it appeared that the bills presented to the English charged eighteen francs per head for the dinner, and those given to the French but five francs each person for the same fare."

It would be disingenuous not to state an occurrence of a different nature. Mr. Stothard with genuine antiquarian feeling, was very anxious to get De Clisson's (see our former Number) head from the tobaccoist's and replace it on the statue: for this purpose he visited the Curé, whose appearance and conduct are thus delineated."

"The Curé is a fine stately old man, remarkably precise and measured in his expressions. We found him seated by the dying embers of a wood fire; a solitary candle burnt upon the mantle-piece of a large old chimney; the oak panels of the apartment were decorated with the portraits of several saints; his rosary and books lay by his side. He was seated in an easy chair, dressed in a long black silk gown, bound round the waist with a broad belt; his venerable silvered hairs covered by a little close black cap: he seemed musing in serious meditation. His housekeeper, whose office was conspicuous by the bunch of keys suspended from her girdle, ushered us into the presence of her master with a stately manner, much resembling his own. The old man raised his head at our approach, and received us with the most formal politeness; although every word seemed weighed and delivered according to the relative importance of each, yet there was nothing forbidding or disagreeable in his manner. Mr. S. opened the conversation by making known his wish; but he had no sooner informed him we were English travellers, than the Curé rose from his seat, and welcomed us with cordial hospitality. The Curé then informed us that he had passed ten years in England during the emigration of the French, and had returned to his own parish of Josselin at the time of the short peace. "You are English people," said the old gentleman; "the English shall ever be welcome to rest in my home: I came into their country when I was driven from my own; I had neither friends, money, or their language, for the first three years; I eat my daily meal at their cost: I then taught them my tongue, and they regarded me as a brother; for ten years I was supported by their notice, and protected by their laws; gratitude opens my door at the approach of any of their nation." The venerable man came forward, seated us closer to

the fire, and ordered more faggots to replenish it. He pressed us to leave the inn, and begged we would take up our residence at his house. This we declined, but promised to breakfast and dine with him the next day, in compliance with his invitation, given in English, that we would take with him *the luck of the pot*. Accordingly the next morning we presented ourselves at the door of Monsieur le Curé, who received us in his state apartment: it was hung with old tapestry, and decorated with a few family portraits, languishing in the full-bottomed wigs of Louis XIVth's time; the oaken floor was so nicely waxed, that I nearly slipped down while Monsieur handed me to the great chair at the upper end of the room, which I found he considered the most ceremonious seat.

"After breakfast the Curé offered to conduct us through the church and some other buildings. We first visited the Penitentiary House he had erected at his own cost. It is calculated to hold five hundred persons. This Penitentiary is designed for those who are desirous of retiring for a short time to meditate upon their sins. The Sisters of Charity take care of the house, and attend upon the penitents. We then proceeded to the church; and while Mr. S. was arranging the mutilated figures, I was engaged in conversation with the Curé, who asked me innumerable questions; and, amongst the rest, if I had any relations in the army and navy? When I told him I had, he seemed pleased, and promised himself some amusement in looking for their names (where he would be certain not to find them), viz. in an old Court Calendar he had brought from England sixteen years since. Monsieur — is a complete character: hospitable, polite, and kind; but his attentions are rendered even painful by a most extraordinary observance of form and etiquette.

"He related to us an anecdote that evinced both his good nature and the extreme simplicity of his character: During the late war, a person belonging to an English ship, induced by motives of curiosity, landed on the coast of Brittany, without apprehending danger; of course he was immediately seized on suspicion of being a spy, and marched up the country. The escort arrived at Josselin with the prisoner, in a most distressed condition, his shoes being actually worn from off his feet; they brought him before Monsieur le Curé, who commenced his interrogations with—"You are an Englishman. What is your name?"

"My name," replied the prisoner, "is B—."

"B—," said Monsieur; "surely I must know that name. Stop a moment. I will return to you immediately." Away went the Curé to consult the old Court Calendar; and there finding Lord B—, peer of the realm, returned back to the ragged prisoner, convinced of his identity with the nobleman in question.

"My Lord," said the old gentleman, "why do you conceal your rank? Of what use can it be? What is your motive for doing so? Your name, you say, is B—."

You are a gentleman; and I find in my Court Calendar, Lord B——, Peer of the Realm. Now, if you are Lord B——, I will furnish you with money and necessities, and use the interest I have with my friends at Paris to get you out of France.

"I thank you, Sir," replied the prisoner. "I am certainly Lord B——, as you say I am; and if you will perform what you have so kindly offered, the money shall be returned when I arrive in England, by any means you may point out."

All succeeded to the prisoner's desire; and the money was honestly returned to the good Curé, who prides himself upon his own sagacity, and the great benefit arising from the old Court Calendar brought from England sixteen years since.

(To be concluded in our next.)

#### CUSTOMS, &c. OF AMERICAN INDIANS.

As the volume whence we derive these descriptions is very little if at all known in England, we are in hopes that our continuation of them through so many numbers, at a period when new works of merit are scarce, may be deemed no blameable departure from our more usual routine, of rarely carrying a subject beyond three successive publications.

The following is another wonderful proof of Indian sagacity in tracing an enemy.

"In the beginning of the summer of the year 1755, a most atrocious and shocking murder was unexpectedly committed by a party of Indians, on fourteen white settlers within five miles of Shamokin. The surviving whites, in their rage, determined to take their revenge by murdering a Delaware Indian who happened to be in those parts and was far from thinking himself in any danger. He was a great friend to the whites, was loved and esteemed by them, and in testimony of their regard, had received from them the name of *Duke Holland*, by which he was generally known. This Indian, satisfied that his nation was incapable of committing such a foul murder in a time of profound peace, told the enraged settlers, that he was sure that the Delawares were not in any manner concerned in it, and that it was the act of some wicked Mingoes or Iroquois, whose custom it was to involve other nations in wars with each other, by clandestinely committing murders, so that they might be laid to the charge of others rather than themselves. But all his representations were vain; he could not convince exasperated men whose minds were fully bent upon revenge. At last he offered that if they would give him a party to accompany him, he would go with them in quest of the murderers, and was sure he could discover them by the prints of their feet, and other marks well known to him, by which he would convince them that the real perpetrators of the crime belonged to the Six Nations. His proposal was accepted, he marched at the head of a party of whites and led them into the tracks. They soon found themselves in the most rocky parts of a mountain, where not one of those who accompanied him was able to discover a single track nor would they believe that

man had ever trodden upon this ground, as they had to jump over a number of crevices between the rocks, and in some instances to crawl over them. Now they began to believe that the Indian had led them across those rugged mountains in order to give the enemy time to escape, and threatened him with instant death the moment they should be fully convinced of the fraud. The Indian, true to his promise, would take pains to make them perceive that an enemy had passed along the places through which he was leading them; here he would shew them that the moss on the rock had been trodden down by the weight of an human foot, there that it had been torn and dragged forward from its place; further he would point out to them that pebbles or small stones on the rocks had been removed from their beds by the foot hitting against them, that dry sticks by being trodden upon were broken, and even that in a particular place, an Indian's blanket had dragged over the rocks, and removed or loosened the leaves lying there, so that they lay no more flat, as in other places; all which the Indian could perceive as he walked along, without even stopping. At last arriving at the foot of the mountain on soft ground, where the tracks were deep, he found out that the enemy were eight in number, and from the freshness of the foot prints, he concluded that they must be encamped at no great distance. This proved to be the exact truth, for, after gaining the eminence on the other side of the valley, the Indians were seen encamped, some having already laid down to sleep, while others were drawing off their leggings for the same purpose, and the scalps they had taken were hanging up to dry. 'See!' said Duke Holland to his astonished companions, 'there is the enemy: not of my nation, but Mingoes, as I truly told you. They are in our power; in less than half an hour they will all be fast asleep. We need not fire a gun, but go up and tomahawk them. We are nearly two to one and need apprehend no danger. Come on, and you will now have your full revenge!' But the whites, overcome with fear, did not choose to follow the Indian's advice, and urged him to take them back by the nearest and best way, which he did, and when they arrived at home late at night, they reported the number of the Iroquois to have been so great, that they durst not venture to attack them."

This Duke Holland, the author also adds, "Once found a watch of mine, which had been sent to me from Pittsburgh by a man who had got drunk, and lost it in the woods about fifty miles from the place where I lived. Duke Holland went in search of it, and having discovered the tracks of the man to whom it had been entrusted, he pursued them until he found the lost article, which he delivered to me.

The following is a dreadful story, illustrative of the Indian character.

"In the winter of 1739—40, ever since remembered as the hard winter, when the ground was covered with a very deep snow, a woman with three children, was coming from beyond the Allegheny mountains on a

visit to her friends or relations residing at the great island on the west branch of the Susquehanna. After she had reached that river somewhere about *Achtachangi Clamwi*, which the whites have corrupted into *Chingeleamoose*, the snow fell in earlier than had been before known, to such a depth, that she could not proceed any farther. She began with putting herself and her children on short allowance, in hopes that the weather might become more moderate, or the snow so hard that they could walk over it. She strove to make her little store of provisions last as long as she could, by using the grass which grew on the river's edge, and certain barks as substitutes, which she boiled to make them digestible; but more snow falling, until at last it rose to the height of a foot or six feet, she was deprived even of that wretched food, and the wolves hovering about day and night, often attempting to rush into her little encampment, her whole time was taken up with procuring wood and making fires to prevent herself and her children from being frozen to death, and keeping those voracious animals at a distance by throwing out fire-brands to them. Her situation, at last, became intolerable. Having no alternative but that of sacrificing one of her children, she resolved on destroying the youngest, in order to preserve the others and herself from the most dreadful death. After much hesitation, she turned away her eyes, and with a trembling hand gave the fatal stroke, filling at the same time the air with her loud lamentations.—She now thought she had obtained a temporary relief, and that she might be able to support herself and her surviving children until a change in the weather should take place, so that they could be able to proceed on their journey; but the wolves getting the scent of the slaughtered child, became more furious than before, her danger every moment became more imminent. She now filled the air with her cries and supplications to the Great Spirit that he would look down with compassion on her awful condition, and save them by his almighty power.—But still the danger increased, the horrid food was almost exhausted, and no relief came. Already she contemplated sacrificing another child; she looked at each of them again and again with a mother's eye, now resolving on killing the one, then changing her mind, and endeavoring to determine on the destruction of the other; she hesitated, wept, despaired, and the children, well understanding what she meant, prayed that they might all go together. While in this situation, her husband already lifted to strike the fatal stroke. O ye! of two approaching Indians strikes her ear, and the murderous weapon falls from her hand. The men with rackets to their feet now appear and the dreadful scene is once closed. They had provisions with them. They made a pair of rackets for the woman to walk on, and brought her and her children along in safety to the Big Island, where her informants resided at the time. I can remember whether they told me that she had gone to that spot in consequence of a dream, or of some strong presentiment or

they should find human creatures in distress; certain I am, however, that it was owing to one or other of these causes."

### Wine and Walnuts.

OR AFTER DINNER CHIT-CHAT.

By a Cockney Grey Beard.

#### CHAPTER X.

More Worthies of the Club at Old Slaughter's.

"I wonder if there be any one so stupid, in traversing the complicated map of this great dirty town, in casting his eye towards the numberless shops, stocked as they are with the endless wares of that inveterate biped man, has not marvelled at the sight, and, pausing, asked himself, how this multitude of traders pick up a living?—for one cannot but wonder that the avowed spirit of circumspection does not teach them to eat each other up."—This soliloquy burst from Dr. Arbuthnot's one evening at Old Slaughter's, as he was in the act of shaking the ashes from his pipe.

"Yet one sees," said he, "that almost every plodding wight contrives to pay his rent, maintain a hospitable board, send his wife with his boys and girls smartly dressed to church, pull his purse-strings for a summer trip to wash off the London smoke in the salt water, and spare somewhat for a treat to the play, when winter for the tallow-chandler and the coal-merchant drives on a roaring trade."—"I and my cane have often laid our heads together to account for this," said the facetious physician, "but somehow we have come to no satisfactory conclusion; pray what is your opinion of the matter, brother Cheyne," accompanying the ques-

\* Dr. Arbuthnot, a Scotsman, and related to the noble family of that name. "The learning and skill of this great man," said a late author, drew forth the applause of all his contemporaries, amongst whom he seems to have had no enemies; even Pope, with all his spleen, could not withhold his tribute of applause: he used frequently to say of him, that of all the men he had met with or heard of, Dr. Arbuthnot had the most prolific wit, and that, in this quality, Swift only held the second place. He was physician to Queen Anne. His skill in recovering her Majesty from a dangerous illness, was the subject of a pastoral from the pen of his esteemed friend John Gay.

"While thus we stood as in a stound,  
And wet with tears like dew the ground,  
Full soon by bonfire and by bell,  
We learnt our liege was passing well."  
The next couplet would make worthy uncle Zachary smile were he alive now.

"A skillful LURICK (so God him speed)  
They say had wrought this blessed deed;  
This leech Arbuthnot was yeleft,  
Who many a night not once had slept,  
But watch'd our gracious sov'reign still:  
For who could rest when Anne was ill?  
Oh! may at those beneficent sweetly sleep  
Shear, swains, oh! shear your softest sheep."

Dr. Arbuthnot resided in Cork-street, Burlington Gardens.

Dr. Cheyne, also a native of Scotland, an emi-

tion with a gentle slap on the shoulder of that great good-natured Scot, which roused him from his lethargy.

Dr. Cheyne opened his eyes and the lid of his large gold box at the same moment, took a copious pinch, offered it to Arbuthnot, and "legged him to repeat his question, which he did in fewer words, ending with "Do you think there is a fellow so stupidly dull as not to have asked himself how this comes to pass?"

"Toot, toot, mon!" said Cheyne, in his Scottish dialect, at the same time rapping his box with his fat knuckles: "if you mix up your prescriptions as unguardedly as your reflections, the good Lord preserve your patients! How know ye but I may be that dull stupid fellow? I tell ye, Dr. Arbuthnot, that the thought never entered my head, though now you mention it, mon, I think it comical enough;" then turning to my great uncle, he added, "here's Mr. Zachary Hardcastle, who has walked throw London all his life, why did you not put your question to him, mon? His sagacity no doubt would afford ye satisfaction in a trice."

"Well, friend Hardcastle," said Dr. Arbuthnot, "Cheyne is in the right for once; I'll be bound for it you have turned this subject in your thoughts. Come, favour us with your opinion."

Now my uncle Zachary, like his friend old Jonathan Richardson, could not boast of his scholarship; yet, like him, he had read much, and had reflected more, which, with a clear head and quick discernment, fitted him for the society of men of science and men of letters, and others who had the additional advantage of birth. His natural good parts, and the urbanity of his manners, made ample compensation, in the opinions of the wisest of the club, for his deficiency in the knowledge of the schools: indeed his unsophisticated opinions of men and things were always received with attention and respect.

Dr. Johnson sometimes mixed with the coterie at Old Slaughter's; he was a member, and held my uncle in great regard. Not finding him there one evening, he observed, "I hope the old gentleman is well; we cannot spare him, sir," addressing himself to Dr. Hoadley; he is the nucleus of our circle."

Fielding used to say, "when old Zachary

nent physician, and a distinguished writer, came to London when about thirty years old, and mixing with the *bon vivans* of that tavern-going age, from his excesses, increased from a slender make to the extraordinary weight of more than thirty stone. When becoming short-breathed, lethargic, and listless, he changed his habits, and by extreme attention to regimen, reduced himself again to less than twelve stone. He wrote an *essay on Health and Long Life*, another on the *Treatment of the Gout*, other medical works, and *Philosophical Principles of Natural and Revealed Religion*.

Dr. Hoadley, Chancellor of Winchester, a kind and intimate friend of Hogarth's, a lover of private theatricals, and occasionally a visitor at the club at Old Slaughter's.

is absent, Sock<sup>d</sup> is always snuffing the candles to throw a light upon us."

Certain it is, he was a universal favourite there, and Sock, who rarely quitted the room, used to listen for his coming when the club was flat, as a shut-up fond spaniel anxiously waits for his master; and when he heard his footstep, he used (unbidden of course) to whisper the chair, "Sir, I hear Mr. Zachary Hardcastle on the stairs."

But to return to the two worthy doctors, and the question of how the shopkeepers retained their customers. To this my uncle replied, "Why, gentlemen, I humbly ascribe it to that spirit of benevolence which Providence has wisely ordained to proceed hand in hand with civilization; that *kind feeling*, which urges you to return again to purchase your necessities, where you have already conferred an obligation."

"I do not know how it is," rejoined my uncle, "but if I lose my penknife, I bear the inconvenience, and pass by cutlers for days and weeks, impelled to go at last to Russell-court to get another. It was there I parted with my breeches money to purchase the first knife I ever possessed. So it is with my fishing tackle; for though Higginbotham's hooks are considered by the best judges to be of excellent temper, yet I never crossed his threshold; I should feel compunction were I to desert the old Flying Fish<sup>d</sup> in Crooked-lane."

The doctors though frequently opposed in consultations, agreed in this case, and gave my great uncle credit for his solution. Arbuthnot, as all the world knows, was a humourist, and often spoke of his profession by way of joke. "Thou art a sage, friend Zachary," said he; "with half a year's reading, and a month's walk round the quadrangle of St. Bartholomew, Cheyne's ponderous gold box and sagacious wig, though wouldst astonish the college, send him back as thin as he came, to the north, and ride, instead of him, Magnus Apollo, about the town."

"Poor Cheyne! I have heard my uncle say, when, in his latter days, he was in the mood to be talking of his departed friends. "Poor Cheyne! It was unworthy of the wits to run him so hard upon his bodily infirmity. It pleased his maker to give him a superabundance of flesh;" and then he would smile, and place his hands as though his slender fingers would span his own ribs;

<sup>d</sup> Sock, the head waiter at Old Slaughter's, supposed to be an illegitimate son of James Spiller, the comedian, who was founder of a club held in Clare Market, at the Bull's Head, changed after the death of this actor to the Spiller's Head. Several years after the death of Hogarth, an impression from a large silver tankard which he had engraved for the use of this club—a sort of *loving cup*, sold for ten pounds. Such was the rage for any relic of his ingenious graver.

<sup>e</sup> Higginbotham's old shop for fishing tackle, in Fleet-street, near Temple Bar.

<sup>f</sup> The Flying-fish, another celebrated shop, recommended by Isaac Walton, in Crooked-lane, was famous for fishing tackle in the time of Henry VIII.

I shall be no mighty burthen to bear to the grave, that's certain; it is well that I have escaped their waggeries;" and then he would laugh outright. "They could take no hold of me, the mad-caps! I slipped through their fingers. But as for Dr. Cheyne, he of all men should have been spared; for he increased in bulk in the exact ratio of his increasing kindness for his friends. Those who loved not home, seduced him out; he, good-hearted creature, was too social to refuse, until his hours, o'days and nights, were divided 'twixt his patients and the punch-bowl."

"Arbluthnot," the Doctor used to say, "he did not mind; he has a noble soul," said he, "and worthy of his blood; Fielding is a gentleman, his wit hurts not—not it; Monsey is sterling gold: Toot, toot! such wits I love, ye ken me mou; Willey Hogarth too, the playful little loon; I'd wrap him in my cloak, and bauld him near my inmost heart. But touching that heartless mon, that coldly satirizes his friend in dirty print, faugh! I'd not offer him a pinch of snuff," and then the friendly doctor handed his golden box all round.

"No, no," said my uncle; "the witting who assailed poor Cheyne, was sent to Coventry; our club would never recognize the deed. No doubt the satirist duly felt his shame, for though we rarely saw the doctor henceforth at our old haunts, the other did not dare appear where he was used to show his honest countenance. A few old associates retained his friendship, years after he took to his starving regimen, and happily I for one," said my uncle Zachary, "to the last;" and then he added "*ecce signum*," with a sigh, and showed Cheyne's mourning ring.

"It was no uncommon humour with the doctor," said my uncle, "when surrounded by a select few, to be very amusing on himself. Sometimes he would quote the wit of Falstaff, with admirable fitness, which, heightened by his northern brogue, was most mirthful."

"Once, I remember," said my uncle, "having an appointment with him to meet Dr. Monsey, and dine with the curator at the Physic Garden at Chelsea: we were invited to see an American aloe in bloom. Poor Eluret was there making a drawing of an exotic for the Duchess of Portland, when Phil. Miller gave me a curious walking-stick that was his father's, which he cut from

Dr. Messenger Monsey, physician to Chelsea College for many years. A gentleman well known in the coteries at the Grecian, the Mitre, the Bedford, Button's, Wills', and the other taverns, the rendezvous of all the distinguished literati, and others, men of science. He possessed a comprehensive understanding, had a lively genius, and was a wit of the first class. His life extended nearly to a century: his humour, good nature, and vivacity, remained to his last day.

Philip Miller, chief gardener at the Physic Garden, belonging to the apothecaries company, at Chelsea, which appointment he held for half a century. His father filled the same situation before. Philip was author of the celebrated work, the Gardener's Dictionary.

a yew that was torn up by the roots in the great storm in 1703. Miller was then revising for another edition of his valuable Dictionary: he was an intelligent and most obliging man. We took our wine under a magnificent cedar, it was a hot afternoon, and I thought he and Monsey would have died outright, when Cheyne related what had passed on our way thither.

We took a pair of oars at York Stairs, Cheyne, Morrell, and I. The watermen were lively fellows, and away we rowed, when soon we came along-side a west-country barge of extraordinary length. The bargemen<sup>a</sup> no sooner discovered the immense broad back of Cheyne than they began to let loose their ribaldry and wit upon him. "Hoy! trim the boat, cockneys," was the first salute: Cheyne had made it yield on one side by turning round to have a look at them. "Dang it," said one, "there's no mighty matter o'brains wanted to fill such a wig as thine. Hoy! old fatty." "What thou com'st from the tower o' Lunnon, dost 'ee?" bawled out another. "What, thou'rt been vetching an old superannuated elephant to take on to grass?" Cheyne was almost choaked with laughter, and we were afraid he would upset our boat.

The doctor would not allow the watermen to row away; "let the fellows indulge in their humour," said he; "I'll attack them just now"—"and verily he did," said my uncle, "with a vengeance. The countrymen, for all their wit, were beaten outright. Never did bullying bargemen get such a tongue drubbing. The watermen, the cunning rogues, managed the boat with admirable dexterity, and played round them as does the *thrasher*<sup>c</sup> round the whale. In short, the bargemen had no more chance with the doctor than has that unwieldy monster, with his tormenter, that prankish fish.

<sup>a</sup> Dr. Morrell, another worthy friend of Hogarth's, who kindly superintended the *wording* of his very ingenious and original work, the *Analysis of Beauty*.

<sup>b</sup> The up-country bargemen were, in days of yore, famed for their ribaldry and wit—an overmatch even for the watermen. It was customary for those fellows to rate each other; and passengers frequently came in for a share of abuse. The Duchess of Kendal and her suite got a most memorable drubbing, which she complained of at the court of George I. His Majesty had the good sense to laugh at the joke.

<sup>c</sup> In allusion to this readiness of the lower class, the sage Johnson once observed—"Sir, with us, insolence in peace, is bravery in war."

Burton, the celebrated author of the *Anatomy of Melancholy*, was himself so subject to that fatal malady, that he used to stand for hours to listen to the bantering and wit of the bargemen, at the bridge near Friar Bacon's study at Oxford; he said nothing so contributed to raise his spirits.

Some curious dialogues of these bargemen are to be found among the Harleian MSS. at the British Museum.

<sup>d</sup> The *Thrasher*. This fish, about six or seven feet in length, has a strange antipathy for the whale; he swims around him, springs out of the water a considerable height, and alighting on him, slaps the huge animal with such force, that the report may be heard for two or three miles.

"When we stepped on the shore at Don Seltoro's," said my uncle, "the watermen were so delighted with their fare, for his victory over their annoying rivals the west-countrymen, that they said, 'I hope your honours will return by water; we'll wait till midnight, and row you back for *lore*.'"

At this moment a black cloud, a *diary south-wester*, was travelling fast over Battersea, and threatening the restless waters of Chelsea-reach. "No, no," said Cheyne, pointing to the waves, and patting with both hands his mighty corporation, and assuming the roaring of Falstaff, "I would return with you, my hearty fellows, but I have an *alchemy in sinking*."

## ARTS AND SCIENCES.

### THE NORTHERN EXPEDITION.

Desirous, for the reasons stated in our last, to supply as much intelligence as we could obtain on the subject of this interesting Expedition, we have copied the Admiralty Chart of its course, &c. in a manner suitable to the Literary Gazette; and have to state the following particulars, on which the public may rely.

It is as certain as important to notice, that there can be no doubt of the vessels having crossed the *Magnetic Meridian*, and entered the *Polar Sea*.

Our readers may remember Captain Scoresby's conjecture with regard to the mean temperature during twelve months at the North Pole, being from ten to twelve degrees above zero. His hypothesis was found to be erroneous; for our navigators ascertained, that even in the latitude where they wintered, the mean annual temperature was two degrees below zero! Owing to this intense cold they endured great hardships; of which it was no small aggravation, that for the last nine months they were upon short allowance of bread, and during the summer months of other necessities, thus adding the cravings of hunger to the pinchings of frost.

It affords a gratifying instance of the right feeling and characteristic perseverance of British sailors, to tell that the men (who could not be buoyed up by the same ideas of future fame which solaced their officers in suffering hardships) bore every deprivation, not merely with patience and equanimity, but with good humour. Frequently, when they had returned from a day of fatiguing and unproductive search for game, they wrapped themselves in their blankets, to try by sleep to forget their exhaustion, and that appetite which they durst not satisfy, lest they should, by

encroaching on their next day's scanty allowance or on their general stock, be in the end confined to these dreary regions starving and without subsistence. Notwithstanding this, never a murmur escaped one of them; but for patience, fortitude, and firmness, they displayed a picture unsurpassed even by the noblest examples of English Seamen.

The following anecdote is worth preserving:—Acting Plays was one of the amusements devised to while away the long night of the Polar Circle. A drama was written by Mr. Parry, solely to please the men, and called "*The North West Passage*." The scenery was painted by Mr. Beechy, and the officers were the performers. The delight of the crews was so great that they not only clapped, but loudly cheered the actors on every favourable impression. One of the latter was so amused with this, that on making an exit he was induced to go into the house, to see how the thing looked. He happened to place himself immediately behind the Boat-swain and another man, who exclaimed with rapture, "Oh, it's beautiful! it's beautiful!" "Beautiful, do you call it," returned the Boatswain, "Beautiful! I say by G—— it's philosophy!"

A curious circumstance in natural history has been mentioned to us. It is stated that one of the she-wolves of the country where the vessels were laid up, formed an intimacy with a ship dog, and almost daily visited him for some time, as if he had belonged to the same species. At last the dog a setter belonging to one of the officers of the Griper, followed his wild companion and was never seen more. Another dog from the Hecla also went off, but returned, though with his throat all mangled.

The wolves were large, and were heard nightly howling in a most disagreeable manner. The other quadrupeds found, when the summer returned, were the musk-ox, of which several were killed, the deer, the fox, and the mouse; the latter remained through the winter, were numerous, and changed from brown to white. The fowls were chiefly the arctic gull, the glaucus, the ptarmigan (which has been called the partridge), and a singularly beautiful duck denominated the king-duck.

The expedition arrived at the entrance of Lancaster Sound, on the 1st of August 1819. On the 7th the ships were in the Regent's inlet (see the chart), and there, in about 90° of long.

the variation of the needle was, we understand, about 120° west. Stopped by ice, they left the inlet, which is supposed either to extend to Hudson's Bay, or trend along the northern shore of America, and resumed their progress up Barrow's Straits, leaving behind them Croker Bay (the Croker mountains of Captain Ross.) They speedily discovered the group of islands, where Lowther Isle is marked, nine in number, and named The New Georgian Isles. Proceeding onward, they observed, when rather more than half way to the ultimate point at which they arrived, that the variation of the needle was above 120° east: thus it appears that the magnetic meridian must lie between that degree and the degree of 90, which we observe from the chart, runs through the inlet, where the variation was towards the west. At sea the compass had been quite useless since the 7th August, and it was only on land that the needle traversed. The greatest dip was above 88°; and our scientific readers, putting these data together, will perhaps agree with us in supposing that the magnetic pole is situated somewhere on the American continent, between the longitudes we have mentioned, and below the latitude of 70°.

On the 7th of September, after encountering many dangers, the vessels were anchored in Winter Harbour, Melville Island. In the beginning of November their night began, and it lasted till the beginning of February 1820, when the sun was seen for a few minutes above the horizon. This luminary gradually prolonged the time during which it rose, till in June it became constantly visible, circling round and making changeless day. On the 1st of August the vessels were released from the ice, nearly as suddenly as they had been overtaken by the winter; and our hardy countrymen with the blessing of Providence, were enabled to pursue a homeward, but still perilous course. Their furthest point was beyond 114° west. The ice all around them in the Polar Sea was above 40 feet thick; and no vessel could by possibility navigate farther in that direction, north, west, or south. It is probable therefore that Regent's Inlet will be more minutely explored by the next expedition, sent into these parts, and that hardly any other attempt will be made to the westward of Liddon's Gulf (so named from the commander of the Griper, not Seddon, as has been erroneously printed). The ships were roofed over dur-

ring the winter, and the crews did not, as reported, erect huts on shore. Melville's Island was however explored by hunting parties, and Capt. Parry cruised it, and was absent for three weeks together. It is reckoned about 140 miles long, and from 30 to 40 broad. It is also supposed that the whole Sea north of the American continent is broken into islands.

To this hasty enumeration of interesting particulars we shall not now add much. We need only notice, that natural history has not been much enriched by the objects obtained. Only one bear was seen during the stay at Melville Island: there were no fish, and no game of any kind till the summer came, when those birds and animals we have mentioned made their appearance. Grass, saxifragium, and poppies, formed the herbage, in patches and tufts, which looked green and gay at a distance, but was very thinly scattered over the marly surface of the earth. In geology, limestone, sandstone, and slate, were most prominent; coarse granite was found in round detached pieces in the ravines, and other mineral specimens were picked up. Some of the isles were amazingly precipitous, rising from 3 to 800 feet above the water. From the entrance of Lancaster's Sound to Melville Island, the land gradually declined, till from towering and pointed rocks, it became gently undulated.

The distance between Winter Harbour and Copper-mine River may be about 150 or 200 miles. The whole distance which the expedition went from the mouth of Lancaster's Sound, was about 500 miles. There were traces of old Esquimaux huts on Melville Island.

We had forgotten to mention, that the Owl, in full beauty of feather, seemed to inhabit this inhospitable place throughout the year.

The lowest temperature was 56° below zero.

These are the chief facts which we have gathered respecting this truly gratifying expedition, which not only reflects honour on all concerned in it, but on the country. Mr. Barrow's presence is happily illustrated by its results, which have so completely established all that he predicated. No is Captain Parry's eulogy to be lightly spoken: his whole conduct has been admirable; and we imagine that this sketch will greatly increase the public anxiety to see the precise details of a

voyage which has opened a new sea to British navigation, and gone far to indicate the very seat of one of the greatest wonders in nature. Upon this subject, we have heard that Sir H. Davy has made some important discoveries by experiments with the galvanic battery at home; and we look with profound curiosity to the further development of the principles of magnetism, electricity, and attraction, to which these circumstances will stimulate and help the scientific world. The tables and other data in Captain Parry's work, must be of immense consequence.

The *Griper* is now at Deptford, having been nearly lost off Sheerness: the *Hecla* has been refitted at Leith, and is daily expected in the river.

#### LITERATURE & LEARNED SOCIETIES.

##### LORD BYRON'S TRAGEDY.

The tragedy about to be published by Lord Byron, naturally excites a degree of expectation and curiosity commensurate with the fame of the author; and we have endeavoured, in some measure, to gratify this feeling, by relating the historical facts on which the plot is constructed. With this view, referring to several works, we found that Sismondi, on the Italian Republics, gave the most copious details; and have accordingly translated his version of the story of *Falieri, or the Doge of Venice*, for such is the name of the play. The following are the remarkable particulars of a conspiracy in which the head of the state was the principal conspirator. After mentioning the death of the preceding doge, Andrea Dandolo, Sismondi thus proceeds:

On the 11th of September 1354, (four days after the death of the doge, Andrea Dandolo) the forty-one electors proclaimed as his successor, Marino Falieri, Count of Val de Marina, a man of seventy-six years of age, whose wealth, and the functions he had exercised, ranked him among the first citizens of Venice.\* Falieri had a young and beautiful wife, of whom he was extravagantly jealous. He in particular suspected Michele Steno, one of the three chiefs of the Quaranti, or criminal tribunal; though Steno was in reality paying his court not to the wife of the Doge, but to one of the ladies of his household. At a public festival, on the last day of the carnival, Falieri remarked the familiar and somewhat indecorous conduct of this woman towards Steno, and he called the latter out of the assembly. Steno, in a fit of passion, wrote on the ducal throne, in an adjoining apartment, two lines, casting a reflection on the honour of the Doge and the fidelity of his wife.†

† Marino Falieri dalla bella moglie, altra la gode ed egli la mantiepe.—Sanuto vite de Duchis. p. 631.

This was a mortal offence to the jealous Falieri; he denounced Steno to the Avogadori, to whom he preferred his complaint. He expected to see his insult avenged with exemplary severity by the Council of Ten; but the cause, instead of being submitted to that council, was referred, by the Avogadori, to the Quaranti itself, of which Steno was president. The momentary irritation, the confusion of the festival, and the license authorized by the mask which concealed the criminal, were considered as circumstances tending to palliate the offence, and Steno was condemned only to one month's imprisonment. The Doge, more irritated by this lenity than by the original offence, extended his resentment and his desire of vengeance to the whole Quaranti, for having so ill punished the criminal; and to the whole nobility, for not taking to heart the insult he had received.

Meanwhile there existed among the people of Venice a secret hatred towards the nobility, who had exclusively usurped the sovereignty, and deprived the nation of its rights. The insolence of some young patricians redoubled the popular animosity. They availed themselves with impunity of the protection of powerful friends to introduce themselves into the families of the citizens to seduce their wives and daughters, and afterwards to ill-treat the fathers or husbands whom they had dishonoured.† Israel Bertuccio, a plebeian, the chief of the arsenal, had been insulted in this way. He preferred his complaint to the Doge, against a gentleman of the house of Barbaro. Falieri, while he expressed pity for his misfortune, assured him that he would never obtain redress. "Have I not myself been insulted," said he, "and is not the mock punishment of the criminal a new offence to me, and to the ducal crown?" Plans of revenge now succeeded judicial accusations. Israel Bertuccio made the Doge acquainted with the names of the principal malcontents. The conspirators met for several successive nights in the presence of the chief of the republic, and even within the walls of his palace. Fifteen plebeians, conjointly with the Doge, laid a plan for overthrowing the government.

The conspirators agreed that each of their party should secure forty friends, who should hold themselves in readiness to act on the night of the 15th of April 1355. Least their secret should be divulged, they resolved merely to tell their associates that they intended to employ them to assist in surprising and punishing, by the authority of the *Signoria*, the young gentlemen, whose profligacy had excited the indignation of the people. The signal for action was to be the alarm bell of the palace of St. Mark, which could not be rung without an order from the Doge. The conspirators were to enlist in their party only such citizens as were noted for their hatred of the nobility, so that they might faithfully keep the secret, which was to be in part contained to them. On the ringing of the alarm-bell, the conspirators were to circulate a report that the Genoese fleet was before the

city; they were at the same time to proceed to the square of St. Mark, to occupy all the avenues, and to massacre the nobility as they arrived in the square to tender assistance to the government.‡

Every preparation was complete, and the secret of the conspiracy was faithfully kept until the eve of its execution, when a furrier, named Bertrand, a native of Bergamo, who had been appointed by one of the conspirators to head his forty associates, learnt some particulars respecting the course he was to pursue on the following day, which did not exactly correspond with the supposed orders of the government, in obedience to which he thought he had hitherto been acting. That very evening he revealed to Nicolo Lioni, one of the members of the Council of Ten, the plot in which he had innocently been implicated. Neither the one nor the other suspected that the Doge was at the head of the conspiracy, and they lost no time in acquainting him with the whole affair. Falieri wanted either resolution or address to suppress the discovery; he by turns affected his doubt of the circumstances that were unfolded to him, and declared that he already knew all and had adopted the necessary precautions.||

His inconsistent behaviour excited the suspicion of Nicolo Lioni, who, on leaving the Doge, proceeded to the Council of Ten, and produced the memorandum of the conspirators, which he had received from Bertrand. They were all arrested in their own houses by order of the council. Guards were stationed throughout the city, on the steeples of the churches, and on St. Mark's Tower, to prevent the ringing of the alarm bell. Several of the conspirators were put to the torture; and by their confessions it was ascertained that the Doge himself was at the head of the plot.

Measures having been taken to secure the tranquillity of the city, the criminals were arrested, and the Doge was placed under a vigilant guard in his palace. However, the Council of Ten were not certain that the constitution authorised them to pass judgment on the chief of the state. They summoned twenty gentlemen of the highest rank, to take part in their deliberations on this important occasion; and thus was established a powerful and permanent body, called the *Giunta* or *Zenit*.\* The Doge was arraigned before the Council of Ten, united with the *Giunta*. He was confronted with the principal conspirators, who were afterwards ordered for execution: he confessed the part he had taken in the conspiracy, and after a trial of two days, sentence of death was passed on him. He was beheaded on the 17th of April, 1355, on the grand staircase of the ducal palace, namely, the very spot where the Doges, on entering upon their functions, took the oath of fidelity to the republic. During his execution, the gates of the palace remained closed; but immediately after, a member of the Council

‡ Matteo Villani. L. V. c. 13, p. 311.

of Ten appeared on the balcony, holding in his hand the bloody sword:—"Justice has been executed on a great criminal," said he to the populace; at the same time the palace gates were thrown open, and the crowd rushing in, beheld the head of Marino Falleri weltering in blood.

Dr. Moore, in his Travels in Italy, throwing a rapid glance over the history of Venice, coincides pretty nearly with the preceding; but is not so correct or circumstantial. He represents Marino Falleri, the Doge, as 80 years of age, and incensed by an affront offered to his wife by a young Venetian at a ball, (by no means so probable a ground for revenge as the horrible passion of jealousy): in conclusion, he adds,

"The Doge, who hitherto had remained under a guard in his own apartments in the palace, was now brought before this tribunal of his own subjects (the Council of Ten, with some co-judges appointed for the occasion). He was dressed in his robes of office. It is thought he intended to deny the charge, and attempt a defence; but when he perceived the number and nature of the proofs against him, overwhelmed by their force, he acknowledged his guilt, with many fruitless and abject intreaties for mercy.—He was sentenced to lose his head. The sentence was executed in the place where the Doges are usually crowned.

"In the Great Chamber of the Palace, where the portraits of the Doges are placed, there is a vacant space between the portraits of Falleri's immediate predecessor and successor, with this inscription—

*'Locus Marini Falleri decapiti.'*

"The place intended for the portrait of Marins Fallerius, who was beheaded."

These are certainly fine materials for a tragedy; and we doubt not they will be rendered powerfully effective in the hands of the noble poet.

## ORIGINAL POETRY.

[By Correspondents.]

A PETER FINDARIC.

A printer's devil in a country town—  
His name? why whether he had one at all,  
I think is almost needless to set down—  
But say 'twas Peter Pull, or Sammy Haul—  
No matter which—  
Had got the itch;  
(Forgive me, ladies, for so foul a name.)  
A very merry, scratching, gray disease,  
Giving the fingers plenty of good game,  
But which had the misfortune not to please  
Our printer's devil,  
(Although such maladies as it  
For diabolic claws would seem most fit.)  
Chiefly because the lasses look'd unwell,  
And turning up their noses, seem'd to say,  
Sir, keep away,  
We do not like the instrument you play;  
It may be very airy, and all that;  
But pray excuse us, for we do not yearn  
From your fair hands to learn  
The Scottish fiddle gamut, sir—that's flat.

† Marino Samuto Storia civile de Duchi,  
p. 634.—Nangerio Storia Veneziana, p. 1041.

Annoy'd at this, he went to Doctor Slop,  
And from that learned apothecary's shop,  
He got a salve composed of things expedient  
All titillation to drive clean away;

What was the recipe I cannot say,  
But brimstone was, I'm sure, a prime ingredient.  
Being rubbed up, right skilfully no doubt,  
He paid his twopenny, and walked out  
Into the street,

Where he an old acquaintance chanced to meet.  
Pho! pho! exclaimed his friend, you smell  
Just as if newly 'scaped from hell;

What's this, what's this?  
Why, said the anointed man with knowing phiz,  
What is there strange in this affair, I pray?  
You know my trade, and in the name of thunder,  
Where is the wonder,

That I, a devil, should smell of brimstone? eh!  
W. F. P.

### TO MARION.

Thou hast gone to the realms of light—Marion,  
Thou hast gone to the realms of light;  
Thou hast mix'd with those saints, whose spi-  
rits like thine

Are made so bright, and so glorious to shine,  
As to dwell in their Maker's sight—Marion.

I will deeply mourn thy loss—Marion,  
I will deeply mourn thy loss;  
I will think of the time when you'd solemnly  
tell

Of the happy in heaven, and the wicked in hell;  
And like thee I will fly to the cross—Marion.

Thy counsels are dear to me—Marion,  
Thy counsels are dear to me;  
For they've made me with fortitude able to bear  
The hour of our parting—and likewise to fear  
The Power that has caught away thee—  
Marion.

I will meet thee in Heaven above—Marion,  
I will meet thee in Heaven above;  
There sorrow and sadness for ever will cease,  
And joy everlasting will brighten our peace,  
In the bonds of redeeming love—Marion.  
A. H.

### SONNET.

Written over the Death-Bed of an Idle Apprentice.  
See where he lies!—cold, wretched, dying man;  
A mass of loathsome filth and misery;  
Mischief and want still nestle hideously  
Beneath his sunken eyeballs; his short span  
Appears as finished, though but just begun:  
Low on the ground, victim of early crime,  
Like adieu crushed, he lies! I knew the time  
Ere vice and he their course together ran,  
Yet guiltless, when he laboured; poor, but gay,  
Death had for him no terrors; but, alas!  
Errors and follies, thick as unknown grass,  
Hurried his soul from Virtue's path away.  
Onward he went, 'spite of his parent's sighs,  
Beyond the hope of cure—and there he lies!  
W. F. P.

## SKETCHES OF SOCIETY.

LETTERS FROM PARIS.—No. IV.

Paris, Nov. 12th. 1820.

THE FRENCH JOURNALS.

The *Edinburgh Review*, in its article on English and French industry, commits a great mistake in estimating at only 1800 the number of journals which are every morning dispatched by post from Paris. The fact is,

that there is scarcely a single French journal which has not a circulation beyond the capital, to the amount of 1800. The *Constitutionnel* and the *Journal des Debats* have each from fifteen to sixteen thousand subscribers, of whom not more than one half are residents of Paris; and all the other journals publish from 4000 to 8000. Thus, the number of French journals daily circulated by the post, not only in France but in all parts of Europe, may be fairly estimated at from 24 to 25,000. The French journals being cheaper, and of a less complicated nature than the English, have certainly a great advantage in point of foreign circulation. The London papers are excellent for the inhabitants of London, who are sure to find in them every thing they can possibly wish for, from the court news down to quack advertisements; from the death of the most important person in the kingdom down to that of the obscurest citizen; but when once these enormous papers cross the channel, their first and last pages become totally useless, and only one half of their contents afford any interest to the readers of the continent. Besides, your post-office requires that newspapers should be paid for like letters and packets, while in France, and throughout all the north of Europe, journals are dispatched by the post at a very cheap rate; which enables the news dealers in Paris to send papers to all parts of Europe at almost as low a price as that at which they are originally published. This regulation does not exist in Spain, and hence arises the difficulty of procuring the Spanish journals, which are so interesting at the present moment.

Now that I am on the subject of the Paris journals, it will not perhaps be out of place if I give you a little sketch of each one in particular. The *Moniteur*, you know, is the most extensive of all, at least in size. It has made noise enough since the revolution, particularly during the reign of Napoleon, and even in its style it faithfully retraces the various colours of the times. Thus it may be considered as a curious historical monument; and complete files from its commencement, which are now rarely to be met with, are sold at very high prices. At present, the only remarkable features in this journal are, that it is the first to publish the proceedings of the government; and that it gives fuller reports than any other paper of the sittings of the Chambers. It also occasionally contains long literary articles. It is a curious fact, that M. Soro, the same gentleman who edited the *Moniteur* under the despotism of Buonaparte, still edits it under the constitutional government of the Bourbons. He formerly wrote against the royalists, and he now inveighs with equal facility against the Buonapartists, and even against the Liberals. On the last night of Buonaparte's reign, he went to bed a warm partizan of the Emperor, but next morning he rose a furious Bourbonite, and as good a royalist as any man in the kingdom. This kind of metamorphosis, however, was so extremely common at the time of the restoration, that it was thought nothing of. Though M. Soro's political opinions change as the wind blows, yet, to

do him justice, it must be confessed that he writes very good theatrical articles; and that with respect to dramatic principles, he is at least fixed and unalterable. The other writers for the *Moniteur* are persons of no celebrity, with the exception of those who occasionally furnish literary articles, and who are, for the most part, men of talent. However, these long articles are but ill suited to the vivacity of the French character; the generality of readers consider them dull and soporific, and they are perused only by the studious.

Under the reign of Napoleon, the *Journal des Debats* was the most respectable and the most extensively circulated paper in Europe; and its influence was such as no other public journal ever exercised. The following is a brief history of this journal. At the close of the revolution, when the republican government became more tolerant with regard to political and religious opinions that differed from the reigning system, a party of literary men (who, though very well-informed, were enemies to the new philosophy) joined together to establish a journal, in which they might venture to set forth an everlasting panegyric on the old regime. These malcontents, at that time, formed a kind of opposition, and excited a powerful sensation in the public mind. Their journal was the organ of all who had reason to be attached to the old government, or who had cause to complain of the republic; and as the editors possessed considerable literary talent, it speedily attained an extensive circulation.

When Buonaparte placed himself at the head of the government, he was well pleased to see a respectable journal labouring to restore the old regime, that is to say, all the abuses of power and privileges of the nobility, clergy, &c.; he favoured the journal, which shewed itself very willing to sound forth his praises. The consequence was, that those papers which opposed the principles of the *Journal des Debats* were suppressed; and throughout the imperial regime, this journal was distinguished above all other public prints. Through gratitude to their master, the editors carried their flattery to a pitch of meanness; and every despotic act of the imperial reign was pompously eulogized in the *Journal des Debats*, with the exception of that which Buonaparte exercised towards the journal itself, and which certainly was most odious. The paper had been established by persevering and industrious men, who had embarked all their capitals in the speculation. When, however, the prodigious success of the journal rendered it a source of considerable profit, Buonaparte, under some pretence or other, withdrew the property from the editors, and distributed it among a set of men, who, either from affection or interest, were devoted to his person, and whom he took this means of rewarding, without opening his purse. This gratuitous munificence produced to each of his creatures an annual income of 40,000 francs. Fortunately for the *Journal des Debats*, on its first establishment, its principal editor was the Abbé Geoffroy, the most original character imaginable. He had been a professor of rhetoric, and had served his

apprenticeship in criticism under the celebrated Freron, the enemy of Voltaire. The Abbé adroitly reserved as his domains the *feuilleton*, which still appears as the bottom of the journal. There he indiscriminately criticized theologians and authors, actors and actresses, who were obliged to purchase his good graces by splendid presents. After his death a closet was discovered filled with valuable articles of plate, by means of which actors, actresses, and authors, had bought the privilege of being exempt from the coarse censure which he contrived to deal out in an attractive and original style. There are periodical critics who live by dint of praising; but Geoffroy grew rich by his bitter condemnation; and he was dreaded as a power who could bring irretrievable ruin on the objects of his spleen. These, it is true, occasionally revenged themselves by caricatures and lampoons; and it may be said, that no species of celebrity was wanting to this most whimsical Abbé.

(Continuation in our next.)

#### To the Editor of the Literary Gazette.

LETTERS FROM A DISTINGUISHED PERSON\*  
AGE.—LETTER I.

Sir.—Though this is the first communication you ever received directly from me, yet I am certain you cannot be unacquainted with my name; and though I have not the pleasure of being personally known to you, you cannot be ignorant of my character, as the interests of others make it necessary for them to represent it. Trusting to your good nature, (may I add friendship?) I shall take leave, through the medium of your paper, to correct some of the absurd and very mistaken notions which are generally entertained regarding my person and conduct. Were these notions entertained by the vulgar and uneducated alone, I know not that I should trouble myself or you on the subject; but the light in which I am viewed by the higher ranks and educated classes of society, seems to require that, even for my own reputation, I should endeavour to set them right. The untutored Indian may be forgiven for dividing his attentions between the Good Spirit who supplies his wants, and the Evil Principle whose wrath he is anxious to deprecate.—but what shall be said for those who, in your country and in Europe, embody me with powers which belong only to OMNIPOTENCE, and invest me with attributes which are characteristic of HIM alone who formed, amidst other and innumerable worlds, “the earth which you inhabit, and all its gay creation.”

One of the most firmly-rooted prejudices among your countrymen is the doctrine of

\* We have received three letters from the distinguished personage whose signature is attached to this; and, as it is as well not to make the powerful one's enemy, we desire to propitiate his Excellency by inserting his correspondence. The details in our own employment are quite elated with the idea of their great namesake's contributing to our columns; and it is hoped, that the sentiments of the real “Archangel fallen” being on record, will put an end to all the *pseudo disabilities of pretended friends*.—Ed.

my *invisability*; and yet, in opposition to this, there is scarcely a peasant who will not attest that he has seen and often come in contact with me. They assert that I sometimes frighten them in the shape of a bush of furze or broom, or a stool of rushes; embody myself before them in the form of a magpie, a raven, or a toad; flutter round them in the shape of a bat; or stop up their passage in the likeness of a sow or a black dog. I am sometimes seen, if your legends are to be believed, as a tall man in black, but always with the addition of at least one cloven foot; and your judicial records bear witness, as far as human testimony can go, that when I am disposed to be naughty, I solace myself, (no great proof of my taste, you will say) with shrivelled lads, whom age, infirmity, or ill nature, have rendered obnoxious to their village companions. Many of your worthies of a former age have themselves related in the frenzy of a distempered imagination, how they wrestled with, and fairly beat me off, *in propria persona*; and one of your greatest reformers (Martin Luther) has attested the mighty conflicts we have had together, in which, according to custom, he always came off victorious.

It is not necessary, at the present day, to prove that a spirit, such as I am represented to be, cannot be literally and tangibly seen and felt. The very idea of a spirit necessarily excludes that of material texture and form; and notwithstanding the testimony of those who have asserted that they have seen and handled me, I must say, that I never had, nor indeed could have, any material frame of bones and sinews, which should be perceptible to the human eye, or palpable to the human touch. In this sense I always have been, and always shall be, *invisible*. But though not visible in any determinate form, I am nevertheless to be seen, mixing daily in all the transactions of life; and my invisibility as a spirit does not hinder me from embodying myself, so as my presence may be detected, and my features recognised, in the persons of my friends who lend themselves to me for this purpose, by the most careless observer. Though I have long given up the visible possession of the bodies of my followers, for that more delicate contrivance which I possess over their minds, yet is my presence not less certainly to be discovered; and though it is not the custom now for even my most devoted disciples to barter themselves to me for money, which might vanish from their sight, the evidence of their being wholly mine exists in deeds more binding than a parchment traced in blood—the exhibition of passions unrestrained by reason, and of conduct not regulated by religion.

There is not a kingdom or a court—a city or a village—a family or an individual, in which, or over whom, I have not occasionally some influence. I possess more than one seat in the British Parliament, though I am not formally elected; sometimes carry a question, though my name does not appear in the list of the majority; not unfrequently assist at the privy council; and can boast of

having been more than once on the bench of bishops. In the supercilious looks of the churchmen, as well as in the affected humility of the dissenter, the lineaments of my countenance may often be distinctly traced. I am sometimes to be seen beneath the broad brimmed hat of the Quaker,—and all the young men about town must have frequently recognized me in a more alluring form—peeping slyly from under a straw bonnet, or enveloped in the folds of a silk petticoat.

It is I who distort the features into anger, and mould the countenance into the display of contempt. I stiffen the muscles into the expression of revenge, and prompt the action which sets a mark upon the countenance of the murderer. I inspire the miser with his insatiable thirst after riches, to the exclusion of every nobler thought; and I urge the debauchee to the excesses which terminate in the ruin of his health and his fortune. I preside over all the assemblies which meet, under different names, to kill time, and pass unimproved, with less than childish foresight, those moments which were destined as their probation for—(I almost shudder to write the word)—ETERNITY!

Another strong and firmly rooted prejudice of your countrymen is, that I am an object of fear; and this prejudice is so strongly impressed on their minds, that I almost despair of overcoming it. No sooner do your children see the light, and are capable of distinguishing one articulate sound from another, than I am presented to them under a thousand shapes, all calculated to inspire terror; and though I am thus very useful in the nursery, and acquire an ascendancy there which all the education, and all the scenes of future life seldom surmount; yet I feel somewhat reluctant at gaining this advantage, at the expense of being looked upon as an object of affright. Fortunately for me, however, the dark names and fearful shapes in which the nurses of your country exhibit me to your children, are only attributed to me metaphorically, by persons ignorant of my person, my essence, or my nature: and they are thus far useful for the purposes I am supposed to have in view, that they retain the infant mind in due subjection to my sway, till heedless young rushes, with open arms, from these dark illusions, to attractions more suited to my views, and more captivating to theirs. No, the stately port, the majestic air, the alluring graces of one who once was an angel of light, are not yet so obscured, but that, were it permitted me to appear, my followers need not be ashamed of their leader. I hold not out to my friends the thorny paths of unmeaning duty, or the hard to be acquired habits of self-denial,—but the smooth and flowery and unconfined road, that leads to unrestrained pleasure, and to joys which allow no ill-timed reflections to interrupt their current. It is but a poor compliment to a spirit such as I am conceived to be, to fancy that his purpose is only to frighten clowns and children; and I conclude at present with observing, that, for one subject acquired in this manner, I have thousands who devote themselves to my ser-

vice when I approach them in the fascinating smile of female loveliness, or assail them in the deep interests of the gaming table; and tens of thousands more own my sway, when allured from what your philosophers call their true interests and lasting repose, they follow, with exclusive pursuit, the tinsel follies of Time, which lead them to the ruin of their hopes, and then—leave them for ever. I am, Sir, your humble servant and sincere friend.

SATAN.

## THE DRAMA.

**DRURY-LANE.**—On Monday Mr. Wallack, who has been some time in America, signalized his return to this theatre, by performing the part of Hamlet. His figure, face, and manner, were well suited to the character; but it wanted those qualities, without which the Prince of Denmark is nothing—fine intellect, discrimination, and genius. Mr. Wallack omitted few of the traditional starts and gestures which in ordinary hands haunt the character, as their looms adorn old families; but he was never great, never rose above the level of appropriately graceful action and pleasing declamation. From his former efforts we might have anticipated that his danger would have been that of too much animation; but on the contrary, he utterly forgot his own advice, “be not too tame neither;” and was lamentably unimpassioned in many of the most exciting scenes. Upon the whole, mediocrity was stamped in every lineament; and we shall look to recover the traces of an actor, to whom we were rather partial, in some cast more congenial to his powers than Hamlet.

A tolerably humorous farce, called the Wild Goose Chase, has been performed nightly, since Tuesday.

**COVENT GARDEN.**—*The Iroquois, or Canadian Basket Maker.*—This silly piece must have been generated by some melo-dramatic wight; for it is almost too bad for even a bad farce-writer. Our gentle readers know the story of the Marquis and the basket-maker, whom the Indians forced to change their relative positions in society, from the preference which these untutored savages gave to the *Utile* over the *Dulce*. This is the foundation of the Iroquois, in which there is nothing of either the *utile* or *dulce*. The scene opens with one of the *Chinoise ombres* on a large scale, in which the Indians row along the St. Lawrence towards Montreal, where their chief (a European in disguise) goes to look for a son whom he has lost sixteen years, or avenge himself on the French colonists. This son is a basket-maker on one of the isles, and happens to be fond of the governor's daughter, who happens to be destined for the Marquis by her papa. The Iroquois break in upon the nuptial treaties and intrigues, and show their predilection in respect to the prisoners, as above recorded. The puppet-show work is repeated; the savages threaten, dance, and sing; and the *dénouement* would have taken place, only the audience, owing to some accountable circumstance, had been already so

delighted with the piece as to think they were not entitled to have any more of it for the money paid at the doors. They accordingly not only refused to hear it out, but, as if overtaken by a sense of their greediness and injustice in having received so much, they returned a good deal of noise and clamour of their own free motion. Having then balanced accounts, the curtain fell on a very contemptible drama, the fate of which, *Jeune* in all his foppery, Blanchard in all his drollery, nor Durusset in all his melody, could not render doubtful one moment. The late sweet boy, Longhurst, introduced the air, “Fly all away,” of which we expressed our liking in the *afterpiece* *precedingly* &—

## VARIETIES.

It is stated by an Indian Missionary, that the troublesome disorder called a *whitlow*, is effectually cured in a very short time by the application of a poultice made of the roots of the common blue violet.

*Anagrams.*—A wag in the Morning Chronicle has made out the following anagrams:—“Majochi,” (which, by the way, is not the celebrated witness's name, but one like it given by sponsorship newspapers:—“Jachino.”—“In Carlton House,”—“No Caroline then.”—“Castlereagh,”—“Get real cash,”—and “Intrigue,” “I get ruin.”

In removing the library and clearing away the floor and book-cases that have so long encumbered the Lady Chapel of Exeter Cathedral, a discovery has been made of two ancient tombs. The sculpture of both is early. They are placed in Gothic niches of much later date; and appear to be the lids only of sarcophagi, and to have been removed from some other station to that which they now occupy. The material is the Purbeck marble. The most ancient of them is the figure of a prelate with a depressed nose, a beard and mustachios; the first two fingers of the right hand pointing upwards, in the act of benediction; in the left hand a crozier. In spandrils, above the head, are each side cherubs. The feet of the figure and the crozier rest on two birds, which terminate in the centre with a single head, the face of which is human. The sides and ends are wrought in wide flutes, without fillets, like the fluting of the Doric column. The other tomb is likewise the figure of a prelate, and is carved in good style, and in much higher relief than the former. The arms and hands are placed in easy and natural positions on the body, over the staff of the crozier; the head or crook is defaced. The mitre of this figure is of a more recent form than the other; the feet rest on a chimæra, carved in a style of spirit and beauty that would do honour to a period of more refined art. The head is that of a wolf, terminating the body of a serpent, branching off on each side, and scrooping down the sides of the lid, and finally branching off into rich foliage, tastefully arranged by the feet of the figure, between which the head is seen.

At a late assizes in Limerick, a boy was brought forward as a witness for the prosecution in a case of murder. He appeared so

ming and so ignorant, that the judge, (Socitor-General Bushe) thought it necessary to examine him as to his qualifications for a tress, when the following dialogue took place:

Q. Do you know, my lad, the nature of oath? A. An oath! no.

Q. Do you mean to say that you do not know what an oath is? A. Yes.

Q. Do you know any thing of the consequences of telling a lie? A. No.

Q. No! What religion are you of? A. A Catholic.

Q. Do you never go to mass? A. No.

Q. Did you never see your priest? A. Yes.

Q. Did he never speak to you? A. Oh! es.

Q. What did he say to you? A. I met him in the mountain one day, and he bid me old his horse and be d—d to me.

Judge. Go down: you are not fit to be worn.

It is only proper to add, that the boy appeared to be more knave than fool, and that his ignorance was in all probability paid for by the defendant.

It is pretty generally known, that Mr. Socitor General Bushe is to succeed to the Chief Justiceship of King's Bench or of Common Pleas in Ireland, as soon as either comes vacant. Some one in his presence was highly, and most deservedly, praising Chief Justice Downes, who, he asserted, possessed every virtue under heaven. "No," replied Mr. Bushe, "I am sorry to say he does not possess the virtue of resignation."

A letter from Bordeaux says:—"A few days ago were discovered, amongst the ruins of the castle of Castelmain, in Medoc, several silver coins or *Demi-gros* of Aquitaine, which exhibit on one side the effigy of the Prince of Wales, in a ducal attire, armed with a sword, standing under a Gothic canopy; and on the reverse, two *fleurs de lys*, and two leopards, symmetrically separated by a full cross, marked with six points, indicative of the value of the coin. Round the portrait of the Prince is the legend—Ed. Po. Ns. Rso. Aul. B. (*Eduardus primogenitus egis Anglie, B.*) and on the reverse—ACIR. *ancens (Aquitania Princeps).*

*Chios, 26th, July.*—The great Greek colony here continues to flourish, in spite of all obstacles. The branches of knowledge at present taught are natural philosophy and mathematics, the Belles Lettres, the French language, drawing, &c. and it is proposed to found a professorship of Italian music. The drawing master is a young Frenchman of the name of Mangoussae, a pupil of the Normal school at Paris. The number of students is now 476, viz. 400 Greeks and 76 foreigners. Among the latter are three Americans, who are studying the re of Homer on the spot which boasts of being the birth-place of the father of poetry.

ISAAC'S CHURCH AT ST. PETERSBURG.

*Petersburg, 29th September.*  
The first four of the granite columns which

are to be used in the construction of Isaac's church, have lately been brought hither, by water carriage, from Finland. They are of vast size; the shaft of each being eight fathoms in height, consisting of a single piece. Thirty-six similar columns will adorn the edifice. The whole building will be colossal. Under the pediment, which will be of marble slabs, there are to be thirty-two stores to warm the church in the winter: being distributed by means of pipes under the pavement. Each of the above mentioned pillars weighs, in its present state, 13,000 pounds (calculating 36 lbs. English per foot). They are polished by the aid of a steam engine.

Princess Anna Narischkin, who died about half a year ago at a very advanced age, left in her will the sum of 150,000 roubles for the benefit of the establishments for the education of youth, which are under the protection of her Majesty the Empress Maria. Count Romanow (the Chancellor of the empire, nephew and testamentary executor as well as sole heir to the deceased), has now paid this sum into the hands of her Majesty, who has placed it out at interest for ever; for five establishments, viz. the Academy for the Education of Noble Ladies; the schools of the order of St. Catherine at St. Petersburg and Moscow; the Girls School of the Military Orphan-house, and the School for the Deaf and Dumb.

#### To the Editor of the Literary Gazette.

Sir,—The steam boat has sufficiently exhibited its power of making way through a rough sea. But it is desirable to know whether any expedient has been conceived to remedy the sudden carrying away of one of the outer wheels or paddles in a gale—any means of sustaining the impulse of the vessel, so as to prevent her broaching to at once. The time taken for hoisting a sail would probably be too long to put the vessel in a position of safety. I wish to have the question answered by any of your engineer correspondents.

I am, sir, yours,

FABER.

#### To the Editor of the Literary Gazette.

Sir,—About sixty years ago, the idea of making pearls by a peculiar process in the oyster-shell, was general, and Buffon is said to have actually presented to the French King, some specimens of considerable size, though ill coloured, which he had manufactured by pricking the shell while the animal lived. Have any attempts in later years been made? Or are we indebted for any of our modern pearls to this practice in secret?

I am, &c.

MELMOTH.

### LITERARY NOTICES.

The particulars of Kotzebue's voyage, respecting which several epistolary communications appeared in the Literary Gazette last year, are about to be published in Germany. The work, we learn, will form a large

quarto volume, and be accompanied by plates and charts.

We hear that a new volume of poems, by John Clare, the Northamptonshire Peasant, is in the press, and expected to appear about Christmas. Mr. Scriven is engraving a portrait of the author, from a beautiful painting by Milton.

*Contents of Journal des Savans, October.*

### TO CORRESPONDENTS.

\* \* \* The accounts of the Northern Expedition, the Chert, and the variety of, we trust, attracting as well as original articles, with which we are enabled to enrich this Number of the Literary Gazette, have obliged us to curtail some of our usual heads, and to postpone several matters intended for publication.

The annual Volumes and Quarterly Parts of the Literary Gazette, are to be had through every Bookseller in Town and Country. The Third Part, for 1820, to September, was recently published.

ERRATA.—In our Paris Letter, III, the name of *Figier* should be *Figée*; in the Literary Notice, *Soltan* should be *Soltan*.

**Peruvian Costumes, by Orlovski.**  
THE PUBLIC are respectfully informed, that the ORIGINAL PERUVIAN COSTUMES, drawn on Stone by the celebrated Russian Artist, Orlovski, are introduced into this country by a Gentleman just arrived from St. Petersburg. Artists, amateurs, and collectors of National Costumes, who wish to have the Original Work, are requested to ask for it under the French title, "Costumes Peruvians," published at St. Petersburg. The first number, containing 6 plates, is just issued, price 12s. coloured; a few impressions, plain, may be had, price 12s. Sold by Roosey and Sons, Broad Street, Exchange; Colnaghi and Co. Cockspur Street; and the principal printellers. Orlovski's other Lithographic Works, consisting of Characteristic Scenes in Russia, &c. &c. many of which are on a large scale, may be seen on application.

**BOOKS PUBLISHED THIS DAY.**

Second edition, in 4 vols. 12mo. price 11. 8s. boards.  
**CLAN-ALBIN:—A National Tale.**  
A nation famed for song and beauty's charms;  
Zealous, yet modest; innocent, though free;  
Patient of toil; serene amidst alarms;  
Inflexible in faith; invincible in arms!—*Bentley.*  
Printed for Longman, Hurst, Rees, Orme, and Brown; Black, Parry, and Co.; H. Colburn; and Thomas Underwood, 22, Fleet Street, London; Maccready, Skelly, and Mackenzie, Edinburgh; and John Cumming, Dublin.

**Hall on the Mimosas—Second Edition.**  
In 8vo. price 7s. boards.  
**A DESCRIPTIVE, DIAGNOSTIC, and PRACTICAL ESSAY ON DISORDERS OF THE DIGESTIVE ORGANS AND GENERAL HEALTH,** and particularly on their numerous Forms and Complications, contrasted with some acute and insidious Diseases; being an Attempt to prosecute the Views of Dr. Hamilton and Mr. Abernethy, and a second edition of the Essay on the Mimosas, with Additions. By MARSHALL HALL, M.D. F.R.S. &c. &c.  
Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, by the same author.  
**CASES of a Serious MORBID AFFECTION,** occurring principally after Delivery, Miscarriage, &c. in 8vo. 4s. sewed.  
On **DIAGNOSIS,** in Four Parts.—The Phenomena of Health and Disease.—Of the Diseases of Adults. Of Local Diseases.—Of the Diseases of Children, in 8vo. 6s. boards.

**Mr. Mill's Crusades. New Edition.**  
3d edition, in 2 vols. 8vo. bds. price 11. 4s.  
**THE HISTORY OF THE CRUSADES,** for the Recovery and Possession of the HOLY LAND. By CHARLES MILLS, Esq. author of "A History of Muhammadanism." Printed for Longman, Hurst, Rees, Orme, and Brown, London.  
"A History of the Crusades was great desideratum in English Literature. Mr. Mill's production, for intelligence, compression, arrangement, and clearness, approaches very nearly to what we consider the requisites of perfection in this species of composition."  
*Literary Gazette, No. 194.*  
"His (Mr. Mill's) lucid and valuable history."  
*Edinburgh Review, No. 67.*

On Monday will be published,  
1.  
**NARRATIVE OF THE OPERATIONS** and RECENT DISCOVERIES within the PYRAMIDS, TEMPLES, TOMBS, and EXCAVATIONS, in EGYPT and NUBIA; and of a Journey to the Coast of the Red Sea, in search of the ancient Berenice, and another to the Oasis of Jupiter Ammon. By G. BELZONI. 4to. with a portrait, 2s. 2s.  
2.  
**FORTY-FOUR COLOURED PLATES,** Illustrations of the Researches and Operations of G. BELZONI in EGYPT and NUBIA. Folio, 61. 6s. Printed for John Murray, Albemarle Street.

**THE MODERN PRACTICE OF PHYSIC,** exhibiting the Characters, Causes, Symptoms, Prognostics, Morbid Appearances, and Improved Method of Treating the Diseases of all Climates. By ROBERT THOMAS, M.D. Sixth edition, revised and considerably enlarged by an Addition of much important Matter, as well as by an English Translation of the Formulae of Prescriptions, rendering the Work thereby of general utility. Printed for Longman, Hurst, Rees, Orme, and Brown; Cadell and Davies; Higley and Son; J. Callow; E. Cox and Son; Baldwin, Cradock, and Joy; T. and G. Underwood; Anderson and Chase; G. and W. B. Whittaker; and Adam Black, Edinburgh.

**Important Works.**  
Recently published by Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

The Pleasures of Religion, in Letters from Joseph Felton to his Son Charles. Fourth edition, with Additions, 11. 6d. boards.  
Lorenzo; or the Tale of Redemption. By J. Baby. Third edition.  
"This Poem is the production of a young author who possesses a cultivated mind, a correct taste, and a practical ear; and who has the advantage of the whole being directed by pure sentiments. The Reader will discover many passages in the best manner of Lord Byron, and it is the irregular Stanzas, and flowing melody of its structure, a strong resemblance to Walter Scott's Lay of the Last Minstrel; but in the subject, the design, and the impression it may make, it is greatly superior to any thing the above authors have hitherto written."—*See Evangelical Magazine, Feb. 1820.*  
York House; or Conversations in a Ladies' School, principally founded on Facts. By Anna Kent. Second edition, corrected, 3s. 6d.  
"Young Ladies, who have left School may read the volume with pleasing reflections on the years that are passed, and we apprehend that the Superintendents of Female Boarding Schools, especially the younger of them, may derive much assistance from it, in their arduous but honorable labours."—*Evening Mag.*  
Requel to York House; or Friendship's Memoirs, in a Series of Letters, containing Advice, and Animating Memoirs, addressed to Young Ladies. By Anna Kent. 3s. 6d. boards.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 202.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### BELZONI'S WORK ON EGYPT.

*Narrative of the Operations and recent Discoveries within the Pyramids, Temples, Tombs, and Excavations, in Egypt and Nubia; and of a Journey to the Coast of the Red Sea, in search of the ancient Berenice; and another to the Oasis of Jupiter Ammon.* By G. Belzoni. London, 1820. 4to. pp. 483. Plates separate, 44 in number, at the price of Six Guineas!

There is a character in one of our modern comedies, whose prominent merit it is to be everlastingly in action, and calling out to those around him to "Push on; keep moving!" We frequently fancy that we bear some resemblance to Young Rapid; for we are whirled about all quarters of the world with inconceivable speed...now freezing at the Pole, now burning at the line; now savage, now civilized in our range; now among the Iroquois, now in Paris; now at the Brazils, now in Africa (inasmuch that our page, like Buck, puts a girdle about the earth in forty minutes); and we are sure that if we could collect our crowd of readers about us bodily, we should be jogging them prodigiously with our elbows, and awailing out "Push on, push on!" and "Keep moving!"

Yet with all our celerity and locomotion, we cannot so far overtake the bulky publication of which the title-page heads this column, as to pronounce entirely upon its merits; and we shall therefore refrain from doing so till we have had time to compare it with preceding works on the same subjects. We have however seen enough of it to be able to state that it is, *per se*, very curious and attractive performance, both with reference to antiquities and to the modern manners and customs of the people among whom the traveller pursued his researches.

These researches occupied the years 1815, 16, 17, 18, and 19; and seem to have been prosecuted with infinite spirit and perseverance, though unfortunately left incomplete.

In consequence of the author's being driven from Egypt through the jealousy and intrigues of parties adverse to him and his aims.

As the public is generally desirous of VOL. IV.

knowing something of the person whose labours interest it, we may state that Belzoni in his Preface (after allowing due praise to Denon, Hamilton, and Burckhardt), informs us that he is of a Roman family, and a native of Padua; that he was driven from his country, where he intended to become a monk, by the troubles in 1800, since which time he has travelled much and met with many vicissitudes. In 1803 he came to England, married, and resided here nine years. He then, taking his wife with him, went to Portugal, Spain, Malta, and finally to Egypt in 1815. The fruits of his toils in discovering antiquities, in opening two of the pyramids of Ghizeh, several tombs of kings at Thebes (one supposed to be that of Psammetichus, an Egyptian monarch who lived nearly 400 years before Christ), and also the temple of Yhsambul, near the second cataract of the Nile,—besides the journeys to the coast of the Red Sea, and the Western Elloah or Oasis, he now submits to the judgment of his contemporaries, certainly at a period when travel and information has qualified many of them to decide with justice on his merits and errors.

There is an ample table of contents, and a lithographic portrait of the author by H. Mandel prefixed to the volume. It affords a good idea of his bearded countenance and remarkable person;—for Belzoni is among the giants of our times, being several inches above six feet in height, and proportionally stout and well formed. We have been told, and it reflects the more honour upon him and his present station, that in his earlier days in London, this athletic strength and noble appearance enabled him to exhibit in a suitable way at Astley's Amphitheatre—the compound Apollo and Hercules of the stage; and we dare to say that he found his imposing stature of still greater value to him among the Fellahs, Bedouens, Arabs, and Nubians of the East. But it is now time to revert to his narrative.

Belzoni's first journey occupies about one third of the volume. He was absent from Cairo five months and a half, and ascended the Nile to the second cataract. In this expedition he secured the head of the Young Memnon at Thebes (now in the British Museum), and brought it back to Alexandria; made some progress in removing the sand from the Temple of Yhsambul; and obtained by excavation several valuable specimens of antiquity at Carnak.\* But it will afford our readers a more perfect notion of

\* It is a singular co-incidence, that our present Number contains an account of some remarkable antiquities in Brittany (see review of Mrs. Stothard's Tour) which are known by the same name—Carnac. What relation existed between the Egyptians and the Celts or Gauls? En-

his operations to follow his route, and inter-mingle the quotation of what is most worthy of notice with brief explanatory comments as we go on.

At Cairo Belzoni met Burckhardt; and he speaks very warmly of that kind, candid, and disinterested individual, who imparted much useful instruction to him. He also tells a longish story of a hydraulic project with which he entertained Mahomet Pasha, and which ended abortively. His other details respecting what happened at Cairo, are entertaining, but have no particular recommendation to extract. Having resolved to ascend the Nile, he relates the circumstances of his intercourse with Mr. Salt; and seems to wish it to be inferred that his labours were more independent of that gentleman than, on his own showing, we think they really were; for Mr. Salt's instructions to him, and supplying him with money, make him very clearly an agent rather than a principal.

The first subject of antiquarian interest that we come to is the Memnonian Bust. It is thus described in the Instructions added to, given to Belzoni at setting out.

"Having obtained the necessary permission to hire workmen, &c. Mr. Belzoni will proceed direct to Thebes. He will find the head referred to on the western side of the river, opposite to Carnak, in the vicinity of a village called Gornou, lying on the southern side of a ruined temple, called by the natives Kossar el Dekaki. To the head is still attached a portion of the shoulders, so that altogether it is of large dimensions, and will be recognized,—1st, by the circumstance of its lying on its back with the face uppermost—2dly, by the face being quite perfect, and very beautiful—3dly, by its having, on one of its shoulders, a hole bored artificially, supposed to have been made by the French for separating the fragment of the body—4thly, from its being a mixed blackish and reddish granite, and covered with hieroglyphics on its shoulders. It must not be mistaken for another, lying in that neighbourhood, which is much mutilated."

Accordingly our traveller found it: he tells us on his arrival at Thebes.—

"As I entered these ruins, my first thought was to examine the colossal bust I had to take away. I found it near the remains of its body and chair, with its face upwards, and apparently smiling on me, at the thought of being taken to England. I must say, that my expectations were exceeded by its beauty, but not by its size. I observed, that it must have been absolutely the same statue as is mentioned by Norden, lying in his time with its face downwards, which must have been the cause of its preservation. I will not venture to assert who separated

the bust from the rest of the body by an explosion, or by whom the bust has been turned face upwards. The place where it lay was nearly in a line with the side of the main gateway into the temple; and, as there is another colossal head near it, there may have been one on each side of the doorway, as there are to be seen at Luxor and Carnak."

Belzoni left Boolak on the 30th of June, accompanied by his Amazonian wife, who when occasion required, stood forward pistol in hand as boldly as her husband, to resist the natives, James Curtin an Irish servant, an interpreter, and a Janizary. The navigation up the Nile is sufficiently known. At Ghout they visited Ibrahim Pasha, the son of Mahomet, of whom the following traits are recorded.

"Ibrahim Bashaw has lately been the terror of the people. When an unfortunate sulpirist was brought before him, after some few questions, he sent him to the Cady to be judged. This was the signal for taking him to a particular cannon, to the mouth of which he was tied; and it was then fired off, loaded with a ball, so that the body was scattered about in pieces at a considerable distance. In the case of two Arabs, who had killed a soldier, not without provocation, this Bashaw had them fastened to a pole, like two rabbits on a spit, and roasted alive at a slow fire. yet this man is now heir to the Government of Egypt on the death of Mahomet Ali."

On the 18th of July they reached Dendersa, which Belzoni very cursorily examined, being anxious to proceed to his destination, Thebes, where he arrived on the 22nd, and landed at Luxor on the opposite bank.

The Cashef of Erments, the Governor of the Fellalis in this province, like all Turks, threw many obstacles in the way of his undertakings; but by management and perseverance he finally overcame them, and got men to work to remove the bust, which the natives called "*Cophany*." They commenced on the 27th, and by getting it towards the river at the rate of from 50 to 400 yards a day, it was safely placed in a situation ready to be embarked, by a singular coincidence, on the 12th of August, our king's birthday.

Having accomplished this Herculean toil, Belzoni went to explore the site of a sarcophagus, which Drouetti the French Consul had discovered, and given him leave to remove if he could find means. The account of this gives so generally applicable a view of the tricks of the natives, that we copy it from the narrative.

"Next day, in the morning, according to my wish, some Arabs came to conduct me to the cave, where the sarcophagus was which Mr. Drouetti had attempted to take out, and had given to me as a present, if I could get it. I was conducted into one of those holes, that are scattered about the mountains of Gournou, so celebrated for the quantities of mummies they contain. The Janizary remained without, and I entered, with two Arabs and the interpreter.

"Previous to our entering the cave, we took off the greater part of our clothes, and, each having a candle, advanced through a cavity in the rock, which extended a considerable length in the mountain, sometimes pretty high, sometimes very narrow, and without any regularity. In some passages we were obliged to creep on the ground, like crocodiles. I perceived, that we were at a great distance from the entrance, and the way was so intricate, that I depended entirely on the two Arabs, to conduct us out again. At length we arrived at a large space, into which many other holes or cavities opened; and after some consideration and examination by the two Arabs, we entered one of these, which was very narrow, and continued downward for a long way, through a craggy passage, till we came where two other apertures led to the interior in a horizontal direction. One of the Arabs then said 'This is the place.' I could not conceive how so large a sarcophagus, as it had been described to me, could have been taken through the aperture, which the Arab now pointed out. I had no doubt, but these recesses were burial-places, as we continually walked over skulls and other bones: but the sarcophagus could never have entered this recess; for it was so narrow, that on my attempt to penetrate it, I could not pass. One of the Arabs, however, succeeded, as did my interpreter; and it was agreed, that I and the other Arab should wait till they returned. They proceeded evidently to a great distance, for the light disappeared, and only a murmuring sound from their voices could be distinguished as they went on. After a few moments, I heard a loud noise, and the interpreter distinctly crying, '*O mon Dieu! mon Dieu! je suis perdu!*' After which, a profound silence ensued. I asked my Arab, whether he had ever been in that place? He replied, 'Never.' I could not conceive what could have happened, and thought the best plan was to return, to procure help from the other Arabs. Accordingly, I told my man to show me the way out again; but, staring at me like an idiot, he said he did not know the road. I called repeatedly to the interpreter, but received no answer: I watched a long time, but no one returned; and my situation was no very pleasant one. I naturally returned through the passages, by which we had come; and, after some time, I succeeded in reaching the place, where, as I mentioned, were many other cavities. It was a complete labyrinth, as all these places bore a great resemblance to the one which we first entered. At last seeing one, which appeared to be the right, we proceeded through it a long way; but by this time our candles had diminished considerably; and I feared, that, if we did not get out soon, we should have to remain in the dark: meantime it would have been dangerous to put one out, to save the other, lest that which was left should, by some accident, be extinguished. At this time we were considerably advanced towards the outside, as we thought; but to our sorrow we found the end of that cavity, without any outlet. Convinced that we were mistaken in our con-

jecture, we quickly returned towards the place of the various entries, which we strove to regain. But we were then as perplexed as ever, and were both exhausted from the ascents and descents, which we had been obliged to go over. The Arab seated himself, but every moment of delay was dangerous. The only expedient was, to put a mark at the place out of which we had just come, and then examine the cavities in succession, by putting also a mark at their entrance, so as to know where we had been. Unfortunately, our candles would not last through the whole; however, we began our operations.

"On the second attempt, when passing before a small aperture, I thought I heard the sound of something like the roaring of the sea at a distance. In consequence I entered this cavity; and as we advanced the noise increased, till I could distinctly hear a number of voices all at one time. Alas! thank God, we walked out; and, to my small surprise, the first person I saw was my interpreter. How he came to be there! I could not conjecture. He told me, that, as he proceeded with the Arab along the passage below, they came to a pit, which they did not see; that the Arab fell into it, and it falling put out both candles. It was then that he cried out, '*Mon Dieu! je suis perdu!*' as he thought he also should have fallen into the pit; but, on raising his head he saw at a great distance a glimpse of the light, towards which he advanced, and then arrived at a small aperture. He then stepped away some loose sand and stones to widen the place where he came out, and went to give the alarm to the Arabs, who were at the other entrance. Being all concerned for the man who fell to the bottom of the pit, it was their noise that I heard to escape. The place by which my interpreter got out was instantly widened; and in the confusion the Arabs did not regard before me see that they were acquainted with this entrance, and that it had lately been shut up. I was not long in detecting this scheme. The Arabs had intended to show me the sarcophagus, without letting me see the way by which it might be taken out, and then to stipulate a price for the secret. It was with this view they took me such a way round about.

"I found that the sarcophagus was not really a hundred yards from the large entrance. The man was soon taken out of the well, but so much hurt in one of his hips, that he went lame ever after."

Waiting for a boat from Cairo to carry away the Memnon, Belzoni determined to extend his voyage in the interior, up the Nile. He accordingly set out, on the 20th of June on the 18th of August; on the 20th at El fu; and on the 22d at Ombos. At El fu the ruins of a superb temple, of which the author says—

"This temple may be compared with the of Tenryn in point of preservation, and superior in magnitude. The propylæon is the largest and most perfect of any in Egypt; it is covered on all sides with colossal figures of intaglio relievato, and contains several

\* This is any reference to Pharus? Ed.

partments in the interior, which receive light by square apertures in the side. We have here one of those curious subjects of inquiry which, in my opinion, have never yet been explained. These square holes, or windows, viewed from the inside of the chambers, appear to have been made for the purpose of giving light to these apartments, or to hold some particular ornaments or emblems, placed in them occasionally on festival days; consequently, it might be concluded that they were made at the same time with the building. Yet, on the outside, these very windows come in contact with the colossal figures which are sculptured on the walls; and part of these appear as if cut off where the windows have been made: so that, from the appearance on the outside, it is to be inferred, that these apertures were formed after the building was finished. For my own part, I think they were cut long after that period, and made to give light to the apartments, which were inhabited by people of a different religion from those who built the temple. The pronas are very wide, and the only one to be seen in Egypt in such perfection, though completely encumbered with Arab huts. The portico is also magnificent; but, unfortunately, above three-fourths of it covered with rubbish. Through some holes in the upper part of the sekos I entered the inner apartments: but they were so obstructed, that I could not proceed far. The Fellahs have built part of their village on the top of it, as well as stables for cattle, &c. The temple is surrounded by a high thick wall, which extends from each side of the propylæon, so as to inclose the whole building. Not only the temple, but every part of the wall, is covered with hieroglyphics and figures. On the side wall of the pronas I observed the figure of Harpocrates which is described by Mr. Hamilton, seated on a full-blown lotus, with his finger on his lips, as in the minor temple at Tenya; and on the west side of the wall is the figure of an unicorn. This is one of the few figures of beasts I observed in Egypt. The elephant is to be seen only in the entrance to the temple of Isis, in the island of Philæ: he horse, as a hieroglyphic, is on the northern exterior wall at Medinet Aboo; and the anubopard is on the wall of the sekos of theoleonium, and on the back of the temple at Ermentia."

The boat got to Assouan on the 24th.

(Continuation in our next.)

Poems. By Thomas Gent. 12mo. pp. 155. London, 1820.

Having formerly put our opinion of Mr. Gent's poetical powers upon record, we are released from the duty of reiterating it upon the present occasion; and especially as several of the pieces here collected together have, under other forms, already received the humble meed of our applause, as well as the sanction of the most judicious of our contemporaries. The volume now published is a very varied and pleasing miscellany, in which the author moves from grave to gay with easy transition, displaying his com-

mand over both styles, and alternately charming us with sweet versification, and tickling our fancy with humorous facetiousness. There are more than fifty subjects, none of them of any great length; and therefore we speak of the work, not as amounting to the heights of Parnassus, but with reference to the character at which it aims, in playing on a spot of some elevation—on the brow of the hill, "the amusements of the leisure hours of a man whose fortune will not favour his inclination to devote himself to poetry." In this point of view we cannot but admire the versatility of talent, the gracefulness in the serious, and the vivacity in the comic, which the writer has shown; and we shall endeavour to impress these sentiments upon our readers by quoting such of the poems as are most original, and best calculated to afford a fair criterion of the merits of the whole. It should also be our task to mention what defects occur to us;—but in truth we have so little fault to find with Mr. Gent, in the station where he claims a place, that we should but waste our time in minute criticism were we to enter upon the discussion. We could rather wish him to attempt a bolder flight; and then our closest endeavours shall not be wanting to bring him to a proper sense of any blunders he may commit. For the present, his modest pretensions and unassuming manners would disarm censure, even if he had not succeeded in setting his muse above the praise with which he assures us he will be contented.

In quoting these poems we cannot do better than commence with the introductory address.

"To sweet in boyhood's visionary mood,  
When glowing fancy, innocently gay,  
Flings forth, like notes, her bright aerial brood,  
To dance and shine in Hope's prolific ray:  
'Tis sweet, unweaving how the flight of years  
May darkling roll in trials and in tears,  
To dress the future in what garb we list,  
And shape ten thousand joys that never may exist.

But he, sad wight! of all that feverish train,  
Fool'd by those phantoms of the wizard brain,  
Most mildly doats, when young ambition stings  
To trust his weight upon poetic wings;  
He downward looking in his airy ride,  
Beholds Elysium bloom on every side;  
Uncertain bliss each thrilling nerve attunes,  
And thus the dreamer with himself communes.  
Yes! Earth shall witness, ere my star be set,  
That partial nature mark'd me for her pet;  
That Phæbus doom'd me, kind indulgent sire!  
To mount his car, and set the world on fire.  
Fame's steep ascent by easy flights to win,  
With a neat pocket volume I'll begin;  
And dirge, and sonnet, ode, and epigram,  
Shall show mankind how versatile I am.  
The buskin'd Muse shall next my pen employ:  
The boxes from their inmost rows shall sigh;  
The pit shall weep, the galleries deplore  
Such moving woes as ne'er were heard before:  
Enough—I'll leave them in their soft hysterics,  
Mount, in slighter brighter blaze, and dazzle with  
Homeric.

Then, while my name runs ringing through  
Reviews,  
And maids, wives, widows, smitten with my  
Muse,

Assail me with platonic *ballet-doux*.  
From this suburban attic I'll dismount,  
With Courts or Harlequins upon an account;  
Rang'd in my mirror, cards with bright gilt  
ems,

Shall show the whole nobility my friends;  
That happy host with whom I chose to dine,  
Shall make set-parties, give his choicest wine;  
And age and infancy shall gape to see  
When'er I walk the street, and whisper "That  
is he!"

Poor youth! he prints—and wakes, to sleep no  
more.

The world goes on, indifferent, as before;  
And the first notice of his metric skill  
Comes in the likeness of—his printer's bill;  
To pen soft notes no fair enthusiast stirs,  
Except his laundress and who values her?  
None but herself: for tho' the bard may burn  
Her nose, she still expects one in return.  
The luckless maiden, all unblest still sighs:  
His pocket toise hath drawn his pocket dry.  
His tragedy expires in peals of laughter;  
And that soul-thrilling wail—to live hereafter,—  
Gives way to one as hopeless quite, I fear,  
And far more needful—how to live while here.  
Where are ye now, divine illusions all!  
Cheques, dinners, wines, admirers great and  
small!

Chang'd to two followers, terrible to see,  
Who dog him where he walks, and whisper  
"That is he!"

"The State Secret," is another short and lively effort.

AN IMPROMPTU.

"Murder will out:—and so will truth some-  
times;

For once I'll prove it in a dozen lines.—

At one of those parties where Julia's sweet face  
Added interest to beauty, and archness to grace,  
Where many fine folk's met; and one very great,  
Proud and stupid, an embryo Minister, sat;  
Like a damper he came to put good-humour  
out,

And it chanc'd that, as Julia's pet-bird flew  
about,

It presumptuously 'lit on this mighty man's  
head;

When her love-laughing sister, sweet Eleanor,  
said,

"Naughty bird! I must cage you for being so  
rude,

On Lord \*\*\*\*\* head, oh! how dare you  
intrude!"

'Let it rest,' replied Julia, with an exultant  
grace,

'Don't frighten it off—for it likes a soft place.'  
We are also much pleased with the following Epigram:

AURI SACRA FAMES

I knew a being once, his peaked head  
With a few lank and greasy hairs was spread;  
His visage blue, in length was like your own  
Seen in the convex of a table-spoon.  
His mouth, or rather gash athwart his face,  
To stop at either ear had just the space,  
A hideous rift: his teeth were all canine,  
And just like Death's (in Milton) was his grin.  
One shilling, and one fourteen-penny leg,  
(This shorter was than that, and not so big),  
He had; and they, when meeting at his knees  
An angle formed of ninety-eight degrees.  
Nature, in scheming how his back to vary,  
A hint had taken from the dromedary:  
His eyes an inward, screwing vision threw,  
Striving each other thro' his nose to view.  
His intellect was just one ray above

The idiot Cymon's ere he fell in love.

At school they Taraxippus called the wight;  
The Misses, when they met him, shrieked with  
fright.

But, spite of all that Nature had denied,  
When sudden Fortune made the cub her pride,  
And gave him twenty thousand pounds a-year,  
Then from the pretty Misses you might hear,  
"His face was not the finest, and, indeed,  
He was a little, they must own, is-headed;  
His shoulders, certainly, were rather high,  
But, then, he had a most expressive eye."  
Nor were their hearts by outward charms inclined:  
Give them the higher beauties of the mind."

Of the author's tenderness, we select a  
gem-like specimen.

#### TO MARY.

Oh! is there not in infant smiles

A witching power, a cheering ray,

A charm, that every care beguiles,

And bids the weary soul be gay?

There surely is—for thou hast seen

Child of my heart, my peaceful dove,

Gladdening life's sad and chequer'd scene,

An emblem of the peace above.

Now all is calm, and dark, and still,

And bright the beam the moonlight throws

On ocean wave, and gentle rill,

And on thy slumbering cheek of rose.

And may no care disturb that breast;

Nor sorrow dim that brow serene;

And may thy latest years be blest

As thy sweet infancy has been.

There is much more that we wish to extract, but the above must suffice; and we can only direct attention to the beautiful lines written in Hornsey Wood (page 92), the sweet stanzas to . . . . . (page 117), the *feu d'esprit* entitled the Runaway (page 132);—public taste will discover many other pieces deserving of eulogy.

*Cheer. Johnstone's Memoirs of the Rebellion, in 1745-6, &c. 4to.*

(Continued from our last.)

Instead of following up their success at the battle of Falkirk, the Jacobites wasted their strength and time in an unwise and fruitless siege of Stirling Castle. Hence the author edifies the ruin of their cause, and apparently on good grounds. After this, the Prince, as is well known, marched to the north; and Mr. Johnstone gives a more probable account than we have before seen of the attempt of Lord Loudon with 1500 men from Inverness, to surprise him at Moy.

"On the 16th, the Prince slept at Moy, a castle belonging to the chief of the clan of Mackintosh, about two leagues from Inverness. Lord Loudon, lieutenant-general, in the service of King George, and colonel of a regiment of Highlanders, being at Inverness, with about two thousand regular troops, the Prince intended to wait the arrival of the other column, before approaching nearer to that town. In the mean time, Lord Loudon formed the project of seizing by surprise the person of the Prince, who could have no suspicion of any attempt of the kind, conceiving himself in perfect security at Moy; and his Lordship would have succeeded in this design, but for the intervention of that invisible Being who frequently chuses to mani-

fest his power in overturning the best contrived schemes of feeble mortals. His Lordship, at three o'clock in the afternoon, posted guards, and a chain of centinels, all round Inverness, both within and without the town, with positive orders not to suffer any person to leave it, on any pretext whatever, or whatever the rank of the person might be. He ordered, at the same time, fifteen hundred men to hold themselves in readiness to march at a moment's warning; and having assembled this body of troops without noise, and without alarming the inhabitants, he put himself at their head, and instantly set off, planning his march so as to arrive at the castle of Moy about eleven o'clock at night.

"Whilst some English officers were drinking in the house of Mrs. Baillie, an innkeeper in Inverness, and passing the time till the hour of their departure, her daughter, a girl of thirteen or fourteen years of age, who happened to wait on them, paid great attention to their conversation, and, from certain expressions dropped from them, she discovered their designs. As soon as this generous girl was certain as to their intentions, she immediately left the house, escaped from the town, notwithstanding the vigilance of the centinels, and immediately took the road to Moy, running as fast as she was able, without shoes or stockings, which, to accelerate her progress, she had taken off, in order to inform the Prince of the danger that menaced him. She reached Moy, quite out of breath, before Lord Loudon; and the Prince, with difficulty, escaped in his robe de chambre, night-cap, and slippers, to the neighbouring mountains, where he passed the night in concealment. This dear girl, to whom the Prince owed his life, was in great danger of losing her own, from her excessive fatigue on this occasion; but the care and attentions she experienced restored her to life, and her health was at length re-established. The Prince, having no suspicion of such a daring attempt, had very few people with him in the castle of Moy.

"As soon as the girl had spread the alarm, the blacksmith of the village of Moy presented himself to the Prince, and assured His Royal Highness that he had no occasion to leave the castle; as he would answer for it, with his head, that Lord Loudon and his troops would be obliged to return faster than they came. The Prince had not sufficient confidence in his assurances to neglect seeking his safety by flight to the neighbouring mountains. However, the blacksmith, for his own satisfaction, put his project in execution. He instantly assembled a dozen of his companions, and advanced with them about a quarter of a league from the castle, on the road to Inverness. There he laid an ambuscade, placing six of his companions, on each side of the highway, to wait the arrival of the detachment of Lord Loudon, enjoining them not to fire till he should tell them, and then not to fire together, but one after another. When the head of the detachment of Lord Loudon was opposite the twelve men, about eleven o'clock in the evening, the blacksmith called out with a

loud voice, "Here come the villains, who intend carrying off our Prince; fire, my lads, do not spare them; give no quarter." In an instant muskets were discharged from each side of the road, and the detachment, seeing their project had taken wind, began to fly in the greatest disorder, imagining that their whole army was lying in wait for them. Such was their terror and consternation, that they did not stop till they reached Inverness. In this manner did a common blacksmith, with twelve of his companions, put Lord Loudon and fifteen hundred regular troops to flight. The sifer of his Lordship, who happened to be at the head of the detachment, was killed by the first discharge; and the detachment did not wait for a second."

But the history of the rendezvous at Ruthven, after the defeat at Culloden, is the most interesting part of the work.

"I arrived, (says the writer) on the 18th, at Ruthven, which happened, by chance, to become the rallying point of our army, without having been previously fixed on. There I found the Duke of Athol, Lord George Murray, the Duke of Perth, Lord John Drummond, Lord Ogilvie, and many other chiefs of clan, with about four or five thousand Highlanders, all in the best possible dispositions for renewing hostilities and taking their revenge. The little town of Ruthven is about eight leagues from Inverness, by a road through the mountains, very narrow, full of immensely high precipices, where there are several passes which a hundred men could defend against ten thousand, by merely rolling down rocks from the summit of the mountains.

"Lord George Murray, immediately dispatched people to guard the passes, and at the same time sent off an aid-de-camp to inform the Prince, that a great part of his army was assembled at Ruthven; that the Highlanders were full of animation and ardour, and eager to be led against the enemy; that the Grants, and other Highland clans, who had, till then, remained neuter, were disposed to devote themselves in his favour, seeing the inevitable destruction of their country from the proximity of the victorious army of the Duke of Cumberland; that all the clans who had received leave of absence, would assemble there in the course of a few days; and that, instead of five or six thousand men, the whole of the number present at the battle of Culloden, from the absence of those who had returned to their homes and of those who had left the army on reaching Culloden, on the morning of the 16th, to go to sleep, he might count upon eight or nine thousand men at least, a greater number than he had had at any time in his army. Every body earnestly intreated the Prince to come immediately, and put himself at the head of this force.

"We passed the 19th at Ruthven, without any news from the Prince. All the Highlanders were cheerful, and full of spirits in a degree perhaps never before witnessed in an army so recently beaten, expecting, with impatience, every moment the arrival of the Prince; but, on the 20th, Mr. Macdonald, Lord

George's aid-de-camp, who had been sent to him, returned with the following laconic answer: 'Let every man seek his safety in the best way he can'—an inconsiderate answer, heart breaking to the brave men who had sacrificed themselves for him. However critical our situation, the Prince ought not to have despaired. On occasions when every thing is to be feared, we ought to lay aside fear; when we are surrounded with dangers, no danger ought to alarm us. With the best plans we may fail in our enterprises; but the firmness we display in misfortune is the noblest ornament of virtue. This is the manner in which a Prince ought to have conducted himself, who, with an unexampled rashness, landed in Scotland with only seven men.

"We were masters of the passes between Ruthven and Inverness, which gave us sufficient time to assemble our adherents. The clan of Macpherson of Clunie, consisting of five hundred very brave men, besides many other Highlanders, who had not been able to reach Inverness before the battle, joined us at Ruthven; so that our numbers increased every moment, and I am thoroughly convinced that, in the course of eight days, we should have had a more powerful army than ever, capable of re-establishing, without delay, the state of our affairs, and of avenging her barbarous cruelties of the Duke of Cumberland. But the Prince was inexorable and irremovable in his resolution of abandoning his enterprise, and terminating in this glorious manner an expedition, the rapid progress of which had fixed the attention of all Europe. Unfortunately, he had nobody to advise with but Sir Thomas Sheridan, and their Irishmen, who were altogether ignorant of the nature and resources of the country, and the character of the Highlanders; and who had nothing to lose, but, on the contrary, a great deal to gain on arriving in France, where several of them have since laid the foundations of their fortunes.

"Our separation at Ruthven was truly affecting. We bade one another an eternal adieu. No one could tell whether the scaffold would not be his fate. The Highlanders are vent to their grief in wild howlings and lamentations; the tears flowed down their cheeks when they thought that their country was now at the discretion of the Duke of Cumberland, and on the point of being plundered; whilst they and their children could be reduced to slavery, and plunged, without resource, into a state of remediless distress.

"An accident which took place at Inverness, some days after the battle, might have proved very advantageous to us, if the Prince did not join us at Ruthven. A young gentleman of the name of Forbes, related to Lord Forbes, and a cadet in an English regiment, having abandoned his colours to join the Prince, had the misfortune to be taken prisoner, and was hanged at Inverness, without any distinction, amongst the other deserters. Whilst the body of Forbes was still suspended from the gibbet, a brutal and vulgar English officer plunged his sword into his body, and swore that "all his countrymen were traitors

and rebels like himself." A Scots officer, who heard the impertinence of this Englishman, immediately drew his sword, and demanded satisfaction for the insult done to his country; and, whilst they fought, all the officers took part in the quarrel, and swords were drawn in every direction. The soldiers, at the same time, of their own accord, bent to arms, drew up along the streets, the Scots on one side and the English on the other, beginning a very warm combat with fixed bayonets. The Duke of Cumberland happening to be out of town, information was immediately conveyed to him, and he hastened to the scene of action before this warfare had made much progress. He addressed himself immediately to the Scots, whom he endeavoured to mollify by the high compliments he paid them. He told them that, whenever he had had the honour of commanding them, he had always experienced their fidelity and attachment to his family, as well as their courage and exemplary conduct; and he succeeded at length in appeasing them.

"Thus did Prince Charles begin his enterprise with seven men, and abandon it at a moment he might have been at the head of as many thousands: preferring to wander up and down the mountains alone, exposed every instant to be taken and put to death by detachments of the English troops, sent by the Duke of Cumberland in pursuit of him, and who followed him closely, often passed quite near him, and from whom he escaped as if by miracle, to putting himself at the head of a body of brave and determined men, of whose fidelity and attachment he was secure, and all of whom would have shed the last drop of their blood in his defence. Indeed this was now the only means of saving themselves from the scaffold, and their families from being slaughtered by a furious, enraged, and barbarous soldiery. The Highlands are full of precipices, and passes through mountains, where only one person can proceed at a time, and where a thousand men can defend themselves against a hundred thousand, for years; and as it abounds with horned cattle, of which they sell above one hundred thousand yearly to the English, provisions would not have been wanting. But this partisan warfare it would only have been necessary to adopt as a last resource; for I am morally certain that, in the course of ten or twelve days, we should have been in a condition to return to Inverness, and fight the Duke of Cumberland on equal terms. Whenever I reflect on this subject, I am always astonished that Lord George Murray, and the other chiefs of clans, did not resolve to carry on this mountain-warfare themselves, for their own defence; as nothing can be more certain than what was said by a celebrated author, that, in a revolt, "when we draw the sword we ought to throw away the scabbard." There is no medium; we must conquer or die. This would have spared much of the blood which was afterwards shed on the scaffold in England, and would have prevented the almost total extermination of the race of Highlanders, which has since taken place, either from the policy of

the English government, the emigration of their families to the colonies, or from the numerous Highland regiments which have been often cut to pieces, and renewed during the last war.

"Prince Charles, for several months, was hotly pursued by detachments of English troops; and so very near were they frequently to him, that he had scarcely quitted a place before they arrived at it. Sometimes he was wholly surrounded by them. The Duke of Cumberland never failed to say to the commanders of these detachments, at the moment of their departure, "make no prisoners: you understand me." They had particular instructions to stab the Prince, if he fell into their hands; but Divine wisdom frustrated the atrocious and barbarous designs and pursuits of the sanguinary Duke, whose officers and their detachments, his executioners, inflicted more cruelties on the brave but unfortunate Highlanders, than would have been committed by the most ferocious savages of Canada. The generous and heroic action of Mr. Roderic Mackenzie contributed greatly to save the Prince from those blood-thirsty assassins.

"Mr. Mackenzie, a gentleman of good family in Scotland, had served, during the whole expedition, in the life-guards of Prince Charles. He was of the Prince's size, and, to those who were not accustomed to see them together, might seem to resemble him a little. Mackenzie happened to be in a cabin with the Prince, and two or three other persons, when, all of a sudden, they received information that they were surrounded by detachments of English troops, advancing from every point, as if they had received positive information that the Prince was in this cabin. The Prince was asleep at this moment, and was awakened for the purpose of being informed of his melancholy fate, namely, that it was morally impossible for him to save his life. He answered, "Then we must die like brave men, with swords in our hands."—"No, my Prince," replied Mackenzie; "resources still remain; I will take your name, and face one of these detachments. I know what my fate will be; but whilst I occupy it, your Royal Highness will have time to escape." Mackenzie darted forward with fury, sword in hand, against a detachment of fifty men, and on falling, covered with wounds, he exclaimed aloud, "You know not what you have done!—I am your Prince, whom you have killed!" after which he instantly expired. They cut off his head, and carried it, without delay, to the Duke of Cumberland, nobody doubting that it was the head of Prince Charles. And the barbarous Duke, having now, as he thought, obtained the head of the Prince, the great object of his wishes, set off next day for London, with this head packed up, in his post-chaise."

We find that we cannot conveniently do justice to our review of this work as we purposed, without extending it into another Number; and we shall therefore, once more bring it before our readers.

(To be concluded in our next.)

## BRITANNY.

Our four preceding numbers have so successfully exemplified Mrs. Stothard's tour, that we shall now leave it to the public, with very little further notice. We have already said, that the embellishments are beautifully executed; and the text must have impressed its own character on our readers before they arrived at this page. A little correction would have rendered the style more worthy of praise, and it would have added to the excellence of the volume had the gossip comparisons between the French and English stage and actors been omitted, some of the remarks on Paris retrenched as trite, and a piece of sensibility about a nosegay-seller of that sentimental and heartless capital, utterly suppressed, as in bad taste and out of keeping with the rest of the work.

We imagine that the fair authoress has made a mistake at p. 45, where she speaks so highly of Guerin's picture in the Luxembourg;—when we saw the fine production of that artist, it was not "Telemaachus relating his adventures to Calypso," but Encaes and Dido. We never heard of the other *chef d'œuvre*.

The following anecdote corroborates an old observation. At Eu, Mrs. S. writes—

"In the chamber adjoining mine, separated only by a partition so thin that I could hear every sound, a monsieur, who, I find, unites the professions of tailor and *maître d'agrément*, was instructing a little girl, daughter of his *maîtresse d'hôtel*, in the art of dancing. They jumped so intolerably, that the floor shook at every step. The loud voice of the master rose higher than that [voice] of his violin; and his encouraging expressions to his pupil were so truly diverting, that I could not avoid listening to them:—'*Tournez, Mademoiselle! tournez les yeux vers les cieux!*' A Frenchman's expressions are always upon the grand scale, as Sterne long since remarked: but what, thought I, can a dancing-master have to do with the eyes of his scholar; a plain Englishman would not have carried his instructions beyond the management of the feet, or the arms, at most; but in France the effort which the execution of a thing is to produce, is as much considered as the thing itself: so I imagine, therefore, the management of the eyes is of no small importance in the art of dancing. I was confirmed in my conjecture; for the master dismissed his little pupil with the encouraging exclamation of '*Aller vous-en jolie mignonne, tu seras coquette un jour!*'"

We dare say the prediction would be verified if the lady lived. But we have been profuse in our anecdotes from this volume, and need now to exhibit one or two of its antiquities. The subjoined extract serves our purpose.

"The journey from Josselin to Hennebont lies through a very agreeable country. We passed in our way the abominable and dirty town of Locminé, whence we continued our route till we came to Baud. There the horses rested, and taking a little ragged Breton for our guide, we proceeded to view a curious piece of antiquity in the neighbour-

hood. Descending a steep hill, through a wild and beautiful wood, thickly sown with beech and chestnut trees, we passed by a copse, and at length arrived at the summit of a gentle eminence, where, placed upon a pedestal, stands a naked female figure, carved in stone, with a kind of stole about her neck; the workmanship is extremely rude and barbarous. This figure, together with a large reservoir, or stone bath, was found in the side of the hill called *Castanet*, near Baud. It is, most probably, a Celtic re-  
main, and bears a strong resemblance, in its general character, to Egyptian works. On the base of the pedestal are several modern inscriptions, one of them styling this figure the *Venus of Armorica*."

But the most remarkable remains are at Carnac; and the following is a very interesting account of them:

"We hired a cabriolet, and left Auray early this morning; besides the driver, a man accompanied us, who walked by the side of the voiture, in order to render his assistance in preventing it from being upset by the large, loose and broken rocks that strewed the way, and lie in confused heaps about the road. After travelling three leagues through a desolate and wild country, we arrived at a spot about a mile from the sea-shore, where this curious Celtic antiquity remains a monument at once of the power and insufficiency of man; for his own stupendous work has long outlived all memory of its founder or its history. Carnac is infinitely more extensive than Stone Henge, but of a ruder formation; the stones are much broken, fallen down, and displaced; they consist of *eleven rows*, of unwrought pieces of rock or stone, merely set up an end in the earth, without any pieces crossing them at top. These stones are of great thickness, but not exceeding nine or twelve feet in height; there may be some few fifteen feet. The rows are placed from fifteen to eighteen paces from each other, extending in length (taking rather a semicircular direction) above half a mile, on unequal ground, and towards one end upon a hilly site. The semicircular direction was probably accidental; as, from their situation, it was not possible to see all the ground at once, in order to range them in a straight line. When the length of these rows is considered, there must have been nearly three hundred stones in each, and there are eleven rows: this will give you some idea of the immensity of the work, and the labour such a construction required. It is said that there are above four thousand stones now remaining. We remarked three *tumuli*,—probably the graves of chiefs; they are formed of large stones placed upon each other, on a raised bed of earth. In some places the irregular line of the work is broken, by the ground having been cleared for fields; in others stones that have fallen were broken up and carried away for building. More injury has, perhaps, been done to this stupendous Celtic work by the hand of man than by that of time. The place was peculiarly well chosen for obtaining materials to construct such a monument, as the ground for miles round is

full of rock. We could gain no information from the people, relative to any thing that might have been found; for, in answer to whatever we said to the peasant, we received replies in the Breton tongue, of which we could only articulately distinguish the word *gaelic*, and this was repeated whenever we accented them. I have been informed by a priest, but I know not how it may be correct, that the word *Carnac* signifies literally, in the Breton language, a *field of flesh*: it would be the true meaning of the word, if this led one to conjecture that these stones were placed in memory of some great battle, or as memorials in a common cemetery of the dead. The people have a singular custom whenever their cattle are diseased, of coming amongst these stones, to pray to St. Cornelius for their recovery. Such a practice may be a remnant of Pagan superstition continued in Christian times; but, I must remark, that St. Cornelius is the patron saint of the neighbouring church.

"I cannot learn that the peasants of this country have any traditions about Carnac, and I must here observe, that no relation or accounts, given either by the poor or more enlightened people of Brittany can be relied upon."

The engraving illustrative of these antiquities, helps the reader to a perfect idea of them.

We are sorry that, owing to its length, we cannot find room for the best description of the famous Bayeux Tapestry which has yet been published. A later but curious specimen of the same sort of performance at Saumur is thus described.

"The church of St. Pierre, an ancient and interesting building, contains the curious tapestry, representing the adventures of St. Florent. This work was executed in the fifteenth century; it is long and narrow, like the tapestry of Bayeux. Florent and Florian were brothers and soldiers, who professed Christianity, and who bearing the several persons of the same faith were also suffering martyrdom at Laurick, they resolved to hasten to them, in the hope of affording consolation to their distress. The brothers were seized during their journey and condemned to death. These unfortunate prisoners being tied to a tree, a deep sleep overcame them and their guard, who an angel, appearing in a dream to St. Florent, he was directed to pass into Gaul, and as soon as he awoke, found himself at liberty to depart. Amongst his miraculous adventures during the journey, it is recorded a boat carried him over the Rhone, without having a bottom to it, or any sails or oars. Upon arriving at a cave, near Mount Causse, he found it filled by serpents, which he drove out with his prayers, and then established himself in their former residence. Some time after he chanced to meet an old blind woman, whose son had been drowned three days before. St. Florent bade her not despair, and immediately setting several stones follows to work with their nets, they *fish* up the young man alive and well. The saint sent the youth to his mother, who

res were immediately opened : no wonder ; or surely the very hearing of such a miracle, would open the eyes of any one. This accession of Catholic wonders is worked upon the tapestry, and devoutly gazed at by the old women and little children, who burn their candle-ends in homage to the saint.

Near Saumur is the celebrated Abbey of Fontevraud, one of the grandest religious edifices in France, and of immense extent. It existed from the 11th century to 1793, when the revolution made it a prey, and demolished it. This Abbey, where several of our early kings were buried, was founded by Robert D'Arbrissel, a Breton priest, famous for his success in preaching the first crusade in the time of Pope Urban II. He so founded orders of St. Madeleine for *monks repentants*, and of St. John, for *nuns*.

"Towards the end of his career, he gave up the authority as superior, and invested it in the person of a beautiful lady named Penouille de Chemille, electing her Abbess of Fontevraud, and submitted both himself and all the convents to her supremacy. He died in D. 1117, and was interred near the altar of the great church. His effigy, of white marble, was afterwards removed beneath a monument dedicated to his memory, by Louis de Bourbon, Abbess of Fontevraud in the year 1623. The modern tomb remains ; but whether the revolutionists destroyed the effigy or not when they pillaged the monastery is uncertain : it no longer exists. After the death of Robert, the Pope refused him canonization, in consideration of the outlandish penance to which he frequently devoted himself previous to his dissolution ; for it was the holy man's custom, to show how spiritual contemplations had overcome all worldly feelings, to pass some hours of the night with two of the youngest and most beautiful nuns, who were enjoined to sleep, while the saint prayed by their side.

"It is remarkable that the costume of these monks and nuns never altered from the time of their first establishment, in the seventh century, to that of their abolition in 1793. They were clothed by order of Robert D'Arbrissel, according to the prevailing taste of the time : the men wore black, covered by a long mantle, to which a cowl was tacked ; and, at the bottom of the garment, both in front and behind, appeared a small square piece of cloth, which bore the name of the *Robert* : the nuns were attired in a white petticoat of fine linen, with lawn sleeves nicely plaited ; a black stomacher or belt completed the gown ; the head was veiled with a light black shawl, and the feet in white stockings, and shoes ; the extreme plainness of this costume received considerable embellishment from the full folds of the long and elegant black mantle that they wore during divine service."

The subjoined particulars are historically interesting, and with them we conclude our view.

"When Mr. S—— first visited France during the summer of 1816, he came direct

to Fontevraud, to ascertain if the royal effigies of our early kings, who were buried there, yet existed : subjects so interesting to English history were worthy of the enquiry. He found the abbey converted into a prison, and discovered in a cellar belonging to it, the effigies of Henry the Second and his queen Eleanor of Guienne, Richard the First, and Isabella of Angoulême, the queen of John. The chapel, where the figures were placed before the Revolution, had been entirely destroyed ; and these valuable effigies, then removed to the cellar, were subject to continual mutilation from the prisoners, who came twice in every day to draw water from a well. It appeared they had sustained some recent injury, as Mr. S—— found several broken fragments scattered around. He made drawings of the figures ; and, upon his return to England, represented to our government the propriety of securing such interesting memorials from farther destruction. It was deemed advisable, if such a plan could be accomplished, to gain possession of them, that they might be placed, with the rest of our royal effigies, in Westminster Abbey. The English government failed in this, from the affair having passed through too political a channel. It is probable, that had an application been made in the first instance by the Prince Regent to Louis the Eighteenth, it would have proved successful ; but it is fortunate that the application was made even in this manner, as it has served the purpose of securing these remains from total destruction. \* \*

"Henry the Second was the first English monarch buried at Fontevraud. His tomb was erected in the choir of the great church, according to his desire. His epitaph was as follows :—

Rex Henricus eram, mihi plurima regna subegi,  
Multiplicque modo, duxque, conquesque fui,  
Cui satis ad votum non essent omnia terre  
Climata, terre modo sufficit octo pedum.  
Qui legis hanc, pensa discrimina mortis, et in me  
Humane speculum conditionis habes  
Sufficit huic tumultus cui non succederat orbis."

"In justice to the French hotels we have to state, that a respectable correspondent, who has travelled from 4 to 5000 miles in France, remarking on the imposition related by Mrs. S. as having been practised at Abbeville, assures us that though travelling in an English carriage, and dining in a private *salon*, he has seldom been charged for dinner more than *five francs* a head for his party—sometimes only *four* ; never more than *six* ; and this latter only when having sent a *courier en avant* (it being late at night), he had given extra trouble.—Respecting the *Table d'hôte*, he adds, "I have not often dined at one, but I understand that the price is never more than *three francs* for each person, which includes half a bottle of wine. In two places, at Lyons and Nismes, I paid this. In regard to Abbeville, where this imposition is related as having taken place, I beg to mention, that I have been there no fewer than *six* times ; the last time I was there, which was about six weeks ago, my party was three in number, and, at the *Hôtel de l'Europe* (which I strenuously recommend to English travellers), we had for our *déjeuner à la fourchette, polage ou vernicelle*, two partridges, plenty of *coquilles de moules parades*, a tart, vegetables, fine fruit, confectionary, and coffee, with

## HISTORICAL SKETCHES.

From the Death of Egbert to the Accession of Alfred.

Egbert, to whose death our last Sketch, (*Literary Gazette* Number 200) brought down the early history of Britain, has been represented as the first sovereign who was crowned king of all England ; but Mr. Turner, we think, completely disproves this tradition. Even his grandson Alfred signed himself king of only the West Saxons ; and the father, who had not incorporated East Anglia, Mercia, or Northumbria, could not have assumed so comprehensive a title. In point of fact, Athelstan, who destroyed the Danish sovereignty, was the *primus Monarcha Anglorum*, as he is styled by Alured.

Ethelwulf, the successor of Egbert, did not prosecute his father's ambitious course ; for he was a timid quiet prince, though a pupil of St. Swithun, and of the still more warlike prelate, Alstan, Bishop of Sherborne. Ethelwulf married Osberga, the daughter of Oslea, the king's cup-bearer, a descendant of the chief who obtained the Isle of Wight, in the line of Cerdic ; and in 849 that lady, at Wantage, in Berks, bore him Alfred the Great, after having had three elder sons. It was within a very few years of this period that the Danes, or Northmen, first ventured to winter on our coast ; for hitherto their piratical expeditions always terminated by their returning home in autumn. In 852 these depredators entered the Thames with 350 ships, plundered Canterbury and London, and marched into Mercia, where they defeated its king Bertulf, the last monarch but one of that kingdom. They then turned southward, and entered Surrey ; but here, at Aylesa, a field of oaks, fortune forsook them, and they were routed with dreadful slaughter by Ethelwulf and his son Ethelbald.

The Vikings appeared again in Thanet, in 853, slew the leaders of Kent and Surrey, Eathere and Huda, and obtained an obstinately contested victory. In this year Alfred, being five years of age, was sent by his father to Rome, accompanied by a large train of nobles and others. Indeed, visits to Rome were frequent at this period. Ethelwulf went thither himself in 855, taking his favourite child Alfred with him ; and St. Neot, his son or brother, made no fewer than seven journeys to the Roman capital. It was at this period that the king, with the sanction of his Witenagemot, made that donation to the church which is usually construed to be the grant of its tithes. But, (says Mr. Turner,) on reading carefully the obscure words of the three copies of this charter, which three succeeding chroniclers have left us, it will appear that it cannot have been the original grant of the tithes of all England. These words imply either that it was a liberation of the land of which the clergy had before been in possession, from all the services and payments to which the Anglo-Saxon lands were generally liable, or

a bottle of good wine, for which I was charged, having made no previous bargain, *four francs* a head."

that it was an additional gift of land, not of tithes, either of the king's private patrimony, or of some other which is not explained. The reason for the gift, which is added in the charter, strengthens the first supposition; but the terms used to express the persons to whom the benefit was granted, seem to confine it to monastical persons. But whatever was its original meaning, the clergy in after ages interpreted it to mean a distinct and formal grant of the tithes of the whole kingdom. This is a curious subject, and the clergy seem to have done what all classes of men are apt to do who have obtained grants by deed: viz. try to extend its meaning to the utmost for their own benefit.

Ethelwulf, on his journey to Italy, passed through France, where he was liberally entertained by Charles, the French king, whose daughter Judith he married on his return, though then an old man. His presents to the Pope were very splendid. A crown of pure gold, weighing 4lb., two golden vessels called *bancas*, a sword adorned with pure gold, two golden images, four Saxon dishes of silver gilt, besides valuable dresses, are enumerated by his contemporary Anastasius, in his *Bibliotheca de vitis Pontif.* But one act which he did at Rome is worth all the rest. He saw that the public penitents and exiles were bound with iron, and he obtained an order from the Pope, that no Englishman out of his country should be put into bonds for penance.

To Judith, the queen of Ethelwulf, the country was indebted for more important services than usually belong to a step-daughter's character; for it was she who began the education of Alfred, and implanted in him all his literary taste. But political events of great moment also followed the return of Ethelwulf. The sceptre of Wessex was wrested from his hand by his son Ethelbald, jealous of the partiality shown towards his younger brother, whom Ethelwulf had procured to be anointed and crowned by the Pope, while yet but a child. In five years, *i. e.* in 860, Ethelbert, his father and brother having both died, succeeded to the united provinces of Wessex, Kent, Surrey, and Sussex; and at this era the northern Viking again invaded England, and destroyed Winchester; but chased in their retreat by the earls of Hampshire and Berkshire, they ascended the Seine in 300 vessels, and obtained money from king Charles as the price of their forbearance to plunder. Winter forbidding their return, they settled along the river and adjacent shores, and obliged the Flemings to build those castles and fortified places for their defence, which have ever since formed so memorable a feature in the wars of Europe. In 864 they wintered in Thanet, and in 866 Ethelbert died, after a short reign of six years. Ethelred, the third son of Ethelwulf, succeeded, and the death of the renowned Ragnar Lodbrok, in prison in Northumbria, at this period, was pregnant with terrible consequences to England. The sons of that mighty pirate laid aside their hostilities as sea-kings, and formed a league to avenge his fall. Jutes, Swedes,

Norwegians, Danes, Russians, and other northern flocked to their standard, and an expedition, led by eight kings and twenty earls (all under Halfdan, Ingvar, and Hubba or Ubbo, three of Ragnar's sons) rushed to the invasion of Northumbria; but either through design or error, passed that coast and anchored off East Anglia. They wintered in quiet, but next year, 867, ravaged Yorkshire and all the country to the Tyne. Osbert and Ella, the chiefs of Northumbria, were routed, and the sons of Ragnar inflicted an inhuman measure of retaliation on the latter for their father's sufferings. They divided his back, spread his ribs into the figure of an eagle, and agonized his lacerated flesh by the addition of the saline stimulant. Thus Northumbria ceased to be an Anglo-Saxon kingdom; a fate deserved by a century of revolutionary and bloody struggles for royal power, during which usurper murdered usurper, and a crowd of ghastly monarchs, like those in the vision of Macbeth, passed from the throne to the sepulchre, and hundreds of their subjects were sacrificed. In 876, Ingvar, the Dane, assumed the sceptre of Northumbria from the Humber to the Tyne. At present we have not room for any of the details of their barbarities in over-running East Anglia and murdering its king, St. Edmund; nor in attacking Wessex, and the consequent death of king Ethelred. We may probably be induced, in a future Number, to transcribe Ingulph's account of these atrocities, but having now arrived at the year 870—*i. e.* the accession of the glorious Alfred, it affords a convenient opportunity for concluding this sketch.

By a Cockney Grey Head.

#### CHAPTER XI.

#### Sir Hans Sloane and the Gladiators.

I remember Dr. Arbuthnot once calling upon me late at night, to make an appointment for the next morning to Bloomsbury-square. "I will be with you at eleven," said the doctor, "and take you up. Sir Hans has invited a select party to examine the structure of the heads of some of Fig's gladiators. He desired me to let you into the secret. Fig has promised on the word of a gentleman, to bring the myrmidons; but they are shippery fellows. I would give ten pounds to see the *she-devils*, said the doctor, alluding to the female wretches that fought with swords upon Fig's stage, and hacked and cut each other with infernal vengeance. "I hear they are expected, and that Roubiliac has engaged to take their masks for Sir Hans's museum. O rare!" said the doctor, "and I have won a *magnus bonum* of Monsey—so much for his whimsical systems. I can trust you, friend Zachary," said he; "Monsey would wager with me that the Cornish man would vanquish Broughton." "For why?" said I. "O! I know it by his ear," said he; "a man with such an ear may be bored down by main strength; he may be beaten to death, and consequently

vanquished, that I admit," said he, in his usual way; "but never will such a man with such an ear, cry, '*hold, enough!*'"

"I wonder," added the doctor, "how a man of Monsey's parts can be misled by the visionary ravings of such an ass as that mountain of wig, old . . . . . It was but lately I prevented his falling into a snare of that right noble jack-pudding's, the Duke of Montagu; and but for me and Chasuble he would have outed with a learned treatise upon Mother Tofts, the rabbit-breeder of Godingham—Verily, I'll tickle him for *this*," said the lively doctor, as he stepped after me into his carriage; "'twill be a rarity. Yes, I will be his priest, and give him a pious scourging for his sins."

"As we entered the hall of Sir Hans," said my uncle, "we met Dr. Chayne, talking with three or four fellows, the most biddling visaged ruffians that terror itself could imagine. They looked ferocious, wild, and suspicious, as though they repented of their *condescension* in obeying the summons of Fig their chief. But the lure of money, (and they were to be well paid) induced them to remain. One of the men servants was sent to recruit their spirits with a bumper of comic, to fit them for the review. *Never did audacious culprits seem more down-fallen and abashed*," said uncle Zachary, "on beholding the judges arranged in terrible shone, than did these hectoring brags, as they awkwardly bowed when they entered the drawing room in the presence of this learned, grave looking coterie, seated beneath their ponderous wigs. Arbuthnot whispered, this is the triumph of wisdom over strength, of spirit over matter, friend Zachary; an apothecary's boy would scare them to death with a half pint syringe."

Dr. Monsey endeavoured to coax them into something like humanity. Chayne was ready to laugh at their uncouthness. "Let me feel your head, mon," said he. *Samus* advanced, when the good humoured Sir said, with such original drollery, "I'll not hurt the hair of your head, mon," that the ruffian relaxed his grim muscles into amity. he was bald as a new born babe.

"Chayne is the man to manage them," said Arbuthnot, slyly to Monsey; "he does not take the science by the ear."

Sir Hans smiled, and shook his head. "he had the most venerable philosophic countenance," said my uncle; "and the suavity of his manners corresponded with his look." He enjoyed the wit and playful railery of Arbuthnot. "Come, come, Doctor," said he, "be careful how you direct your shafts at Monsey, or they may place perchance on another." The truth is, Sir Hans was apt to be fanciful in his philosophical speculations, and had been an ally with Monsey touching the mistake of the doctor's ear.

"Arbuthnot generally casts two stones in one jerk of his satirical sling," said Chayne. "But what sin has Monsey been perpetrating against thy orthodox, brother Arbuthnot?" "Why," said the lively physician, "I must refer you to the unsophisticated argument of Broughton's fist." "The

avours of a pun, mon," said Cheyne, "and one of the unhappiest that ever struggled still-born from the womb of thy wit."

"Yet not quite so bad," replied Arbutnot, who was ever superior to his compeers in the retort courteous—"not quite so bad as thy hypothesis, brother Monsey, (taking me worthy Doctor by the hand, and slinking it most cordially the while he spoke,) which Broughton knocked on the head with thy Cornish hero, with the same blow."

"It was with this kind of good humoured adroitness these distinguished geniuses were accustomed to end their scientific differences," said my uncle Zachary: and then he would apostrophize them, and add, "Ah! who but must venerate their honoured dust!"

"But this good humoured railleury did at terminate without another playful hit at Monsey," said my uncle Zachary. "Sir Hans had invited Hogarth to be of the party, Chiselden requested him to oblige him with a sketch of Fig, to place in his book of comparative anatomy. Broughton he had already drawn at a former meeting, for the same purpose. The painter just then made its appearance."

"Sir Hans opened a ponderous interleaved folio, to seek for a head among the Roman portraits," said my uncle, "which he declared to be cast in the same mould with Fig. Among the collection, which was multifarious, was a masque of one of the furies, engraved by Mark Antonio from the antique. It was a most fiend-like visage, and made Cheyne exclaim in a long expiration, feugh! 'tis my life, Sir Hans Sloane, ken ye not that we're told of Æschylus, in that infernal piece, as how his furies made the shrieking Greek women to miscarry, and frightened the qualling bairns to death! Never by my oath, till this blessed moment, did I give credence to that story."

Cheyne, full of his subject, turned to Hogarth, saying, "I'm glad ye are come," then tracing the outline of the mask, with a flourish of his fat fingers, went on—"Look upon it, Willy, you clever rogue, you will ever fetch a scheme like that from the life, never you go farther for it, gude mon! than only Heaven, I hope, will ever send ye."

Hogarth quietly unrolled a paper, and laid on the folio. The party were astonished, it was a head indeed—a sister fury. "Ah!" said Cheyne, "the Lord preserve us mon, there have ye been raking for this imp of lack perdition!" "From the fiery regions of Sir Hans Sloane's kitchen," said the painter; and thereby hangs a tale, which you mayest see, gentle reader, in my next chapter.

Hogarth remembered his promise to Chiselden; and Sir Hans gave him his red-rococo paper case, laid him a pencil and an-knife, and begged him to sit at his desk.

He had the manners of the court of Louis le Fourteenth," said my uncle Zachary. Hogarth smiling, bowed to the worthy night, and observed, "Your courtesy, Sir Hans, would better suit a better genius; I am not often accommodated thus. My portfolio and desk are frequently contained in my glove." This alluded, said my uncle,

to his sometimes sketching a character on his finger nails.

Whilst he sketched Fig, who was bare headed, said my uncle, Monsey held the gladiator's wig upon his cane. "Come," said Cheyne, to Chiselden, who could use his pencil, "come, try your talent, mon, and give friend Hogarth a remuneration in kind, for his Essay on Perri-wigs. We ken a doctor's pate full well you see, by his hairy thatching; a bishop, judge, and a crew of other lige subjects of King George, the Lord defend him! but who could'er divine this little scratch covered the cranium of the mighty Fig?"

Hogarth hit him off before Chiselden had accomplished his attempt at the wig; he had rubbed and corrected a hundred times, when Hogarth, taking his pencil case, archly observed, "it only wants a few of my anatomical touches."

Monsey began a lecture on the sketch—"How wondrous is the imagination; I see the gladiator, by association in that wig," said he, "done nearer to the life than in a thousand portraits."

"Give him the portrait, Willy, if thou lovest me," said Cheyne, "and I will write a dedication." Hogarth consented, and Cheyne inscribed beneath with his pencil—

To my learned friend, Dr. Messenger Monsey, this:

Doctor behold this wig,

(And let thy wearer pass

With face of brass);

It fits the scull of Fig.

'Tis his, even to a hair;

His wig turn not good friend,

'Twill burn your fingers' end,

So Monsey have a care!

## ORIGINAL CORRESPONDENCE.

### PHILOLOGY.

To the Editor of the Literary Gazette.

Sir,—I cannot help thinking the speculations of M. Galiffe on the origin and language of ancient Rome as fanciful as they are judicious. I fully coincide with that gentleman's opinion, that Rome was not founded by Italians; for as he observes, it is most improbable that one of their colonies should have departed from their general rule of building on mountains, and have formed a settlement on a low hill surrounded by marshes; which we have classical authority for believing must have been at all times subject to the same physical curse, the *Malaria* that now affects the modern city. The most natural inference to be drawn is, that some adventurers, or a body of warriors, as M. Galiffe calls them (their early history certainly indicates them to have been of a warlike tribe) "who had escaped by sea from some great national disaster, landed near the spot where Rome now stands, and encamped on one of its hills, not as a matter of free choice, but because it was the first place that they found convenient for their purpose."

Having asserted thus much, which every body must allow to be consistent with reason and judgment, Mr. Galiffe proceeds to point

out the original nation of these warriors in a manner which induces me to consider his arguments as far from true, and fanciful in the extreme.

Conjectural etymology, than which no mode of reasoning is in general more delusive, is the system on which Mr. Galiffe has raised his most sanguine hopes.

It is universally true, that new settlers must mix their language with that of the natives; and as new nations are introduced and adopted, one language is formed between them. Suppose then the Latin tongue to have been thus created, and as we find it only used in the capital of Italy, it is clear that at first it was only formed by the union and connection with the founders of that capital and their nearest neighbours, whom they reduced to subjection. Consequently as the Romans extended their conquests, their language was adopted by the conquered, till various dialects thus forming themselves, the pure and original tongue of either, was lost. So difficult must it be to discover which of the two was the original, that I cannot conceive Mr. Galiffe's hypothesis, (of assigning it to the Russian because a resemblance between that language and the Latin is perceptible,) in any other point of view than highly conjectural.

I consider the affinity he has clearly shown to exist between those tongues, to be of infinite value; not that it corroborates or confirms the one to be the origin of the other, but because it is an additional proof of the indisputable fact, that as all nations are descended from one grand parent, so are all languages derived from one primal root, only varied, at the confusion of Babel, in the mode of its pronunciation: in other words, as Mr. Bryant judiciously expresses himself, a confusion of the lip, or a labial failure, not an alteration of language, took place on that catastrophe.

Who would have imagined the Irish characters to be the same with those of Thibet or India? It is a remarkable fact, that Col. Grant was alone enabled to decipher the Thibetian characters on the celebrated Siberian medal preserved in the museum at St. Petersburg, by his knowledge of the Irish tongue. By the medium of a language as strange and as unexpected, may not Roman remains be interpreted?

Mr. Galiffe's conjectures therefore open a new field of inquiry to antiquaries, by which they may discover the meaning of some of the oldest monuments of Rome, as suggested by the writer of an article inserted in your *Literary Gazette* (No. 192) signed "a Conjecturer." I am, however, much more inclined to believe, that were a trial made on the *Sanscrit* the truth might be elicited.

Considering Mr. Galiffe's speculations in this point of view they may be useful; but to believe it confirmed that the Russian language is really the origin of the Latin, I cannot consent. As the observations of Sir W. Jones and Mr. Halhed on the Sanscrit language, (the former the most profound linguist that ever lived, and few persons have perused and analyzed more oriental volumes than the latter), may not be deemed of little

importance as to the true origin of the Latin, I beg leave to insert them at length.

"The Sanscrit language," says Sir William Jones, "whatever be its antiquity, is of a wonderful structure: more perfect than the Greek, more copious than the Latin, and more exquisitely refined than either, yet bearing to both of them a stronger affinity, both in the roots of verbs and in the forms of grammar, than could possibly have been produced by accident: so strong indeed, that no philologist could examine them all three, without believing them to have sprung from some common source, which perhaps no longer exists: there is a similar reason, though not quite so forcible, for supposing that both the *Gothick* and the *Celtick*, though blended with a very different idiom, had the same origin with the Sanscrit; and the old Persian might be added to the same family.

"The characters in which the languages of India were originally written are called Nagari, from Nagara a city, with the word Deva sometimes prefixed, because they are believed to have been taught by the divinity himself, who prescribed the artificial order of them in a voice from heaven. These letters, with no greater variation in their form, by the change of a straight line to curves, or conversely, than the Cufick alphabet has received in its way to India, are still adopted in more than twenty kingdoms and states, from the borders of Cusgar and Khoten to Rama's Bridge, and from the Sindhu to the river of Siam: nor can I help believing, although the polished and elegant Devanagari may not be so ancient as the monumental characters in the caverns of Jarassandha, that the square Chaldaick letters in which most Hebrew books are copied, were originally the same, or derived from the same prototype both with the Indian and Arabian characters: that the Phœnician, from which the Greek and Roman alphabets were formed by various changes and inversions, had a similar origin there can be but little doubt."—Page 26, 1 vol. Asiatic Researches.

Mr. Halhed, in his preface to his grammar, considers that the Sanscrit was current not only over all India in its widest extent, but over all the oriental world; and that traces of it may be discovered in almost every region of Asia. He was astonished to find "the similitude of Sanscrit words with those of Persian and Arabic, and even of Latin and Greek, and that not in technical and metaphorical terms, which the imitation of refined arts and improved manners might have occasionally introduced, but in the groundwork of language in monosyllables, in the names of numbers, and the appellations of such things as would be first discriminated on the immediate dawn of civilization."—Page 3, Halhed's Grammar of the Bengal Language.

"If the Tartars," says Sir William Jones, as we have every reason to believe, had no written memorials, it cannot be thought wonderful that their languages, like those of America, should have been in perpetual fluctuation, and that more than fifty dialects, as Hyde had been credibly informed, should be spoken between *Moscov* and *China*, by

the many kindred tribes or their several branches. What those dialects are, and whether they really sprang from a common stock, we shall probably learn from many indefatigable men employed by the Russian court; and it is from the Russians we must expect the most accurate information concerning their Asiatic subjects. I persuade myself that if their inquiries be judiciously made and sufficiently reported, the result of them will prove that all languages properly *Tartarean* arose from one common source."

M. Galiffe perhaps could inform us what success the Russian court has made in this inquiry: it certainly does appear, as Sir William Jones judiciously remarks, that all languages properly Tartarean arose from one common source, as the Sanscrit and Hebrew: if this be true, there will be very little difficulty in accounting for the affinity between the Russian and Latin. Yet, since this affinity appears, no authority can be adduced in order to affirm the one springing out of the other, or that Russian is the original language of the founders of Rome.

In my humble judgment, therefore, I am of the same opinion with those who assert the Latin to be derived from the same source with the Phœnician and Greek. Diodorus Siculus ascribes the invention of letters to the Syrians, that term being understood to include Chaldean and Assyria. The oldest Syrian and Phœnician letters are allowed to have been the same. The Phœnicians afterwards emigrating under Cadmus, carried letters into Greece; and the striking resemblance both in form, sound, and arrangement, of the latter with the former, indubitably establishes their origin. From Greece the Pelagic colonies carried the Cadmean letters into Italy, evidenced also by the same circumstances of fabrication, arrangement, and sound.

As to their early stories of heroes and of fictitious warriors, the whole partakes so highly of the eastern allegory and fable, as to leave no room to doubt from whence they originated. If all their mythological tales, therefore, were to be analyzed, we should immediately discover the real characters so conspicuous in the early ages of mankind, shadowed out under pleasingly wrought fables, which the immediate preceding nations, the Egyptians and Grecians, taught the first inhabitants of Italy. I say then, if we examine every thing relative to the early establishment of the Roman nation, we shall not hesitate to pronounce it sprung direct from one of the first branches of the central country of mankind, and to renounce the idea of its having migrated, in a circular course, through those hyperborean regions, as Mr. Galiffe has laboured to establish.

If these reflections meet with your approbation, I am most happy in offering them to your notice. I am aware of being totally unworthy in point of composition of claiming your attention to these scattered remarks; but should they be honoured with an insertion in your truly excellent literary journal, which unites the "dullest of stile," I shall remain ever

Your constant reader,

W. V.

## ARTS AND SCIENCES.

### THE NORTHERN EXPEDITION.

We have at present very little to add upon this subject in the shape of narrative; but even a few gleanings and some observations may be acceptable.

It would appear from the hardships with which our countrymen bore the excessive cold to which they were exposed, that a good deal of exaggeration must belong to the accounts previously given of the sufferings endured in frozen regions. We never read of human beings existing at 55° below Zero, at more than 12° below the point at which mercury becomes solid; nor, indeed, at any thing like that temperature, without experiencing far greater inconveniences than seem to have attended our navigators. Captain Sabine's servant, to be sure, lost most of his fingers; and we understand, that another man also was deprived of all the end joints of one hand; ulcers on the face were the effects of incautious exposure; but we bear of no such fatal accidents as are common even in Russia. Our brave fellows stood the extremest weather with mufflers up to their noses and warm caps descending to their eyes and covering their ears; and after a little experience of the climate, they avoided casualties by very simple means. The person *bitten* was himself unconscious of the attack; but each "looking in his neighbour's face" as they went, warned his companion when he saw his nose grow white in consequence of the frost. Turning from the wind, and a few minutes gentle friction with the hand, (or if very much injured with snow,) invariably restored the circulation, and the tone of the part; and unless allowed to go too far, no pain whatever was felt. But when seriously affected, the agony of restoring the circulation was dreadful.

Beer, wine, and spirits became ice; the beer was destroyed, but the wine and spirits were tolerably good when thawed.

The ship's timbers were of the temperature of the surrounding element, and wherever the iron bolts and fastenings ran through, they became studded with rosettes of transparent ice. The most comfortable sleep was obtained by converting the blankets into large bags drawn at the mouth. Into these the slumberer crept, and some comrade, who kept the watch, closed him in by pulling the strings.

The visit of the bear, which we have mentioned, was a grand event. He came smelling up to the Hecla, when Captain Parry got out his gunsmen to dispatch him. Owing to some misconception of their directions they fired in platoon, and only wounded the shaggy monster, who retired growling and bloody. But the sport consisted in the general chase given by the crews of both vessels, who ran

\* Considering Mr. Galiffe's hypothesis as at least eminently curious, we challenged attention to it on reviewing his work; and it affords us pleasure to insert these sensible remarks of our anonymous correspondent. Not only letters, but history may be deeply indebted to philological researches of this nature.—Ed.

after him two or three miles, till he secured himself by crossing some ice. This chase was famous fun for our jolly tars, and enlivened their spirits when below Zero.

We omitted the notice of one very material fact in our last; a fact, which may be considered the most important of any ascertained, in so far as relates to the prosecution of future inquiries in these seas. Throughout the year, the wind blows almost constantly, either from the North, or from Northern points of the compass. And as soon as the sun begins to produce an effect, a radiation of heat from the land ensues, which by the height of summer, July and August, becomes very powerful and active. The result of these two operations of nature, is the loosening and release of the ice on the Northern coasts; and its consequent driving towards the South. Thus, instead of the southern sides of bays, straits, and seas, where navigators would plausibly look for channels of open water (under the supposition that they would be most likely to be found in the milder latitude), it actually happens, that the openings exist on the northern sides, where the radiation of heat, aided by the prevailing north winds, detaches the frozen mass from the shore, and blowing it off, leaves a passage between the ice and the land. On their return up Lancaster's Sound, the expedition reaped the benefit of this discovery, sailing on the north-side while the south was completely blocked up. Vessels hereafter sent to explore the arctic regions will, of course, be guided with reference to this principle; and thus, we doubt not, be enabled to reach more distant points, if not to achieve the famed North-West passage. It has been suggested, that as Cook could not enter Behring's Straits, no other navigators could issue thence; and therefore, that though the Polar Sea was attained from Baffin's Bay, that sea must be the limit of the utmost voyage. For the above reasons, we are inclined to question this theory, and especially as Hearne and Mackenzie both speak of open sea on the northern coast of America, to which, supposing the Prince Regent's Inlet of Parry to lead, there will then be no impediment to a passage into the Pacific except in Behring's Straits themselves; and we see no reason for thinking that these, following the same rules as Lancaster's Sound, may not be as practicable as that Sound, has been ascertained to be, though till now held to be impossible.

We have not many other particulars to state. Captain Parry, when out from the ships for three weeks, went entirely across Melville Island, and beheld the sea on the other side. It is evident, that the icy ocean here contains a mighty archipelago of islands, of which Greenland is probably the greatest. When travelling on land, our gallant countrymen hunted, and rested in tents like those of hucksters at a village fair. They were formed of boarding pikes, &c. and covered with sails and blankets. Sometimes they tried to eat the produce of their guns; but the foxes were very disgusting, and the musk-ox\* resembled the toughest beef stewed

in a musk sauce. The cause of the foxes being so much more distasteful than we have been told they are about Spitzbergen is, we presume, the want of that abundance of food from the seal, morse, &c. which their species finds in the latter country.

During their perbation, the Aurora Borealis was but once or twice slightly visible to the voyagers towards the north. Towards the south it was more vivid; but about the latitude of 60°, seems to be the seat of this phenomenon; and its appearance is not only much more brilliant from Newfoundland, but from the northern Scottish Isles, than from the Arctic Circle. Only one flash of lightning was observed by our sailors.

When the fine weather set in, several of the officers employed themselves in attempting to garden. Forcing under mats, as well as growing in the free air, was tried. One succeeded in getting peas to shoot up 8 or 10 inches; and these green stalks were the only green peas they devoured as vegetables. Radishes got to the second leaf on the soil of Melville Island. Onions and leeks refused to grow. In the ships small salad was produced for invalids; happily, the scurvy never got the ascendancy.

Other officers were engaged in erecting monuments upon the heights to commemorate the extraordinary circumstances of the expedition. Huge cairns, by these means, crown the most obvious hills, and remain the rude but proud monuments of British daring, with inscriptions to tell the date, and inclosing bottles, in which the principal events of the voyage are written and sealed up.

It was on their way home, when far down Davis's Straits, that Captain Parry fell in with two families of Esquimaux, of whose residence he was apprized by a whaler. He accordingly visited them, and they in turn visited the ships. They betrayed none of the terror which filled the tribe seen by Captain Ross; but accepted the beads and knives presented to them with inconceivable joy. Indeed their raptures were so excessive, that it was with the utmost difficulty one of them could be made to sit still while his portrait was sketched. He was continually starting and jumping up, shouting *ugh! ough!* and playing off the most violent contortions of joy; which were participated by his comrades, when they witnessed the picture. Several of the officers accompanied Captain Parry to their huts, where they saw their women and children. The former, instructed by their husbands, who had learnt it from the sailors on their visit to the ships the day before, ran out and shook hands with the strangers. There was one pretty looking girl of twelve or thirteen years of age. The children were horribly frightened, and roared lustily in spite of beads and toys. The whole number of natives was about twenty. They had probably seen or heard of Europeans before. No arms were observed among them; but one of the little boys had a miniature bow and arrow, which showed their acquaintance with this weapon. The skins of the animals they had killed seemed to be pierced with arrows as well as spears.

Taking leave of them about the end of the

first week in September, the expedition steered homeward. The ships were separated by a tempest, and the Griper waited seven days for the Hecla at the rendezvous in Shetland; but the latter suffered so much damage, as to be compelled to steer directly for Leth. They are now both at Deptford.

We hear that a vessel fit for the service has already gone into dock, to be made ready for another voyage of discovery next season.

#### LITERATURE & LEARNED SOCIETIES.

*The freedom of the press!*—This invaluable blessing is not only theoretically advocated, but practically illustrated, by the generality of our newspapers. Take an example. The Literary Gazette of last Saturday contained some original accounts of the Arctic Expedition, and of Lord Byron's Tragedy, which have since occupied the pages of almost every print in the metropolis, and, as far as we have seen, in the country. We made no boast of the diligence or means through which we procured such articles, but it will readily be suggested to the public mind, that our work could hardly be furnished with its weekly contents without very considerable exertions in every way. It is therefore somewhat illiberal in journals, appearing only a few hours later, to transcribe into their pages, without acknowledgment, and as *their own*, what has cost us no small pains and expence to obtain. It is almost a scandal to a paper like Bell's Sunday Messenger, for instance, to introduce its copy of our northern communication with "desirous to supply as much intelligence as we could obtain on the subject of this interesting expedition, *see* *hate*," &c. and its transcript of our account of Faleri, with "the tragedy about to be published by Lord Byron naturally excites a degree of expectation and curiosity commensurate with the fame of the author; and we have endeavoured in some measure to gratify this feeling;" and "with this view, referring to several works, we found that Sismondi," &c. Now all these assertions are essentially falsehoods; for it was not Mr. Bell's *Wre*, but *see* of the Literary Gazette, who supplied the intelligence and endeavoured to gratify the public feeling, and waded through many volumes to accomplish that wish. Yet Mr. Bell's *we* wear a black patch on their foreheads, to distinguish themselves from pilferers and imitators; and they have complained lustily against frauds and

\* Qu. Jujubes!—Ed.

\* We have tasted a morsel of this *carion*: it is abominable.—Ed.

impositions of this sort. It was natural, therefore, to expect more just behaviour in them, than in the Observer, whose avowed principle is, get where and how you can, *per fas aut nefas*; or the Herald, which robs us even of our Wine and Walnuts, without allowing us our desert, though these papers were announced as book copyright intended for separate publication; or, indeed, most of the other periodical prints, which on their modest faces entitle themselves to all our dearest labours, though at no trouble beyond sending one of their devils, and six-pence halfpenny (trade price), to our office No. 362, in the Strand. This is part of the *freedom* of the press, which we call on our contemporaries to abridge. The editorial *We*, though convenient and extensive in its peculiar circle, does not of right belong to a congeries of circles; and we protest against being *see-ed* out after this fashion. Especially, as we have some opinion of his honesty, do we call on Mr. Bell, as he values his Sunday reputation, to abstain from these unconfessed sins and trespasses against us; otherwise he will stain his black-browed honours, and seem no better than other knaves, who make the liberty of the press consist in a constant breach of the eighth, and an everlasting oblivion of the tenth commandment (not to mention the fourth, upon the direct contravention of which our sabbath-breaking brethren live and fatten).

#### CURIOUS MANUSCRIPTS IN THE IMPERIAL LIBRARY AT VIENNA.

I have visited, (says a traveller), the Imperial Library at Vienna, where I have seen many curious manuscripts, for instance:

1. *Senatus Consultus de Bacchanalibus* coerced. An ordinance of the police, on a metal plate, relative to the prohibition of the Bacchanalia, written and hung up in Rome, in the year of the city 567; that is, 186 years before the birth of Christ.

2. The Map of the Itinerary of Theodosius the Great, on parchment; of the fourth century: the whole of the known world is represented upon it, stretched out like a long zone. They had not, at that time, the slightest notion of the true position of countries: the Mediterranean Sea is drawn like a narrow river, and Italy like a thin stripe. The far more correct notions of the Greeks in earlier times were wholly forgotten at this barbarous period.—N. B. Pompeii and Herculaneum are marked on this map.

3. Twenty-six quarto leaves of parchment of the first Book of Moses, adorned with many pictures. Written in large letters, in the Greek language; of the fourth century.

4. Latin fragments of the four Evangelists; of the fourth century.

5. *Herbarium Dioscoridis*, in Greek, on parchment, with coloured plants; of the fifth century. The plants (excepting the want of shade) are well and elegantly designed. The learned Hungarian, Angerius Busbeck, who was internuncio (or envoy) at Constantinople for the Emperor Ferdinand I., brought this book to Vienna in the tenth century.

6. The last five Books of Livy; of the fifth century.

7. Fragments of the Gospel of St. Luke; of the sixth century.

8. An *Horarium*, or Prayer-Book, which formerly belonged to Hildegard, consort of the Emperor Charlemagne, who died A. D. 783. The book is on parchment, with golden letters.

9. A parchment Codex, St. Paul's Epistles to the Romans, with Origen's Paraphrases; copied in the eighth century, by one Windbar, and, as the writer says in some Latin verses, corrected by the Emperor Charlemagne with his own hand. Here therefore I have seen the hand-writing of Charlemagne: if it is really his, he wrote a good hand.

10. Mexican Hieroglyphics, painted in Mexico, upon buck-leather, and presented by Ferdinand Cortez to the Emperor Charles V. These hieroglyphics are now as little understood as those of Egypt. Cortez thought they must be devilish emblems, or magic images. I have obtained an impression of them on copper. Humboldt has brought similar things with him, which he shewed me at Berlin in 1806.

11. An *Evangeliarium*, in golden letters, on parchment, with painted initial letters and five miniature pictures representing the lives of the evangelists, executed in the year 1368, by a priest of the name of John of Silesia. The cover is of wrought silver.

12. Two Prayer-Books of the 15th century, with many miniature paintings: they both belonged to Maria of Burgundy, consort of the Emperor Maximilian I. They were written and painted in Flanders.

The Imperial Library is large and handsome, like a lofty church with pillars. There are innumerable books bound in red morocco. There is a reading-room, but it is very small; nobody is permitted to go into the library, nor can any one take a book home with him.

#### ROYAL SOCIETY.

Sir H. Davy was on Thursday elected president of the Royal Society, vacant by the death of Sir Joseph Banks.

The subject of the English poem for the Chancellor's third gold medal for the ensuing year is "*Evening*."—*Can. Chron.*

#### ORIGINAL POETRY.

[By Correspondents]

##### IMPROMPTU.

On the congregation who visited St. Paul's with the Queen.

Away, ye democrats! now hide your heads;  
Your tongues 'gainst royalty be rais'd no more;  
Own that it has accomplish'd this great end—  
The sending those to church who never went before.

C. J. R.

Yorkshire, Nov. 21st.

Sir,—My London relation having thought proper to send you my letter, I have enclosed one of his, which you will perhaps think as

much too long as it was found too unreasonable by his country cousin.

London.

This morning I sent by the coach,  
Your basket of various wares,  
And trust that I shall not encroach,  
By enclosing a shawl of your aunt's.  
It was sent to be dy'd a deep blue,  
But could not—you need not say why—  
For the fact is (I only tell you)  
'Twas too old and too shabby to dye.

I have put in some stockings to mend,  
And beg you will net me a purse;  
New wristband the shirts which I send,  
Which for wearing are getting the worse.  
Old Debby has plenty of time—  
You're an excellent giver of hints,  
Of garters I thought all the time,  
When I got the white worsted at Flint's.

All your excellent pickles are done;  
I am glad that the season draws near,  
When you think 'of your dear absent one'  
Who cannot partake of your cheer,  
Except in the shape of goose-pie,  
A turkey, or basket of game;  
And such things as one cannot buy—  
In London scarce known but by name—

Such as thick bottled-corn and spice-cake,  
Your wiae-sours, deliciously fine,  
The sweetmeats they tell me you make:  
Not to mention your gooseberry wine,  
Which Sir Thomas, my intimate friend,  
Protested, again and again,  
(As he begg'd for some more I would send,  
Was superior to any Champagne.)

A pot of such raspberry jam  
As your's, I have sought for in vain;  
And sure such a nice little ham  
I never shall meet with again,  
As that which was sent by your ma:  
Bless me! I had nearly forgot  
To beg you will thank your papa,  
For the couple of wild ducks he shot.

I should like you to get me a dog—  
Perhaps you're a good one to spare;  
You can send it by some stupid log,  
That will bring it scot free; but take care  
That he does not expect a spare bed;  
I will give him a dinner or so—  
I got nothing by harbouring Ned,  
Some two or three winters ago.

There's a man that makes nice walking sticks,  
It is not many miles from your farm;  
I wish you'd ride over and fix  
On one like my uncle's at Yarm.  
And get me a skin nicely dress'd—  
A sheep's, buck or doe's, I don't care,  
For rugs they're decidedly best—  
What I purchase in London soon wear.

For my time I have made you no charge,  
Nor coach-hire for popping about;  
But I'll not on such trifles enlarge—  
You will pay me in some way no doubt.  
Your papa may look out for a horse,  
And consult ma,—I must not pay dear;  
He will think it no trouble, of course,  
Remembering for what you send here.

C. E. A.

Epigram modernized.

To a deep scholar, said his wife,  
"I wish I were a book, my life,  
"On me you then might sometimes look.  
"But I would be the very book,

"You would with greatest pleasure see :  
 "Then, say what volume shall I be?"  
 "An almsack," said he, "my dear ;  
 "You know we change them every year."

### SKETCHES OF SOCIETY.

To the Editor of the Literary Gazette.

LETTERS FROM A DISTINGUISHED PERSON-  
 AGE.—LETTER II.

Sir,—In my last letter I pointed out a few of the distinguishing marks by which my followers will be able, in future, to trace in one another's features and conduct, their mutual relation to me, from their subserviency to its purposes I am supposed to have in view. This I did from no motives of vanity, (though princes can boast of subjects so numerous as those who own my sway) as I am aware that the multitude of my disciples is increased by the influence of silent unostentatious example. But in the present state of society, I have no fear that either reason or ridicule will materially lessen the number of those who act on my principles ; and with just confidence in their leader, they may add confidence to all that reason can urge, ridicule expose, or religion threaten. Besides, the display of preponderating force often supercedes the actual trial of strength ; and though I should not decline the contest, it perhaps the less that is said about the principles of those who oppose me, the better for my cause.

Though, from your intercourse with the world, Mr. Editor, you must have been long convinced, even though the clergy had been silent on my exploits, of the vast influence I possess over the minds and bodies of your race, yet perhaps it never entered into your mind over what immeasurable paces, and by what countless millions, I am adored as a Divinity. Among the followers of Mahomet, and even in Europe, how few are there who conscientiously follow the precepts of the Koran, or the infinitely more important doctrines of the Bible ! How few a comparison of those who bow their heads to my diversified shrines. Although no temples rise in your country in honour of my name, yet even there, never was Divinity so extensively worshipped ; and the number of my followers in the very city of London, as proved to a certainty that the essentials of my worship may be continued from age to age, without the formality of legal establishment, or the sanction of a bench of bishops. Wherever human habitations exist, am venerated and adored in a thousand forms. From India to Iceland,—from America to Europe—my votaries appear in numbers which almost darken conception. My rites are so simple, the duties I exact so accommodating to all that man fancies of pleasure, that in my system there is no need of bridles upon conduct nor restraints upon character. The European worships me in its exclusive pursuit of selfish and temporary interests ; and the Indian "sees me in the whirlwind," and recognises me in the storm. How many myriads daily approach me in the temples of *Fanity*, bow down before me at

the altar of *Ambition*, and confess my power in the receptacles for the enjoyment of unhallowed *Pleasure* ! By millions I am figured and revered as the goddess of *Fortune* ; sought eagerly by crowds in the shape of *Fame* ; and in all the courts of law in the world, I am pictured with balances under the form of *Justice*.

It is very well known that I am the patron of all those who hold opinions which tend to represent man as an automaton, and the world as a machine ; but it is not equally notorious, that I give the chief impulse to those hodies, so numerous in every country, who substitute, by my means, their own morbid feelings for the simple precepts of what you call your Sacred Writings. I to them make melancholy and austerity appear the indubitable marks of devotion ; animal feelings the substitute for reason ; and the dreams of a distempered imagination the test of infallible truth. I prompt the spiritual delirium of those who assert that they are buffeted by me ; and I dictate all those discourses which teach the doctrine (my own doctrine certainly) that faith and feeling are superior to reason and revelation. In one word, bigotry and intolerance are mine, whether they proceed from the establishment that raises the cry of "no popery," or the poor uneducated and blinded catholic, who trusts to the Viceroy of St. Peter for admission into the eternal happiness of an immortal spirit.

But to return from this digression, which may make many of my followers think I am turned monk, or methodist, I may observe, that one of my chief amusements is to preside over the ever-varying fashions of female attire. I taught the fairest part of your creation, when excess had tarnished the roses of their cheeks, to substitute, for the colour of health, artificial roses ; for be it known, that *rouge* was first invented by me, to serve a few particular friends, who were anxious to retain the semblance of health and modesty, when the substance had departed from their cheeks for ever. I, in concert with a few devoted admirers, leaders of the fashions of Paris and London, shortened the petticoat, till it had almost ceased to afford the shade of a fig-leaf ; and it was I (with the best intentions in the world you may presume) who first hinted, in an assembly of ladies, all my special acquaintances, that nature never meant their lovely necks and bosoms, or even any part of their bodies, to be concealed by unnecessary envelopes of silk, muslin, or lace ; and I succeeded in convincing them, and the thousands who have since followed their example, that they might as well shroud their faces in handkerchiefs, as conceal a part of their form upon which nature had lavished so much beauty. So kindly were my hints taken, that, had it not been for the affected modesty of the other sex, and some ill-directed effusions of popular feeling, the ladies might, in spite of the climate, have carried their dress, or rather their undress, the length of complete nudity :

" ————— for loveliness  
 Needs not the foreign aid of ornament,  
 But is when undress'd, adorn'd the most."

In concert with a fashionable French dress maker, I invented the gown with artificial bosoms, for ladies who are deficient in these becoming prominences—gave the hint for cushions to assist the shape, for those who required bulk in a lower direction :—and invented a pad which, had it been generally adopted, would have made all the ladies in civilized Europe look as "ladies wish to be who love their lords." In short, all those pieces of dress which make the fair seem other than they really are, and are thus intended to deceive, are the fruit of my ingenuity, and meant to forward my purposes ; and I hope you do not think it illogical in me to conclude, that those who adopt the deception assist me in my views. A plume of feathers at a midnight ball has waved more than one pretty lady into my hands ; and the anxiety to display a new bonnet, Spencer, or pelisse, has thrown thousands of the fair into my arms.

I need scarcely say that I am the inventor of all those delightful and interesting recreations, which my enemies have nicknamed gambling ; that balls, routs, and assemblies, are modes in which my worshippers of a certain class pay their homage at my altars ; and that I am the undisputed patron of all those unprejudiced fair ones, who, freed from the fetters with which virtue and religion have shackled their votaries, have, if your legends were true, ruined their present, and forfeited their future happiness.

The establishment of circulating libraries was also a suggestion of mine ; and the information so liberally doled out to young masters and misses from these magazines of instruction, is quite to my taste. The imagination once inspired by passion, and the heart melted by love (and who would subscribe to a library that was not well stocked with tales of love ?) my business is more than half done. If a Damon want a Phillis, I am not long in finding one to his mind ; and if a disconsolate damsel is seized with a sighing for a favourite knight, I take care she shall not long sigh in vain. In fact, I know of no establishments where the knowledge of good and evil is more speedily and practically acquired.

To conclude, I am the patron of all nurses, tutors, and governesses—those necessary and useful classes of people, who so agreeably relieve parents of the charge of superintending their offspring, and of forming their minds for time and for eternity ; for I look upon the sympathies of kindred as a narrow-minded prejudice, and the relations of life, except in so far as self-interest and pleasure are concerned, as little worthy of rigid observance. By the bye, I am not aware that your antiquaries know that the bear which suckled Romulus was really a woman, but metaphorically called a bear, because she was only his nurse, not his natural mother—though I think I once hinted the circumstance nearly three hundred years ago, to Henry Stephens the printer.

I am, dear sir, yours sincerely,  
 SATAN.

## THE DRAMA.

**DEURY-LANE.**—Pizarro was performed on Monday; Pizarro, Booth; Rolla, Wallack; and Alonzo, Cooper. The popular sentiment which gave color to this melo-drama at its origin, has long since subsided; and its intrinsic qualities are insufficient to support it during more than a very few nights in a season, even should it happen to be admirably cast throughout. In the present instance it was not so. Booth's Pizarro was suited to any booth; though we cannot say, that his playing was at all fair. Wallack's Rolla, lingered in all the early stages, but improved much towards the close; and he went through the impetuous scenes with uncommon fire and spirit. This confirms our opinion, that his forte is not the philosophical of Hamlet, nor the pathetic of any tragic hero; but the wild and fierce, which approaches the confines of Bandit chiefs, and of other parts requiring passionate action and energetic delineation. For these, his physical qualifications peculiarly fit him; and in such he must produce vivid effects. Cooper's Alonzo was of the middling order, like the character.

*Justice, or the Caliph and the Cobler.*—We can hardly do justice to this pseudo-musical drama, brought forth on Tuesday. With enough of interesting incident and situation, and enough of humour and equivoque, to constitute a very capital Entertainment, music, dance, procession, and the spinning out of the dialogue, serve only to stretch it out into the regular drama length of three acts, and mar what would otherwise have been exceedingly amusing. It seems as if a Farce had been put on the manager's bed of Procrustes, and dislocated into a first piece; and truly, the music is so bad that it may well pass for the groans and shrieks of the tortured patient. We think it evident, that these additions do not proceed from the pen of the original author, whoever he may be; for report ascribes the play variously to Mr. C. Dibdin, to Mr. Faucit a provincial manager, and to Mr. Jameson, brother to the gentleman who has written several successful dramatic works. The scene is laid in Bagdad. *Haroun Alraschid*, (Cooper,) in one of his nocturnal rambles, picks up a poor Cobler, called *Kaled*, (Harley,) who is denied his love *Monsel*, (M. Vestris,) by her father *Mustapha*, another Cobler, (Gattie,) because he is a foundling without relations; and also another subject, *Abdallah*, (Wallack,) the son of a quondam rich merchant, *Muley Hamet*, who is now impoverished, the victim of a conspiracy, and imprisoned in prison. It happens, that the conspirators are *Khaled Osmia*, *Kayled Hassan*, (Williams and Bromley), &c.; and that the daughter of the former, *Selimia*, (Miss Kelly,) is the constant love of *Abdallah*. The Caliph, with his vizier *Giaffer*, (Footie,) engages in the affairs of his two protegés, *Kaled* and *Abdallah*. The Cobler, he pretends to raise to high ministerial dignity, which procures him a multitude of relations and presents of great value. The young merchant's business

does not go on with so promising an aspect. *Selimia* robs her father of the bond on which *Muley Hamet* is imprisoned; and though both *Abdallah* and his mother, *Zebudah*, (Mrs. Egerton,) reject the blessing dishonourably obtained, the son is arrested for the theft; and appearances are so unfavourable, that the Caliph condemns him. *Selimia*, however, rushes in and confesses the crime; the conspiracy is unfolded, the worthy rewarded, and the unworthy doomed to punishment. The comic portion is smartly carried on by the Cobler and his connections; and the rejection of the bond by the honest family in their utmost wretchedness is a very good specimen of the pathetic. The trade of *Kaled* furnishes puns from the sole to the uppermost works; but the author has augmented the humour by several grotesque situations, and some very sprightly witticisms of a better order. A scene in which old *Mustapha* measures the new minister for slippers, is highly amusing. The performance was generally good on the first night. Harley was full of fun; and did not more than once or twice play the clown, as in sliding off the Ottoman, and descending to tricks of that sort. Wallack was impressive, and looked a handsome Mussulman. Miss Kelly was superbly dressed, and did the little she had to do admirably; and Mrs. Egerton seconded her exertions, as far as her slight character permitted. Cooper was beyond measure pompous and turgid in his Caliph. His declamation in your King Cambyses vein, was alike to the merry and the sad; and the sepulchral tones in which he addressed the Cobler, were quite absurd. To be sure, he had the iniquity of the clap-traps (with which the Drama was stuffed like plums in a pudding,) to deliver, and he meted them out with becoming formality. M. Vestris had but one scene to act in; and the other characters were of inferior consequence. The piece was altogether well received; and a smart Epilogue, pointedly spoken by Miss Kelly, confirmed the decision agreeably to justice. The scenery is pretty: the songs are miserable.—*es. gr.*

## Chorus of Fishermen.

"Amen! and now our prayers are said,  
Our prophet's blest ablutions made,  
And in the wind our white sails set;  
On board my hearts, and ply the oar,  
Nor fear that heaven will bless our store,  
All will be fish that comes to net."

The only comic song is the following, by *Kaled*.

Two clowns once disagreed,  
A ploughman and a sawyer;  
Both trudg'd away and fee'd,  
Old Sly, the village Lawyer.

Quoth Sly, "Boys up your spirits pluck,  
Here, make your whistles moister,  
You're just in time to take pot luck;  
Suppose we have an oyster."

Toi loi de rol, &c.

Away went law and strife,  
Down sat each gaping catfish;  
Sly takes his oyster knife  
And opens a fine fat Native:

"Behold," quoth Sly, "what Law can do,  
"Twill no injustice foister,  
There's a shell for you, and a shell for you,  
And I will eat the oyster."

Toi loi, &c.

Last night I was attack'd,  
And thump'd by drunken Sadi;  
Says I, how shall I act?  
I'll go and tell the Cadi;  
"I'll seek the house where Justice dwells,  
And trounce the swaggering royster."  
But I thought of Sly and his couple of shells,  
And resolv'd to keep my oyster.

Toi loi de rol, &c.

**COVENT GARDEN.**—The only novelty at this theatre has been the revival of *Catherine and Petruchio*, the principals by Mr. and Mrs. C. Kemble. Their performance challenges praise, but no criticism. The Petruchio is the best we have seen on the stage; resembling in excellence the Rob Roy of Macready. It has all the refined roughness which the assumption of a temper not naturally belonging to the character of the person demands, and is as far removed from habitual vulgarity, as truth and discrimination can possibly dictate. The Catherine is portrayed with equal justice, haughty, rebellious, humbled, and rendered affectionate by feeling the predominance of a master spirit. A Mr. Vandellhoff is announced at this theatre. He is of provincial celebrity, and, we understand, a very powerful actor; rather inclining to draw a coarsely vigorous outline of his parts, than to mark them throughout with nicety of tact.

## FOREIGN DRAMA.

The celebrated Oelenschlaeger, author of several much admired Tragedies, and other works, has just completed a new Tragedy, called *Erich and Abel*, which is expected to be shortly represented on the theatre at Copenhagen. A new Tragedy, called *Ezzelino*, written by Professor Kruse, was performed at Copenhagen on the 20th of November.

There has been a sort of O. P. tumult for several nights at the Paris Theatre Français, in consequence of an augmentation of the admission prices. The journals jested on the subject of the rioters bawling out "*our six sous! our six sous!*" when Joad the grand-priest, and Aher, the brave general of the Jews, were upon the stage; as if such petty coins were known in Jerusalem. The malcontents have however carried the point, and the prices have been reduced to the old standard.

There have also been some theatrical disturbances at Naples: the audience at the Grand Theatre turning *non mente*, their backs on the performers, and conversing together as if in a coffee-house.

## VARIETIES.

The Danish sculptor Thorvaldsen passed through Troppau for Warsaw, (where he is to execute a monument to Prince Schwartzenberg,) while the sovereigns were there, and was graciously noticed by the Emperor Francis. "Thus should desert in arts be crowned."

A letter from Cracow mentions that Catalani was present there at laying the

foundation stone of the monument in honour of Kosciusko, and subscribed half the produce of one of her concerts to this patriotic work.

Captain Freycinet, the French navigator, arrived at Havre on the 13th ult. from Rio Janeiro, whither he went after his wreck. The *Panthere* arrived on the same day at Bordeaux, from the Isle of Bourbon, with a collection of objects in natural history.

To the Editor of the Literary Gazette.

Sir,—In reply to your correspondent's inquiry relative to the formation of pearls, please to receive the following account.

In the Portland Museum, sold by auction in 1786, was a large and fine specimen of the *Mytilus Plicatus* (Solander), a fresh water shell from China, each valve having a row of six pearls, all furnished with stalks, explaining an artifice made use of by the Chinese, in assisting nature in the formation of pearls, by fastening knobbled wires on the inside of the shell, while the animal was living, which was afterwards replaced in the river or other place it was originally in, and in process of time, coated the wires over with the pearly substance of the shell. This specimen (M. P. 3910) was next in the collection of M. De Calonne, sold in London in 1797, and perhaps is now in the British Museum; but of this I am not certain.

I am, Sir,

Yours respectfully,  
Nov. 27, 1820. A. LINCOLNE.

#### IMPORTANT DISCOVERY.

The celebrated French chemist, Mr. Gay-Lussac, is stated to have made a very valuable discovery of a means to render the most inflammable substances combustible without flame and without fire. These bodies are consumed without properly catching fire; or in other words, without feeding or propagating the fire. Muslin prepared after the process of the inventor, has been exposed to the flames, and was consumed without producing even a spark. This discovery, though now first publicly announced, is said not to be of recent date.

*Periodical Literature.*—One of our periodical contemporaries (by the bye we intend, some time or other, giving our readers an account of all the family of Journals, Chronicles, Talismans, Indicators, Honeycombs, Londoners, Dégénérés, Registers, &c. &c. of which the Literary Gazette has been the prolific source,) made us laugh at a genuine triple bill in one of his poetic effusions the other day. After narrating the death of the hero, he thus mentions his widow, who comes to hear a "dull-eared voice."

Poor Mathews' wife, a sweet young village maid!  
The same classic authority tells of a person who "thrust all his fingers into his mouth except his—thumb!"

The French National Almanach for 1821 has an epigraph to this effect—"France is the only country in the world which can claim the honour of having produced a celebrated personage on every day in the year!" What a trait of national character!

In a late Number, we noticed a super-scription so lucky as not to contain one letter of the name of the party to whom it was addressed. The same fate happened to the simple word "*usage*," at a village ale-house, where man and horse were assured of having it good: it was spelt "Yowsiah."

One of the performers of the Paris Académie Royale de Musique, lately absented himself without leave: on being remonstrated with on the folly of such conduct, he replied, "You are quite mistaken; a good musician always knows when to indulge in a fugue."

#### CANNIBALISM.

Mr. Leigh, a Missionary recently returned to England, relates the following story of Cannibalism, which occurred during his residence of six weeks at New Zealand. "One day, while Mr. Leigh was walking on the beach, conversing with a native chief, his attention was arrested by a great number of people on a neighbouring hill. He inquired the cause of such a concourse, and being told that they were roasting a lad, and had assembled to eat him, he immediately proceeded to the place, in order to ascertain the truth of this appalling relation. Being arrived at the village where the people were collected, he asked to see the boy. The natives appeared much agitated at his presence, and particularly at his request, as if conscious of their guilt; and it was only after a very urgent solicitation that they directed him towards a large fire at some distance, where they said he would find him. As he was going to this place he passed by the bloody spot on which the head of this unhappy victim had been cut off; and on approaching the fire, he was not a little startled at the sudden appearance of a savage looking man, of gigantic stature, entirely naked, and armed with an axe. Mr. Leigh, though somewhat intimidated, manifested no symptoms of fear, but boldly demanded to see the lad. The cook, for such was the occupation of this terrific monster, then held him up by his feet. He appeared to be about fourteen years of age, and was about half roasted. Mr. Leigh returned to the village, where he found several hundreds of the natives seated in a circle, with a quantity of coomery (a sort of sweet potatoe) before them, and waiting for the roasted body of the youth. In this company were shewn to him the parents of the child, expecting to share in the horrid feast. After reasoning with them for about half an hour on the inhumanity and wickedness of their conduct, he prevailed on them to give up the boy to be interred, and thus prevented them from consummating the most cruel, unnatural, and diabolical act of which human nature is capable."

#### LITERARY NOTICES.

Barry Cornwall, stimulated, we presume, by the recommendations of most of the critics upon his Dramatic Scenes, Marcian Colonna, &c. to direct his attention to the acting drama, for which his genius seemed to be so well suited, has, we learn with pleasure, finished a Tragedy entitled *Mirandola*, and

presented it for representation at Covent Garden. It would be injurious to say how highly report speaks of it. We hear of following tragedies by distinguished writers; but who will produce us that *rara avis*, a sterling comedy, in these dull times?

We noticed in some remarks on periodical publications in our number 200, the superior manner in which such works as the Monthly Magazines are now edited, to what they formerly were. A better proof of honourable rivalry in this respect can hardly be adduced, than by stating, that a gentleman of Mr. Thomas Campbell's talents and celebrity, has undertaken the editorship of one of these—the New Monthly.

We observe in the Newspapers, that Messrs. Colburn and Co. have reclaimed against a pretended publication of *Fanny Morgan's Italy*, announced by Nicolle and Ladvocat, of Paris. They style it a gross imposition, and affirm that not a page of the MS. has yet left the Lady's hands.

Southey's *Life of Nelson* is among the latest Parisian translations from the English. The French writers call our hero the English Suffren.

#### METEOROLOGICAL JOURNAL.

NOVEMBER 1820.

Thursday, 23 — Thermometer from 40 to 47.

Barometer from 29, 87 to 29, 69.

Wind E. b. S. 1.—Generally cloudy till the evening, when it became clear. Raining all the morning.

Rain fallen, 45 of an inch.

Friday, 24 — Thermometer from 22 to 43.

Barometer from 29, 68 to 29, 83.

Wind S. W. 4.—A white frost and fog in the morning, and generally cloudy with a little rain. A fine haze formed round the moon, at 6 o'clock this morning.

Rain fallen, 15 of an inch.

Saturday, 25 — Thermometer from 41 to 49.

Barometer stationary at 29, 76.

Wind S. E. 4.—Generally cloudy; sunshine at times.

Rain fallen, 95 of an inch.

Sunday, 26 — Thermometer from 39 to 52.

Barometer from 29, 94 to 30, 09.

Wind S. b. E. 1.—Clouds generally passing; sunshine at times.

Rain fallen, 15 of an inch.

Monday, 27 — Thermometer from 38 to 50.

Barometer from 30, 09 to 30, 15.

Wind S.b. 4.—Cloudy and clear alternately; the changes very rapid in the evening. The upper part of a halo round the moon, between 5 and 6 in the morning.

Tuesday, 28 — Thermometer from 34 to 47.

Barometer from 30, 25 to 30, 36.

Wind N. E. 1 and 2.—Generally cloudy.

Wednesday, 29 — Thermometer from 35 to 48.

Barometer from 30, 43 to 30, 46.

Wind N. E. 4.—Generally cloudy.

Edmonton, Middlesex. JOHN ADAMS.

#### TO CORRESPONDENTS.

Q. P. is widely mistaken in the gist of the letter he mentions: let him read with but common attention, and he will see that the most moral objects are pursued under an amusing disguise.

Our Paris Letter has not arrived this week.

A pressure of matter compels us to postpone notes on the *Brazils*, Count Gólschki's Letters, and many other articles of various descriptions.

## BOOKS PUBLISHED THIS DAY.

**I.**  
**NARRATIVE OF THE OPERATIONS AND RECENT DISCOVERIES** within the PYRAMIDS, TEMPLES, TOMBS, AND EXCAVATIONS, in EGYPT AND NUBIA: and of a Journey to the Coast of the Red Sea, in search of the ancient Borealis, and another to the Oasis of Jupiter Ammon. By G. BELZONI. 4to. with a portrait, 2s. 2s.

**II.**  
**FORTY-FOUR COLOURED PLATES**, Illustrative of the Researches and Operations of G. BELZONI in EGYPT AND NUBIA. Folio, 6s. 6d. Printed for John Murray, Albemarle Street.

*Important Works.*

Recently published by Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

**NOVELS AND TALES** of "The Author of Waterley," comprising Waterley, Guy Mannering, the Antiquary, Rob Roy, Tales of my Landlord, First, Second, and Third Series; with a copious Glossary, 12 vols. 8vo. 7s. 4d.

*Ivanhoe*, a Romance; by the Author of Waterley. 8 vols. 12mo. 1s. 10s.

The Poetical Eclogues; or, Ten Conversations on English Poets and Poetry, particularly of the Reigns of Elizabeth and James I. By J. Payne Collier, of the Middle Temple. 2 vols. 8vo. 1s. 1s.

*Macbeth* Poems. By Sir Walter Scott, Bart. 8vo. 1s.

*History of the Indian Archipelago*, by John Crawford, F. R. S. late British Resident at the Court of the Sultan of Java. 3 vols. 8vo. with thirty-five illustrative Maps and Engravings, 12s. 12s. 6d.

An Account of the Arctic Regions, with a History and Description of the Northern Whale Fishery. By William Scoresby, Jun. F. R. S. E. 2 vols. 8vo. with twenty-four illustrative Engravings, 12s. 2s.

A Journey in Carlsbad, Italy, and France, in the Years, 1817-18. By W. A. Cadell, Esq. F. R. S. 2 vols. 8vo. with thirty-three illustrative Engravings, 11s. 6d.

*Travels in the North of Germany*. By Thomas Hodgkin, Esq. 2 vols. 8vo. 1s. 4d.

*Travels in Italy, Greece, and the Ionian Islands*, in a Series of Letters. By H. W. Williams, Esq. 2 vols. 8vo. with twenty engravings from original Drawings, 21s.

A Statistical, Political, and Historical Account of the United States of America, from the Period of their first Colonization to the present Day. By D. B. Warden, Esq. 3 vols. 8vo. 2s. 2s.

An Account of the Kingdom of Nepal. By Francis Hamilton, M.D. 4to. with engravings, 2s. 2s.

Sermon, preached in St. John's Chapel, Edinburgh. By Daniel Sandford, D.D. 8vo. 12s.

A Description of the Western Islands of Scotland, including the Isle of Man. By J. Macculloch, M.D. F. L. S. 2 vols. 8vo. with a volume of illustrative Engravings in 4to. 3s. 3s.

Geographical and Statistical Description of Scotland. By James Playfair, D.D. Principal of the United College of St. Andrew. 2 vols. 8vo. with a Map of Scotland, 11s. 4d.

A History of the Reformation in Scotland, with an Introductory Book, and an Appendix. By George Cooke, D.D. Minister of Laurencekirk. Second edition, 3 vols. 8vo. 11s. 11s.

A System of Mineralogy. By Robert Jameson, Professor of Natural History in the University of Edinburgh. Third edition 3 vols. 8vo. with numerous plates, 21s. 16s.

Observations on the Use and Abuse of Mercantile Medicines, in various Diseases. By James Hamilton, Jun. M.D. Professor of Midwifery in the University of Edinburgh. 8vo. 7s. 6d.

A Mineralogical Nomenclature, alphabetically arranged, with Synoptic Tables of the Chemical Analysis of Minerals. By Thomas Allan, Esq. F. R. S. E. Third edition, 8vo. 12s.

Essays on the Morbid Anatomy of the Human Eye. By James Wardrop, F. R. S. E. Illustrated by Robert Engraving. 2 vols. royal 8vo. 21s. 16s.—Vol. II. separately, 11s. 6d.

In folio 8vo. the fourth edition, price 3s. 6d. boards.  
**PRAYERS for FAMILIES**, consisting of a Form, short, but comprehensive, for the Morning and Evening of every day in the week. Selected by the late EDWARD PEARSON, D.D. Master of Sidney Sussex College, Cambridge; and Christian Advocate in that University. To which is prefixed, a Biographical Memoir of the Editor. Sold by Longman, Hurst, Rees, Orme, and Brown; J. Hatchard; P. C. and J. Kingston, London; H. Musley, Derby; and J. Raw, Ipswich. Of whom also may be had,

**THE NEW DEVOUT COMMUNICANT**, according to the Church of England; containing an Account of the Institution, Prayers, and Meditations before and after the Adoration, and a Companion at the Lord's Table, in f. cap 8vo. with an engraved title, price 3s. 6d. bound, or on common paper, in 18mo. price 1s. 6d. bound.

**A CENTURY OF CHRISTIAN PRAYERS** on Faith, Hope, and Charity, with a Morning and Evening Devotion, in folio cap 8vo. with three elegant Engravings, price 3s. 6d.

In an octavo volume, illustrated with Engravings, descriptive of 40 newly invented or improved implements and processes, price 12s.

**THE ITALIAN CONFECTIONER**; or, Complete Economy of Desserts; containing the Elements of the Art, according to the most modern and approved Practices. Full and explicit directions respecting Distillation, Decoration, and Modelling, in all their branches: including Figures, Fruit, Flowers, and Animals, in Gum Paste; and the Art of Moulding, Casting, and Gilding Composition Pastes, of new and superior quality. The whole comprising every information requisite to form the complete Confectioner, and to enable him to arrange the Embellishments of the Table with taste and elegance. By G. A. JARRIN, Ornamental Confectioner, at Messrs. Gusters, in Berkeley-square. London: Printed for John Harding, 36, St. James's Street.

**THE LONDON MAGAZINE**, No. 12, for December, published by Baldwin, Cradock, and Joy, contains the following Articles:—"The Lion's Head. Table Talk. No. V. On the Pleasure of Painting. Exmouth Wrestling. Osmyn, a Persian Tale, Part I. The Quakers. The Two Hares of Men, Borrowers and Lenders. Our America, viz. Batavia, a Tale of the East. Epistle, in Verse.—Redwald, a Tale of Monks, by Miss Constable.—and Memoirs of Henry Hunt, Esq. Newly discovered Letter on the Mad of Orleans. Traditional Literature, No. I. Letters of Foote, Garrick, &c. Sonnets. On Population. Mr. Godwin's Answer to Mr. Malthus's Essay on this Subject. Sketch of the Progress of Vocal Science in England. No. II. Sonnet.—The Moback Magazine. The Drama, No. XI. Literary and Scientific Intelligence. Historical and Critical Summary of Public Events. Commercial Report. No. the usual Literary and Commercial Information, Tables, &c.

**THE BRITISH REVIEW**, No. XXXII, published on the 1st of December, contains, Art. I. Foster on the Evils of Popular Ignorance, 2. Matthews's Diary of an Invalid, being a Tour in Portugal, Italy, Switzerland, and France, 3. D. Yates's Catechism of the Evidence of Christianity, 4. Crawford's History of the Indian Archipelago, 5. State of the Jews, Twelfth Report of the London Society for Promoting Christianity among the Jews, 6. Present State of Agriculture, 7. Ozley's Expeditions into the Interior of New South Wales, 8. Lingard's History of England, 9. Lady Russell's Life and Letters, 10. History, Manuscripts, Customs, and Present State of the Monteguin's, &c. &c. London: Printed for Baldwin, Cradock, and Joy; and J. Hatchard and Son; of whom may be procured the thirty-one preceding parts, at 6s. each.

*Wendoborn's German Grammar.*  
 A new improved edition, 6s. 6d. bound.

**A GERMAN GRAMMAR**, with Practical Exercises. By F. A. WENDEBORN, LL. D. Member of the Royal Academy of Sciences of Berlin, and of the Imperial Economic Society of St. Petersburg. The seventh edition, materially improved. Printed for Boscuy and Sons, Broad Street; Longman, Hurst, Rees, and Orme; and G. W. B. Whittaker, Paternoster Row; Black and Son, York Street.

Haydon.

**THE NEW MONTHLY MAGAZINE** for December 1, is embellished with a fine portrait (accompanied by an interesting Memoir) of B. R. Haydon, Esq. and contains among other articles—1. On Study and Stagnation. 2. Remarks on Mr. Maturav's "Melmoth." 3. A Professor Sport on the present state of Music in London. 4. On the Writings of Charles Brown the American Novelist. 5. Character of Dr. Young, by the late Sir Herbert Croft. 6. On the Genius and Writings of Wordsworth, concluded. 7. M. an Erotic, or the Lover's Manual. 8. On Angling by an Amateur. 9. The New Adventurer. 10. 3d. Say's fourth and last Letter to Mr. Malthus. 11. Notices Atticus. 12. On Americanisms, with a Fragment of a Transatlantic Pastoral. 13. The Art of Rubbery. 14. Intelligible Odes, Gay Sonnets, and Decret Epigrams. 15. Dramatic Notices. 16. Varieties, Literary and Scientific. 17. New Publications, with critical remarks. 18. New Inventions and Discoveries. 19. Reports Literary, Agricultural, and Commercial. 20. Historical Digest of Political Events. 21. Interesting Occurrences, Promotions, Births, Marriages, and Deaths; with Biographical Particulars of celebrated Persons. London: Printed for Henry Colburn and Co. Conduit Street.

In the Press, and speedily will be published.  
**A TREATISE ON POLITICAL ECONOMY**, By J. B. SAY. Translated from the Fourth Edition of the Original, by C. R. PRINCEP, M.A. with Notes by the Translator. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had.

**CONVERSATIONS ON POLITICAL ECONOMY**. By the author of "Conversations on Chemistry." 12mo. 3d. edit. 8s. boards.

In a few days will be published, in 3 vols. 12mo.  
**EDINBURGH: a Satirical Novel**. By the author of London, or, a Month at Strevett's.

"I shall show the Vices of Edinburgh, not as people, but as a contrast to those of London; nor shall I omit a Portrait, or a Character, because the Original was my friend, or acquaintance."—Introduction.  
 London: Printed for Sherwood, Neely, and Jones, Paternoster Row.

In 4 vols. 8vo. price 21s. 12s. 6d. eds.

**LECTURES ON THE PHILOSOPHY OF THE HUMAN MIND**. By the late THOMAS BROWN, M.D. Professor of Moral Philosophy in the University of Edinburgh. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and W. & C. Tait, Edinburgh. Shortly will be published.  
**POETICAL WORKS** of the late Dr. T. BROWN.

*Anecdotes of the Royal Family.*  
 The 26th edition, in post 8vo. price 6s. 6d.

**LETTERS** from Mrs. DELANY (Widow of Dr. Patrick Delany) to Mrs. FRANCES HAMILTON, from the year 1779, to the year 1788; comprising many unpublished and interesting Anecdotes of their late Majesties, and the Royal Family. Now first printed from the Original Manuscripts.

"Little circumstances show the real Men, better than things of greater moment."—Addison.  
 Printed for Longman, Hurst, Rees, Orme, and Brown, London.

In 12mo. price 6s. boards, the 2d. edit. of  
**ESSAYS AND SKETCHES OF LIFE AND CHARACTER.**

"We have seldom perused any similar volume with greater pleasure. It is written throughout with great facility and elegance, and bears every where the indubitable mark of an upright and honourable mind, richly cultivated both by study and travel."—Blackburn's Magazine, August, 1820.  
 Printed for Longman, Hurst, Rees, Orme, and Brown, London.

London: Printed for the Proprietors, by W. TOLLY, 67, Chancery Lane: Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 32, (Exeter Change) Strand, where Communications, (post paid) are requested to be addressed to the Editors.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom; but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 203.

SATURDAY, DECEMBER 9, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### ALMANACKS FOR 1821.

Accustomed as we now are, to speak freely what we think on all topics of criticism, we confess that it is with sensations of profound apprehension and dread, that we venture to approach the dangerous subject of this essay and review. We have tried the claims of prose writers, and know the peril of angering them: we have examined the pretensions of poets, and experienced the ruthlessness of their fury: we have told painters our opinions, and felt that they could be deaf as an unattentive canvas: we have given good advice to brother scribes in the periodical line, and incurred the pourings out on our innocent heads, of the full phials of their gigantic and intolerable wrath—yea, we have dared “all this, aye more,” patriotically, disinterestedly, nobly, sublimely, for the public weal; and none can tell so well as we, what it is to suffer for our country, and the age we live in. But virtue is its own reward, (we put it in a parenthesis, our encouragement has been yet more solid and tangible) and, thus stimulated, we are not afraid to render a full and true account of the writings of the most potent necromancers of these days; of the prophets of weather and political events; of those whose power is equal to their foresight, and whose foresight is unbounded by time, though limited by space in their annual lucubrations. Be it ours, sustained as we are, to perform this task fearlessly, like knights of old, who dispelled enchantments by boldly walking up to them, and dispatching dragons and hippogriffs with their sharp swords. We shall then cause the castles to vanish, and disclose to the astounded world such a number of imprisoned spells, secrets, and wonders, that we are sure we shall be placed high above the Arthurs, Guys, and St. Georges of authentic fame; and our readers will allow that for their sakes we have encountered and developed more magic than they could have any notion existed in our enlightened era.

Before commencing this awful undertaking, however, we must clear our consciences, by contritely acknowledging, that we are quite ashamed, and repent of having come on for years endeavouring to inform and instruct our contemporaries, although ourselves ignorant of those prodigious stores of intelligence, an acquaintance with which has prompted us to this labour. That without reading the stars, we presumed to pronounce upon the volumes which we read; that we compiled biographies without casting glances at the basis of all genuine knowledge of individual character; that among

all our parts of speech, we paid no regard to planetary conjunctions; that we criticised pictures without looking to signs; and that in all the wide scope of our science, we never thought of pre-science or a homo-scopo.

How much better we are informed now, the public will discern by a glance at what follows. Nor are we without a fond hope, that while we display the charms of our conjuration erudition, we shall at once convey a mass of unimagined intelligence to our readers, and, happily, infect them with a love of occult literature, which may be of the utmost consequence to them through the whole course of their mundane existence. If Amphispæna-like, we have to turn our heads two ways, to the past as well as to the future year; although it may lengthen our tale, we shall take care to be most pointed on that which is most new-fangled; and, while distilling the ink from our pens, to exercise our black art only on what is harmless and amusing.

Perhaps there are few persons in England aware of the number of tomes annually published to warn the population of these realms of all the stellar influences, meteorological phenomena, and destined events with which the womb of the coming year teems: through these we have urged our puzzled way; and are so full of the status of prophecy from the toil, that we have no hesitation in foretelling the immense quantity of pleasure and instruction that must thence result to the million. But presto, presto!—the almanacks for 1821.

First, of the goodly series published by the Right Worshipful Company of Stationers, “*The Gentleman's Diary*,” or the Mathematical Repository; containing many useful and entertaining Particulars, peculiarly adapted to the ingenious Gentlemen engaged in the delightful study and practice of the Mathematics—the 81st Almanack of this kind,” &c. &c. 48 pages, 2s. 3d. stitched. At the threshold of this polite and scientific work, we stumble on a disastrous piece of news. “The Editor is sorry to record the death of two *Diarians*: Mr. George Simpkin of Tinson, and Mr. Jonathan Haslam of West Houghton. Mr. Simpkin has been a contributor to the *Diaries* and other publications of a similar nature, for more than half a century. He died in the 85th year of his age. Mr. Haslam died at the age of 20, and promised to be a good mathematician *in case he had lived*, and pursued his studies in the mathematics.” After this we have the usual monthly almanack, commencing with “January hath xxxi days,” and terminating with December; in which the red letter days, &c. are noted, together with lunar and solar observations in abundance. This is fol-

lowed by answers to questions critical and philosophical; “*Ænigmatology*,” or poetic answers to the last year's enigmas, charades, and rebuses; and these are succeeded by similar riddles, to be answered in 1822. Mathematical answers and queries conclude the whole. As a sample of these, no doubt, entertaining and important speculations, we may mention, that in the first branch, *new* antiquities are produced every year; and the same page tells us that the Pharos of Dover Castle was built by Julius Cæsar 50 years before the Christian era, and yet that the Multangular building leading to Bootham Bar, in York, is probably the remains of the oldest edifice in England, being erected in the time of Severus, about A. D. 208!! The answers to the enigmas are in a higher tone: the author, for example, gives a prize of so many *Diaries* for the superior puzzle—that of 1820 was a *Shell*; and these are among the solutions:

By *Ignotus*.

Spencer, I find your prize this year  
Is nothing but a *shell*,  
Which if bedeviled with due care,  
‘Tis worse than death—‘tis Hell!

By *Mr. Thomas Baker, Nancaton, near Hinchley*.

Grim Death a wealthy miser met,  
And his commission told;  
Which made the miser sorrow fret,  
And closet all his gold.  
Thou fool! said Death, I will thee tell,  
This evening thou must die;  
Then struck as with a bomb or *shell*,  
The miser thus did cry—  
What shall I do? where shall I run,  
To hide the ill that I have done?  
Good Lord my soul deliver!  
Pooh! said the Devil, shake off all fears;  
Come, go with me, and shed no tears,  
For, thou art mine for ever.

It will surprise our readers to learn, that notwithstanding the poetry and morality of Mr. Baker's batch of lines, and the efforts of some fifty other competitors, the reward of nine *Diaries* was adjudged to the splendid *Ignotus*. *Omne ignotum pro magno*! This miscellany is equally great in natural history. One of the inquiries is why “*Gossamers*” are most abundant on misty mornings—the learned Theban never suspecting that they are not more numerous, but only more visible, in consequence of the mist!

As we have a multifarious business before us, however, we must leave the Gentleman's *Diary*, which we should do with still greater reluctance, were it not in our friend Baker's stile to “Come, go—”

Secondly, to *The Ladies' Diary*, or complete Almanack, &c. containing new improvements in arts and sciences, and many entertaining particulars: designed for the use and diversion of the Fair Sex. This is in form, price, and contents, the counter-

part of the preceding, and has quite as vigorous a course of mathematics for the diversion of the parties aforesaid. *Ex. gr.* (and any of our lady readers may answer them if they please and can). "1. Required the declination of that star at which the angular distance of the pole and zenith (P.S.Z.) is a maximum at the moment the star transits a given almucran in a given latitude?"

"2. Given  $f = \frac{a + bx}{c + dx}$ , to find such values for  $a, b, c, d$ , that  $f \sin x$  may be  $= x$ ."

If these are not poetry, the inquisitive Fair may ride the Ladies' Diary, pages 47 and 48, for a dozen more, equally perplexing. We are sorry to observe that almost all the famous names recorded in this work are masculine. The sacred volume itself is however personified as *Diaria* (the Gentleman's being *Diarina*), and so between them, from year to year, wags the world away, the greatest insignia and riddle of all.

The third is the glorious and immortal *For Stellarum*, &c. &c. with "an hieroglyphic adapted to the Times. By Francis Moore, Physician." But we have at length reached inspired ground, and must end all vaniloquy. And indeed the subject is at present unusually solemn, for the prophecies for 1821 are the first vaticinations of the New Prophet who has been appointed by the Stationers' Worshipful Company to succeed in the gift of prognosis the late worthy seer Mr. Andrews, who had conducted this department for many years, and died a few months ago, full of learned honours. To such a personage it was not easy to find a fit heir; and we do fear, on a careful examination, that the prophet's mantle has not descended on one like unto himself. In short, we think that Moore's Almanack, under its new editor, is far inferior to what Moore's Almanack has lately been. It wants that peculiar brilliancy of style, that sparkling manner in astronomy, that startling manner in astrology, and that blunt, friendly, sagacious manner of putting us on our guard against accidents, the day before or the day after, for which the learned Doctor's predecessor was so deservedly celebrated. And it is really distressing to reflect on the afflicting consequences which must ensue from any want of confidence in the forebodings of this publication. How are Kings to govern, if left in the dark as to the "schemes of the heavens"? How are ministers to conduct affairs, if abandoned by the guidance of Moore on the score of benign and malign aspects? How are farmers to plough or sow, or plant or mow, if they cannot rely on the periods when the weather is to be dry or wet, or fine or frosty? In a word, how can the universe continue to roll on, and men to exist, if any cloud obscures this long-established, much-trusted, and hitherto infallible director of their ways and actions? It is a matter of deep interest, of vital and prevailing concernment; and it is with aggravated grief we are in truth com-

\* A little experience will, no doubt, enable him to approach more near to the original perfection of his work.

peiled to say, that Moore is not what he was. There is a lightness in his writing, appallingly inconsistent with the gravity of his subject; may, there are attempts at puns and witticisms, which no alumnus could warrant, and which can only proceed from the most unfortunate planetary trine over the writer's pen. But the matter is too painful to dwell upon. The following miscellaneous extracts are the most striking. "If parliament men would all make short speeches, they would get through more business and do it better too. I hope those peers and commoners who read my almanack, will take this hint kindly, and set a good example in this respect." p. 11. (Mr. Peter Moore ought to be a pattern, were it only for his name's sake.) "Important news from the East Indies may be expected about this time (July). I wish it may be, that the Hindoos have abandoned their superstitions." (What a fine specimen of amphibology!) The oppositions of Saturn and Jupiter to the Sun this month (October) have their meaning. It is not wise always to speak our thoughts in plain English: *Et erunt disceatantes atq. contraria inter homines, et alteraciones, et dimensiones in fide.* This is a shabby trick in the new Editor, to impose on the ignorant by a bit of Latin which means nothing. His illustrious predecessors would not thus have staked the reputation of their mighty work; and such doings will make the public cry out reproachfully, with Hamlet—

Could you on this faire mountaine leave to feed,  
And batten on this Moore!

The poetry is not so quaintly vigorous as heretofore; but the main, and, indeed, it may be called, *par excellence*, the sole feature of the work, is but queerly delineated—use of course allude to the astronomical predictions, the *schemata celi*, and the portentous hieroglyphic. The two *variable* eclipses of the year, we are given to understand, predicate private designs and petty contrivances, "just as *visible* eclipses betoken great and public actions." As for the Judicium Astrologium for 1821, independent of the picture, which is as usual unintelligible to the uninitiated; it is some consolation to find that in the Brunial Ingress, Venus and Mercury are so nearly connected this year, as to be within half a sign of the House of Relations; that the Sun (*qu. Son?*) and Mars are in the House of Children; Jupiter in the occidental angle of the House of Marriage; and Saturn near the upper door of the House of Death. This, though no promising appearance of the Face of the Heavens, may not do so much mischief as is to be feared, because "happily the malevolent planets are far from the ascendant." Old men, however, must look to themselves, as the position of Saturn bodes them no good; and it would not be at all surprising if, in consequence of his approach to the *Death's door*, a good many aged persons died this year. In the vernal quarter, the deuce and all is threatened from conjunctions of Saturn and Mars, and Jupiter and Saturn, although neutralized in some degree by other conjunctions, of Mars and

Mercury, and Saturn and Mercury. The inhabitants of Britain will be glad to hear, that not they, but Spain, Portugal, the Grand Turk, Persia, and China, are most in danger from these aspects. Of the ostival quarter, the principal evil menaced by the planets, is (bless our stars!) that "some marriage" (the author) suppose, between a rich beauty, and a dandy vagabond, who cares more for her money than for her. In the last quarter, the most remarkable occurrence to be anticipated, that owing to "Mars laying down his spear in the House of Piety," a great number of our guardsmen, and officers, and soldiers belonging to other corps, will take Orders—not general, nor brigade, nor regimental, but (Clerical orders); submit their whisks as heads to the tonsure, and turn parsons! This is a change indeed, which will make our true Church Militant.

The fourth Almanack in the volume, is called *Merlinus Liberatus*, by the renowned and long since deceased John Partridge (who will not now deny the fact, as he did formerly). It is on the Moore plan; and we think we have made a discovery, the inference from which is, that the Stationers' Company themselves are the conjurers who, under those various *nommes de guerre*, and modestly concealing their celestial talents, predict the coming weather for twelve months. If erroneous in this conclusion: if they are not the figures in the Dutch barometers who step out and in, to intimate when it is to be fair and foul, we will swear, from the similarity, that they must be the clock-makers. *Eccce signum*, the weather for January next, is to be as follows.

Francis Moore.

2. Rain or snow now about.
6. Cold weather; perhaps sharp frosts.
14. Cloudy, with rain or sleet.
20. Cold winds may be expected to blow.
25. More fine, towards the end.
30. Frosty.

John Partridge.

2. Rain or snow about this time.
  7. Cold weather. Sharp frosts perhaps.
  15. Cloudy, with rain or sleet.
  20. Cold winds may be expected to blow.
  25. Towards the end more fine.
  31. Frosty.
- Thus, when astrologers do agree, the unanimity is wonderful; Henry Season, the author of *Spectrum Auri* (of whom more anon) coincides to a day and letter with Partridge; so does Rider in his *British Merits* with the sense, but not literally, and the same may be said of Moore Improved. So that those interested, may set their hearts quite at ease about the weather—such a cloud of witnesses cannot be mistaken about mist, rain, or sunshine. It is equally delightful to find that no greater doubts hang over political than over meteorological events. For example, Moore assures us that in July "South America far from quiet, and some parts of the German states much agitated;" and Partridge also predicts for the same month, "South America far from quiet; Germany troubled in some parts; Let the Germans look to it. But our friend Partridge shines most in "Genethliacal Astrology;" for he gives us the radix or nat-

city of the Island of Jamaica most minutely east, and upon his veracity, done by a worthy hand before 1655, when the island was taken by the English!" Thus far (quoth he) the manuscript of my ancestor: let those who question the value of astrology be a predictive science, meditate upon these remarks, written more than 160 years ago, and be silent!" Need we add, that every thing so predicted, has since come to pass: let that will not believe let him, as Lord Peter says, die and be damned.

"The fifth Almanack is "Old Poor Robin, part in prose, part in verse; part narrative, part contemplative; part serious, part comic; the 159th edition."

Come, jolly boys, come! bring a brand for the fire,

And draw your stools closer about;

Now join to the faggot that blazes up higher,

And joy to our liquor so stout;

For here comes Poor Robin! huzza, then, my boys!

More fun and philosophy too!

Contemplative—serious—comic, for noise—

Prose—narrative—verse—that will do.

We dare to say this is a very humorous performance, though it does appear to us to be occasionally filthy, and generally silly.

A topline runs along the 48 pages of which it consists, the moiety of which is as follows. "Sir Robin, your most obedient. How obedient? Not at all. Sir Robert! That is not my name. What then? Sir Robin, or Poor Robin, alas! Poor Sir Bob. The renowned knight of the Burnt Island!" There is also a long story about the Emperor of China, which, as we do not comprehend, we do not chuse to describe.

Almanack the sixth is the *Speculum Anni; or Season on the Seasons*. By Henry Season, licensed Physician, and student in the Celestial Sciences, near Devizes.—The author's eighty-eighth impression," same size and price as all the preceding. Besides predictions as to the weather, this philosopher treats, along his ephemeris, of "the way in which the passions of the human mind influence the disposition of the body;" and the result of his investigation is thus laid down. "In brief, let not young men and women, when disappointed in love, fancy they can possibly mend the matter by hanging and drowning themselves: let not men who are given to rage eat much pork, or indulge in drinking spirits: let not persons during seasons of sorrow have recourse to audanum: and let not those who have been in the habit of indulging unreasonable Periwig-worms themselves to read or listen to the rash of ghost and hobgoblin stories." Mr. Season is indeed not only remarkable for such good advice as we have just copied, *pro bono publico*, but for other extraordinary merits. He prophesies as well as Moore himself, for he does it in the same words. His poetry is perhaps superior to that of any other ephemerist—for instance, he verse for August:

Agricola, with the sober ant, grows wise,  
And at this time his harvest soundly plies;  
His crooked razor shaves the bearded field,  
His barus receive what thus the farms may yield.

The beauty of the whole of this is obvious, and the bold figure in the third line must strike every reader of taste, as a most unrivalled.

But Mr. Season, like Hudibras,

Great on the bench, great on the saddle;  
is as eminent in his medical as in his poetical and prophetic capacity. He tells us, "It is best to cut hair when the moon is in Libra, Sagittarius, Aquarius, or Pisces, increasing in light." Though this be in the opinion of many but a trivial thing to observe, yet most of the *Masters* in astrological physic have thought it, and *proposed it to be of no small moment.*" Mr. Season is moreover learned on the seasons: for example—

Signs of rain—

If in the morning, sky or sun be red,

Or at the night, in clouds he makes his bed;

When sun or moon look pale, or seem too great;

Or lamps and lights do spark, and stones do sweat;

If winds do often change, and frogs are crying;

The bees in haste unto their hives are flying;

When *flout* and flies fall sore begin to bite;

And birds and beasts have greedy appetite;

When *crickets* crack, and peacocks cry amain;

Soon after look for tempest or for rain.

The last prodigious quality we have room to notice in this wonderful genius, is his depth in the *Judicium Astrologium*. It is true that he is like the others on the subject of the planets—*medium celi, inum celi, ingressus, &c. &c.*; but there are some earthly matters peculiarly his own. Thus, in the winter quarter, he says, "Let my readers guard against sudden hemorrhages *a posteriora*, gout, tooth-ache, &c. Let your meats be hot and nourishing; and whenever the weather is dry under foot, and fair over head, procure warmth rather from moderate exercise, than from scorching your skin, and burning your nose over the fire. So at least I advise men in the prime of life: as to old gentlemen, they may often reach the coal-scuttle, and stir the fire, if they are too infirm for other exercise!" He confirms the prediction of the dandy marriage in summer, so that must be true.

It is with great reluctance we quit so admirable a writer; but we must go to the *secenth* and last Almanack of the larger series viz. "ΑΛΛΗ ΟΥΡΑΝΟΣ, the Celestial Atlas. By Robert White, Teacher of the Mathematics; the 72d impression."—And fivepence in price higher than its predecessors. This contains more of astronomy than the others. Among its miscellaneous intelligence is a table of our Sovereigns since the Conquest, thus moralized.

Above you view the rise and fall of kings,  
Whose fate sometimes a useful lesson brings.  
Well if all men could profit from the past!  
Each know his duty, each excel the last.  
And justly execute his stated task.

We have now brought the history of the year's almanacks to the end of that catalogue, evidently produced by the same labours, coinciding in all the tenses, past, present, and future, and printed so as to be bound up together. But these are only portions of the numerous productions of this kind; and

\* Qui Amen?

were it not the dread of being tedious, we must have trebled the length of this article, in affording any thing like a fair view of the whole. As it is, we shall now complete the *coup-d'oeil* in the most concise manner.

The eighth Almanack is "The Clergyman's," with the lessons for every day in the year, instead of the predictions of the others; for though priest and prophet went together in the olden times, the reverse is now the case; and the Clergyman's Almanack does not even venture to foretell the weather for next year. It is full on clerical topics, gives accounts of the clergy in every diocese, of the universities, public schools, &c. It has also a digest of ecclesiastical law, costs 4s. 6d. and is compiled and arranged by Richard Gilbert, accountant to the Society for promoting Christian Knowledge.

Rider's British Merlin is the ninth on our list. It is stated to be "compiled for his country's benefit, by Cardanus Rider;" and the cost is only half-a-crown, although the book is further "adorned with many delightful and useful verities, fitting all capacities." One of these verities is a gardener's calendar for every month; others consist of the fixed fairs, and several useful tables. Mr. Rider does not prophesy.

The tenth is called "Moore Improved," as if that were possible! This is from the Chiswick press, and the price 2s. 6d. The second title is "Will's Farmer, and Countryman's Calendar," and this explains its object. It has farmers and gardeners' calendars. Its astrological predictions are in a more modern style than the others which dabble in that sublime art; but the most melancholy and distressing point respecting it is, that, awful to relate, it totally differs from the sage Moore, the wizard Partridge, the sagacious Robin, and the immortal Season, in its meteorological predictions. We are thus thrown into a dreadful dilemma; or more properly, it may be said that our weather is quite unsettled. All we can do is to record the appalling fact, and confess *non nostrum tantus comporre litas*. And what adds to our difficulty is, that these authorities also differ upon politics. Season's *Spec. Anni* affirms, in the most comfortable style, that in September, "All things now broken in the continuance of peace in Britain; our intestine babbling of vain and foolish men cease; all will be tranquillity and plenty;"—whereas, and our hearts bleed to think of it, both old Moore and Will's Moore Improved, flatly contradict this auspicious prognostication. The former states roundly, "Divisions and controversies not yet at an end. Some tumults, some scuffles, great sorrow unto many. I hope there will be no great fire." And the latter declares, that "Discussions and divisions are not yet terminated. It appears as if there would also be some tumults of a popular kind, to the detriment and sorrow of peaceable men." We are really quite alarmed at this coalition of prophetic disaster—for we, alas! are peaceable men. But we must leave the question to the grand expounder of prophecies, Time.

The eleventh almanack is Goldsmith's

calculated by John Goldsmith; and though very small, 2s. 6d. in price. It is a miniature of Moore as to ephemeris and meteorology; ventures on forecasting 365 days' weather; and contains lists of Parliament, public offices, and other useful matter of that description.

The *twelfth* is *Will's* complete Clerical Almanack, a small sized, half-crown publication, with the lessons, and other contents similar to the Clergyman's.

The *London Almanack*, (thirteenth.) is copper plate, on the face of a quarto page of paper, and when folded makes a very tiny tome. It has this year a neat engraving of Southwark bridge, and costs 2s. 6d. Besides the almanack part, lists of the city magistracy, and of holidays, are its chief distinctions.

The "*London and Country Sheet Almanack*," on a large sheet, for counting-houses, &c. 2s. 6d.; and *Wing's Sheet Almanack*, on a similar plan, for 2s. Two *Stationers' Almanacks*, the *Evangelical Almanack*, the *Oxford*, the *Cambridge*, the *Commercial*, *Moon's Western Sheet*, and *Moon's Book*, swell the general list to twenty-three. Eight more, called *County Almanacks*, 2s. each, and adapted to particular districts, make the whole number thirty-one. There are also Scotch and Irish publications of the same kind, such as the *Belfast* and *Aberdeen*; and of all these, immense quantities are annually sold. By the 9th of Queen Anne, stamp duties of a penny were laid on every almanack printed on one side, and 2d. on every other. These duties were doubled by the 30th of Geo. II.; and further imposed by 2d. 4d. 4d. and 3d. successively added by acts of the 21st, 37th, 44th, and 55th of Geo. III.; raising the total to a tax of 15d. on every almanack, and producing a very considerable revenue. It is thus evident, that even for an uncertain peep into futurity we must pay ready money. We have not mentioned pocket-books, which are subject to a similar stamp, and almost as numerically extended as almanacks. But assuredly what might be grudged for the one never could cause a regret for the other: and when we consider that for the small sum of half-a-crown, we are enabled to provide against storm and tumult, moral evil and political convulsion, the malignity of sextile, trine, or trimorion, and in short, to defy the malice of the stars, it must be confessed, that of all the authors of the times, the authors of almanacks are the best entitled to our gratitude and admiration. Nor ought the nation to remain in ignorance of the debt it owes to the worshipful Company of Stationers, which is the prime mover of nearly all these invaluable performances, calculated at once to illustrate our literature, advance our science, and instruct our minds in the most recondite matters.

Perhaps we may have a lurking vanity to be thought worthy of some slight acknowledgment, on account of being the first writers, (except the writers of the acts imposing the stamp duties) who have taken a full and fair view of this interesting subject, and thus put distinctly before the public the

variety and extent of its treasures, which, without epiphonema, we wish our best friends heartily and absolutely to enjoy. Therefore have we written an essay, the celestial type of which is of the finest configuration, and the luminous splendour of which never has, and never can be eclipsed.

*Specimens of a Version of Horace's four Books of Odes.* By F. Wrangham, M.A. F.R.S. Only fifty copies printed.

Presuming this writer to be the Rev. Francis Wrangham, he only gives an additional proof that the writing of good latin verse does not include that of English poetry. The present Specimens are in the eight syllable measure, which Scott had raised into such sudden and short-lived popularity. The present author uses it with sufficient variety and command of language; his ear is not defective, and he is in general an accurate translator. This is much; but it is not enough for the English versifier of Horace. The peculiarities of the Roman Poet, lie in his happy choice of single phrases, in his simplicity, and in his graceful and natural transitions from gaiety to the serious and almost painful feelings with which futurity touched a noble mind among the heathen. Mr. Wrangham does not appear to us to be successful in giving those peculiarities, though he has powers, and time and practice may make him equal to the translation. We take the first poem, as an evidence both of the merits and deficiencies of the work.

#### ODE I.

"Odi profanum vulgus et arceo."

"The vulgar mob my soul disdains."

Here "Profanum vulgus" is not "The vulgar mob;" the "arceo;" an important word is omitted: and after all, we are left in doubt whether it is not "The vulgar mob," that "disdains his soul."

"Carmina non prius audita," is harshly translated, "Strains by tongue now first," &c.

"Regum timendorum in propriis greges."

"Their subjects mighty monarchs sway."

Here the peculiar meaning is lost. The "timendorum" is the chief matter of the line; and it is not "mighty."

"Æqua lege necitas  
Sortitur insignes et imos."

"In Fate's black calendar, alas!  
Promiscuous mingle low and high."

The lofty idea in the original, is here degraded into a Newgate Delivery.

"Omne capax movet urna nomen."

"None, none escape that registry."

The melancholy and religious pomp of the great universal urn, is here turned into a registry:—an expression obviously connected with the lower uses of civil life.

The next passage is favourable to our hopes of the author.

—Him, o'er whose guilty neck the sword  
Suspended hangs, Sicilia's board  
Invites in vain. No reliab he  
Finds in her foods: her minstrelsy  
Vainly wooes sleep. Soft sleep repairs

To the low huts of villagers,  
To rustic bank o'erhung with trees,  
And Tempe fann'd by Zephyr's breeze.

This is all pretty as poetry, but it is still not equal to give the peculiar impression of the original. The epithet of the sword—*districtus*, is important, and is omitted.

"No reliab he finds in her foods," does not adequately give "*elaboratam saporem*," phrase of great force and poetry. "Vainly wooes sleep," "non somnum redudent" this essential word is enfeebled. "Soft sleep repairs," "*Somnus lenis non fastidit*." This is not repairs. The words in *Italian* in the poetry, are obviously superfluous. We need not extend this criticism, for it is plain that the translation must be altogether revised. The attempt is too interesting to be repelled with harshness on our part, even if harshness were a habit of our criticism, which it has never been. But *Horace* is so universal a study, that the slightest failure could not escape observation by the public; and so great a favorite, that a failure would be felt as a peculiar offence to public taste.

#### THE PERRY ANECDOTES.

From this month's publication of this neat little selection, No. XIII, entitled *Fidelity*, and ornamented with an engraved portrait of Lord Hastings, we extract two stories as a specimen.

"*Arare legatee.*—Cardinal Pole and a Venetian gentleman named Aloisio Priuli attracted much notice at Rome for their conformity in manners, reciprocal affection, and delightful sympathy, which continued for a period of twenty-six years without interruption. The cardinal falling ill, and being told by his physicians that he would not recover, made his will, by which he made Priuli his sole heir; but such was the generosity of the Venetian, that he distributed the whole of it among the English kindred of his friend, saying, 'While my friend, the cardinal lived, we strove who should render the greatest benefits to each other; but by dying, he has got the start of me in kindness, in enabling me to do so much good to his relations in England.'"

"*Venetian Honour.*—When the republic of Venice was in the height of its splendour one of the many spies whom the jealous system of that government kept in constant occupation, ran to the state inquisitor, with information that a nobleman of the name of Foscarini had connexions with the French ambassador, and went privately to his house every night at a certain hour. The state inquisitor could not believe that a man so whom he had an intimate personal friendship and on whose honour he had the strongest reliance, could be guilty of such treason to the republic. He set another spy to watch Foscarini's motions, who brought back the same intelligence as the first, adding the description of Foscarini's disguise. Still unwilling to proceed without the most undeniable proof against his friend, the inquisitor put on a mask, and went himself to reconnoitre. His eyes confirmed the report of his informants; and a regard to his duty

rising paramount to all private feelings, he sent publicly for Foscarini the next morning.

"Nothing but a resolute denial of the crime could be extorted from the firm-minded citizen, who, sensible at the same time of the weight of proof against him, prepared for that punishment which he knew to be inevitable, and submitted to the fate which his friend was obliged to inflict, no less than imprisonment in a dungeon for life.

"The people, with whom Foscarini was a great favourite, lamented his fate, but their lamentations were vain. The magistrate who condemned him never recovered the shock; but Foscarini was heard of no more, till an old lady died forty years after in Paris; who, in her last confession, revealed that when she resided at Venice, as companion to the French ambassador's lady, she was visited by a nobleman of Venice, whose name she never knew. Thus was Foscarini lost, dying a martyr to love and tenderness for female reputation."

#### BELZONI ON ROYPT AND NUBIA. (Continued.)

Our preceding notice of this work reached Assouan with the traveller, on the 24th of August. At Assouan, are situated the prodigious quarries of granite, whence the ancient Egyptians, the Greeks, and the Romans, drew the principal materials for their architectural designs. Here there is a fine view of the first cataract. Proceeding up the river, Mr. B. arrived on the 29th at El Kalahe, a village remarkable, however, for a temple like those of Tentyra, Philæ, and Edfu, all, according to the author's opinion, belonging to the later times of the Ptolemies. On the banks hereabouts, are many Greek tombstones and inscriptions; and hence, all the way to Seboua, (two days' voyage) the ruins of antiquity are visible along the whole course of the Nile. By the 6th of September, the boat made Deir, the capital of Lower Nubia, and the farthest point to which old Norden pursued his journey. Messrs. Leigh and Smelt, in our time, got as far as Ibrim, a little higher up; but Mr. B. outstripped them all, and pushed on from Ibrim to the second cataract.

The writer's intercourse with Hassan Cacheff, at Deir, is characteristic of official manners in Nubia, and we quote a portion of the narrative.

"The first question he put to me was, if I had any coffee. I replied we had a little on board for our own use, but that he was welcome to half of it. He next asked for soap, and I made the same reply. Then he inquired if we had any tobacco. I told him we had but a few pipes, and we would smoke it together; with which he was exceedingly pleased. The next question was, if I had any powder. To which I answered, that I had very little, and could not spare any. At this he laughed, and put his hand on my shoulder, saying, "You are English, and can make powder wherever you go." I was glad that he thought so, and deemed it prudent to leave him with this impression; but I told him I did not come there either to make powder or to waste any. By this time

my Janizary had brought me some tobacco from on board; so we began to smoke; and coffee of gryanad was served; but, notwithstanding this, he said my sailors would not advance any farther, for they were afraid to go into the upper country. I told him, that if he gave me a letter to his brother Osseyn, we should be out of any danger. I then showed him the letter of 'Callil Bey at Esne to his brother: on which he observed, that this letter did not mention where I was going. Perceiving that the affair was likely to proceed very dilatorily, I frankly told him, if he meant to let me pursue my journey, I would make him a very handsome present of a fine looking-glass, some soap, and some coffee; on the contrary, if I were to return, he would lose all, and incur the displeasure of the Bey of Esne besides. His reply was, "We will talk of this to-morrow." So I returned to our boat without any positive answer.

"Early in the morning I went to him again. When he asked me for the looking-glass, I replied, that it was ready, if he gave me the letter to his brother at Farra, which at last he did. Previous to our departure from Cairo, I took occasion to obtain all the information possible concerning the country of Nubia, from the natives who came to that city with dates and charcoal; and from them I learned, that a looking-glass and a few Venetian beads would be equal there to silver plate and pearls. Accordingly we took a good stock with us, though I was not certain of entering Nubia. The looking-glass I gave the Cacheff was twelve inches long and ten broad, and was the largest the people there had ever seen. It made a great impression on them. Many, who never came down as far as Assouan, had not seen a looking-glass before, and it astonished them greatly. The Cacheff was never tired of admiring his bear-like face; and all his attendants behind him strove to get a peep at their own chocolate beauty, laughing, and much pleased with it. The Cacheff gave it, not without fear, to one of them, with a strict charge to be careful not to break it.—On my way to our boat I met a very old man, who knew Baram Cacheff, the tyrant of Deir in the time of Norden. He said, that Baram died in his bed, but all his descendants were slain by the Mamelukes; and that he was a boy when Baram died."

From Ibrim to the second cataract, the passage is represented as very difficult.

"I cannot (says Belzoni) omit mentioning the hard labour the barbarian boatmen had on this occasion. They were continually in the water; and though good swimmers, they had great trouble in wading against the current to pull the rope from under the trees, which cover the banks of the Nile in such a manner, that it is impossible to track it along the shore. They are a people living very hardy, and eat any thing in the world. They chew the rock salt, or natron, mixed with tobacco, putting the mixture between the front teeth and the lower lip. The natron is found in several parts of Egypt, and is one of their articles of trade. The Laplanders are said to be very filthy in their food, and I am sure

these people are not unlike them in that respect. When we killed a sheep, I had sometimes the pleasure of seeing the entrails opened, pieces of which, dipped once into the water, were eaten by them raw. The head and feet, with the skin, wool, hoofs, and all, were put into a pot, which is never washed, to be half-boiled, when they drank the broth, and devoured the rest."

On his way, he saw the temples at Ysambul, the great one of which he afterwards opened; and thus describes the natives in its vicinity:

"I perceived a group of people assembled under a grove of trees, who, when I came near them, seemed to be somewhat surprised at the sudden arrival of a stranger. Having desired to see Osseyn Cacheff, for some time I received no answer; but at last was told, that he who sat there was Daoud Cacheff, his son. I saw a man about fifty years of age, clad in a light blue gown, with a white rag on his head as a turban, seated on a ragged mat, on the ground, a long sword and a gun by his side, with about twenty men surrounding him, who were well armed with swords, spears, and shields. A younger brother of much inferior rank and dignity, was among them, who behaved very roughly towards me. Some had garments, others had none, and they all together formed a ragged assembly, by no means of much encouraging aspect. These people have no other employment, than to gather the imposts of their master from the poorer sort of natives. The Cacheff himself has nothing to do but to go from one place to another to receive his revenue; and in every place to which he goes he has a house and a wife. He is absolute master to do what he pleases: there is no law to restrain him; and the life of a man here is not considered of so much worth as that of a cat among us. If he have not what he wants, he takes it wherever he can find it: if refused, he uses force; if resisted, the opponent is murdered: and thus the Cacheff lives."

At this place the value of money was utterly unknown, and barter was the only means of commerce. A very curious consequence of this is related as Belzoni was clearing away the accumulation of sand to obtain admittance to the temple.

"The Cacheff, with his attendants, came to see how we were proceeding, and gave me to understand, that he intended dining with me. I told him I was very glad of his company, but had nothing except boiled rice, unless he would order his people to kill a sheep

• It seems, however, to be a contradiction to say that the natives are unacquainted with the value of money, and yet represent them as so eager to obtain the treasures which they suppose are concealed in the temples. The real fact, we believe, is, that they know the value of money well enough, but would rather be paid in produce or manufactures, in exchange for which they can always procure what they want, while it is not every one who has goods to dispose of that will do so for coin, the country being without a circulating medium, and the coin therefore only available in dealings with strange traders. Soap and tobacco are the great articles in request.—Ed.

for us, which I would gladly pay for. They consulted about who could afford to part with a sheep, and receive piastres in payment, and at last the order was given to an old man, who had five, which was a greater number than any body else possessed. When the sheep was brought to us, the difficulty was to fix the price of it. Being the first ever sold for money in that place, to put a high price on it would have increased the value of sheep in general, and consequently would have been against the interest of the Cacheff; for when he receives his revenue in these animals, he sets them at a very low price, that he may have the more given him. To estimate it at a low price would be worse, for it would be against them all in the exchange of sheep for *dhourra* with the other villages. Finding it a dangerous point to decide, it was at length resolved, that no price at all should be put upon the sheep, but that the man should make me a present of it, and I should give any thing I pleased in return. To prevent any standard being established from what I gave the man, I paid him in soap, tobacco, and salt."

From Ybsambal, after making some arrangements, they ascended to Eshke, Alo-anoris, and Debrons, in a district called Angosh or Sukay, and thence, to Wady Halfa, the last territory below the second cataract. The description of this spot is well worth extracting.

"About nine in the morning we made to the shore, as near as possible to the last cultivated land on the left, which is Wady Halfa. A few of the natives came to see us, whom I requested to bring some asses, that we might ride to the cataract, a request they complied with without any difficulty. Mrs. Belzoni and myself (the Janizary and interpreter advancing before us) proceeded as far as the day would permit us, so as to return in proper time to the bark at night. We had many views of the cataract, and in different directions. I mounted one of the rocks, to have a distant view of the deserts; and as far as I could see it is a flat country, except a few rocks that project here and there, particularly at the river's side, but they are of small dimensions. Towards the desert we saw several wild antelopes, which kept at a great distance from us. As the Nile was high, the current had not so great a fall, as when it is low; but I believe the cataract is not navigable at any time of the year. The rock forming this cataract differs from that of the first, for here is no granite, but a kind of black marble quite as hard. Some say it is black granite, but I cannot consider it as such: the grain of it is too coarse, and not so compact as that of granite.

"We returned to the bark after sunset, and immediately crossed to the island Ma-nary, where we arrived at dusk. We saw fires and people at a distance; but when we arrived we could not find any one. Their huts were left with all they had, which consisted only of dry dates, and a kind of paste made of the same, which they kept in large vases of clay baked in the sun, and covered with baskets made of palm-leaves. A baking-

stone and a mat to sleep on were the whole of their furniture. They had pots and leathern bags to bring water from the Nile to their lands. Their settlement consisted of four men and seven women, with two or three children. They have no communication with the main land, except when the water is low, for at any other time the current, being immediately under the cataract, is so rapid, as to render it impossible to ford it; and boats never go to these islands, seldom passing farther than Wady Halfa. They are poor but happy: knowing nothing of the enticing luxuries of the world, and resting content with what Providence supplies as the reward of their industry. There are a few sheep and goats, which furnish them with milk all the year round; and the few spots of land they have are well cultivated, producing a little *dhourra*, which forms their yearly stock of provision. The wool they spin into yarn; wind the threads round little stones, and thus suspend them to a long stick fixed in an horizontal position between two trees, to form a warp; and by passing another thread alternately between these, fabricate a kind of coarse cloth, with which they cover the lower part of their bodies.

"I visited along with the Reis the whole of the rock, which is about an eighth of a mile in length, and half as much in breadth. It was quite late when we found this poor but truly happy people. They had lighted a fire to make their bread, and it was this fire which directed us to that quarter. They were all hidden in a hole under some ruins of an old castle, which stands on the south side of the island; and when we approached them, the women set up a loud scream through fear. Our Reis, who was a native of the lower part of Nubia, could talk their language, and pacified them: yet, notwithstanding this, we could not entice more than one man out of the place. Their fear was owing to some depredations committed by the robbers of Wady Halfa a few years before, who, at low water, forded over to the island, and did all the injury that could be done to such people."

Our enterprising adventurer, tried to ascend the cataract in his boat, but was nearly lost in the attempt. But they happily succeeded in reaching the shore; and Mr. B. says:

"We landed, and took our route on foot; Mrs. Belzoni, myself, the interpreter, the Janizary, the two men from the island, and four boys belonging to the bark; carrying with us some provision and water. We proceeded, on the rocks, and over a plain of sand and stones, till we arrived at the rock called Aspi, which is the highest in the neighbourhood of the cataract, and commands a complete view of the falls. The prospect from this spot is magnificent. The several thousand islands you see, of various sizes and forms, with as many different falls of water, running rapidly onward, while counter-currents return with equal velocity, exhibit a diversified appearance truly grand. The blackness of the stones, the green of the trees on the islands, intermixed with the white froth of the water, form a fine picture,

which can scarcely be described or delineated.

"Hence you see the four cultivated islands, which lie on the south, or the most remote part of the cataract. They are named as follows: Nuba, Gaunary, Ducally, and Suckey: on the north side are two others, called Dorge and Tabai. These islands are inhabited by a race of people who may be looked on as living in the most primitive state, for no one ever goes to them, nor do they ever quit their island. They are very few in number—in some of the islands not more than five or six; and they live on the produce of the few spots of ground they find on them, which they continually irrigate with the common machine named *hade*, consisting only of a piece of sheepskin and two sticks, by which they draw up the water. They have also a few sheep; and fabricate a cloth from cotton produced in the islands, in the same manner as they make that of wool.

"On the left of the cataract the soil differs from that on the right. It consists of soft whitish stones and sand. From this spot it may be seen, that the course of the river is for a considerable extent among the rocks; and the summits of two high mountains are to be seen at a great distance. This part is not frequented by travellers; for there is no mode of conveyance, and no inhabitants on that side of the cataract. Boats never venture thither: when the water is low, it is impossible; and, when high, it would require a very strong north wind, to stem the rapid current against you."

From this point, the traveller returned down the Nile; stopped at Ybsambal, and commenced removing the accumulated sand from the temple; but owing to want of time, was obliged to leave the operation incomplete; and in good season got back to Luxor.

*Chev. Johnstone's Memoirs of the Rebellion, in 1746-8, &c. 4to.*

(Concluded.)

In introducing our first notice of this work, we anticipated that ere its conclusion we should have occasion to state what "mislike us" in its execution. Perhaps the offence is rather to our feelings than to our judgment; but we cannot bear to have even prejudices removed with too coarse a hand. The misfortunes and fate of the Stuarts have excited a general sympathy in the minds of men; and as time has worn out the impression of their political offences, pity for their sad destiny has gained strength. Obscure shrouds many of the ambitious efforts to exalt the royal prerogative, while we see as clearly as ever, at the end of the long vista of years that now intervenes, the melancholy pictures of exile, of poverty, of frustrated hopes, and of bloody martyrdom. Misfortune has thrown a tender halo over the memory of this hapless race of monarchs—men not only the mightiest in rank for centuries, but many of them distinguished above their era for refinement of taste, love of literature, and knowledge of science.

—and we lament too sincerely the catastrophes, to censure with bitterness the acts of a line of sovereigns, whose dynasty was founded in grief, ran through a course of anarchy, and terminated in wretchedness." Such, we think, being almost the universal sentiment with regard to the unhappy Stuarts, we consider it bad taste in the editor of these memoirs to bore us so much with his "truth of history," or in other words with disquisitions hostile to the principal personage in his canvas. We agree with those who are of opinion, that Editors ought rather to love than have an aversion to the subjects which they choose to bring before the public: allowances may be made for the partialities of friendship and admiration, but it is as indefensible as irksome, to find the enemies of Pope or Pretender taking upon them to give new editions of their poetical adventures, and carping and condemning all the way they go; as if convincing us perforce of the bard's weakness, would give a relish to his productions; or persuading us that the poor prince was a coward, would add an interest to his perilous escapes. In short, we abhor the system of traducing the dead, under pretence of fairness, and with the choop of *flat justice*.

One example of the perversion caused by his sort of spirit is as good as a thousand. The impartial Chevalier Johnstone and his sturdy Whig Editor, (what have Whigs to do with superintending Jacobite memoirs, orories with histories of the Revolution?) relate that the Battle of Culloden was lost a consequence of Lord George Murray's owing no attention to the Prince's repeated orders to place some troops in an inclosure, which would have prevented that English manoeuvre which proved fatal to the clans. We would think that the natural reflection upon this circumstance would be to denounce the scandalous conduct of the officer who thus, by his disobedience, destroyed the cause in which he was engaged, and brought ruin and desolation on all concerned with him; but no,—all the blame is thrown on the unfortunate Charles Stuart; and we are told—

"It was evident our destruction became inevitable, if the English got possession of the inclosure. The Prince saw this from the mince where he was posted, and sent

\* Robert, the first of the race, died broken hearted, his eldest son being murdered by his uncle, and his successor, James, detained a prisoner in England for 19 years;—accident, assassination, and the scaffold, terminated the lives of the majority of the intermediate kings, the flight of James II. of England, and the slight extinction of the family, bereft of dominion, and subsisting on galling bounty in a foreign land.

† The Pope we allude to is Alexander Pope, a edition of whose works by Mr. Bowles has even risen to a stout literary controversy. Mr. Bowles, like the Editor of Johnstone, has no much to stigmatize his subject—we confess not, to our minds, it is most disagreeable to be so laboriously put out of countenance by the poets or matters treated of; and we cannot reconcile the practice to any principle, either of style or propriety.

his aide-de-camp six or seven times, ordering Lord George to take possession of it. He saw that his orders were not executed; but yet he never quitted his place on the eminence. 'This, however, was a critical moment, when he ought to have displayed the courage of a grenadier, by immediately advancing to put himself at the head of his army, and commanding himself those manoeuvres which he wished to be executed. He would never have experienced disobedience on the part of his subjects, who had exposed their lives and fortunes to establish him on the throne of his ancestors, and who would have shed for him the last drop of their blood."

The common sense of mankind must revolt against reasoning like this; and many will agree with us in believing, that the depending answer of the Prince to the confederates at Ruthven, (see our last Number,) was the result of a feeling, that where he was disobeyed by one Murray, and betrayed by another, any further exertions were hopeless.

Having expressed this opinion, we shall abstain from minute animadversion; and briefly note, that the writer is often mistaken in his distances, and sometimes repeats his descriptions; and that the editor seems to us to wage an absurd war with the author of Waverley; as if that exquisite novel, instead of being a fiction founded on real events, was a regular historical work, tied strictly to facts.

We shall now beg leave to release our readers from controversial remark, and finish our critique with a few extracts. The following anecdote, which occurred on the advance of the rebels into England, affords an odd idea of the state of the country. The Chevalier says—

"One of my serjants, named Dickson, whom I had enlisted from among the prisoners of war at Gladsmair, a young Scotsman, as brave and intrepid as a lion, and very much attached to my interest, informed me, on the 27th, at Preston, that he had been beating up for recruits all day without getting one; and that he was the more chagrined at this, as the other serjants had had better success. He therefore came to ask my permission to get a day's march ahead of the army, by setting out immediately for Manchester, a very considerable town of England, containing 40,000 inhabitants, in order to make sure of some recruits before the arrival of the army. I reproved him sharply for entertaining so wild and extravagant a project, which exposed

\* The Secretary, who was a spy in the pay of the enemy, and divulged every plan to the Duke of Cumberland. It may be worth mentioning, that the private papers of this traitor are still in existence, and would, if published, throw great light on the history of the period. If we have been rightly informed, they are in the possession of his grandson, Mr. Murray, the able manager of, and performer at, the Edinburgh Theatre, to whom they devolved from his father, the late respectable actor at Covent Garden, and son of the Secretary. No family feeling could justly be hurt by the publication of these documents.—Ed.

him to the danger of being taken and hanged, and I ordered him back to his company. Having much confidence in him, I had given him a horse, and entrusted him with my portmanteau, that I might always have it with me. On entering my quarters in the evening, my landlady informed me that my servant had called and taken away my portmanteau and blunderbuss. I immediately bethought myself of his extravagant project, and his situation gave me much uneasiness. But on our arrival at Manchester, on the evening of the following day, the 29th, Dickson brought me about one hundred and eighty recruits, whom he had enlisted for my company.

"He had quitted Preston, in the evening, with his mistress and my drummer; and having marched all night he arrived next morning at Manchester, which is about twenty miles distant from Preston, and immediately began to beat up for recruits for 'the yellow haired ladie.' The populace, at first, did not interrupt him, conceiving our army to be near the town, but as soon as they knew that it would not arrive till the evening, they surrounded him in a tumultuous manner, with the intention of taking him prisoner, alive or dead. Dickson presented his blunderbuss, which was charged with slugs, threatening to blow out the brains of those who first dared to lay hands on himself or the two who accompanied him; and by turning round continually, facing in all directions, and behaving like a lion, he soon enlarged the circle, which a crowd of people had formed round them. Having continued for some time to manoeuvre in this way, those of the inhabitants of Manchester who were attached to the house of Stuart, took arms, and flew to the assistance of Dickson, to rescue him from the fury of the mob; so that he soon had five or six hundred men to aid him, who dispersed the crowd in a very short time. Dickson now triumphed in his turn; and putting himself at the head of his followers, he proudly paraded undisturbed the whole day, with his drummer, enlisting for my company all who offered themselves.

On presenting me with a list of one hundred and eighty recruits, I was agreeably surprised to find that the whole amount of his expenses did not exceed three guineas. This adventure of Dickson gave rise to many a joke, at the expense of the town of Manchester, from the singular circumstance of its having been taken by a serjeant, a drummer, and a girl. This circumstance may serve to show the enthusiastic courage of our army, and the alarm and terror with which the English were seized."

The latter part of the volume contains an account of the author's personal adventures. His escapes in the Highlands, and arrival at Edinburgh, are as romantic and extraordinary, as those of his royal leader; and he amuses us by the anxiety which he continually displays, to ensure, either in his wallet or in his stomach, a sufficiency of provision to last for any days of apprehended scarcity. In this respect he resembles the peck-puddings more than the hardy clans.

men. A salutary dread of the gallows seems also to have haunted him throughout.

"I bitterly (says he in one place) regretted that I did not meet my fate in the battle of Culloden, where I escaped so narrowly, and envied the fate of my comrades, who remained dead on the field of battle. The horrible idea of the hangman, with a knife in his hand, ready to open my body whilst yet alive; to tear out my heart and throw it into the fire, still palpitating,—the punishment inflicted on all those who had the misfortune to be taken and condemned,—always haunted my imagination. I could not get rid of the impression that I should also be taken; and the prospect of perishing in this manner on a scaffold, in presence of a cruel and brutal populace, almost tempted me to abridge my days upon the banks of the stream. My life had become a burden to me." At one time he was rowed across the water by two intrepid girls, when no boatman durst touch an oar for a proscribed wanderer. At another he was sheltered in a singular cave near Wemyss in Fifeshire, of which he gives the annexed description.

"This cavern is one of the most remarkable of the antiquities of Scotland, and, according to tradition, was, in former times, a heathen temple. It is dug under a hill. Its entrance is about five feet high, and three wide; and the foot of the hill is about thirty paces from the sea-shore. It is very high and spacious within, and appears to be of an immense depth. An adventure, which happened in this cavern to King James the Fourth of Scotland, has given celebrity to it. The King, who used to amuse himself in wandering about the country, in different disguises, was overtaken by a violent storm, in a dark night, and obliged to take shelter in the cavern. Having advanced some way in it, he discovered a number of men and women ready to begin to roast a sheep, by way of supper. From their appearance he began to suspect that he had not fallen into the best company; but, as it was too late to retreat, he asked hospitality from them till the tempest was over. They granted it, and invited the King, whom they did not know, to sit down, and take part with them. They were a band of robbers and cut-throats. As soon as they had finished their supper, one of them presented a plate, upon which two daggers were laid in form of a St. Andrew's cross, telling the King, at the same time, that this was the desert, which they always served to strangers; that he must choose one of the daggers, and fight him whom the company should appoint to attack him. The King did not lose his presence of mind, but instantly seized the two daggers, one in each hand, and plunged them into the hearts of the two robbers who were next him; and running full speed to the mouth of the cavern, he escaped from their pursuits through the obscurity of the night. The King ordered the whole of this band of cut-throats to be seized next morning, and they were all hanged."

We cannot follow the writer through all his perils till he reached London; nor will we follow him through his amours in that

capital. Suffice it to say, that he finally got to France, where he died in good old age, leaving this memorial of his early life, which will hand him down to posterity after the recollection of most of his companions has perished.

#### CUSTOMS, &c. OF AMERICAN INDIANS.

We now copy a curious account of savageinery in preparing for a ball.

"As I was once resting in my travels at the house of a trader who lived at some distance from an Indian town, I went in the morning to visit an Indian acquaintance and friend of mine. I found him engaged in plucking out his beard, preparatory to painting himself for a dance which was to take place the ensuing evening. Having finished his head dress, about an hour before sunset, he came up, as he said, to see me, but I and my companions judged that he came to be seen. To my utter astonishment, I saw three different paintings or figures on one and the same face. He had, by his great ingenuity and judgment in laying on and shading the different colours, made his nose appear, when we stood directly in front of him, as if it were very long and narrow, with a round knob at the end, much like the upper part of a pair of tongs. On one cheek there was a red round spot, about the size of an apple, and the other was done, in the same manner, with black. The eye-lids, both the upper and lower ones, were reversed in the colouring. When we viewed him in profile on one side, his nose represented the beak of an eagle, with the bill rounded and brought to a point, precisely as those birds have it, though the mouth was somewhat open. The eye was astonishingly well done, and the head, upon the whole, appeared tolerably well, shewing a great deal of fierceness. When we turned round to the other side, the same nose now resembled the snout of a pike, with the mouth so open, that the teeth could be seen. He seemed much pleased with his execution, and having his looking-glass with him, he contemplated his work, seemingly with great pride and exultation. He asked me how I liked it? I answered that if he had done the work on a piece of board, bark, or any thing else, I should like it very well and often look at it. But, asked he, why not so as it is? Because I cannot see the face that is hidden under these colours, so as to know who it is. Well, he replied, I must go now, and as you cannot know me to-day, I will call to-morrow morning before you leave this place. He did so, and when he came back, he was washed clean again.

"Thus, for a single night's frolic, a whole day is spent in what they call dressing, in which each strives to outdo the other.

"When the men paint their thighs, legs, and breast, they, generally, after laying on a thin shading coat of a darkish colour, and sometimes of a whitish clay, dip their fingers' ends in black or red paint, and drawing it on with their outspread fingers, bring the streaks to a serpentine form. The garments of some of their principal actors are singular, and decorated with such a number of gawags

and trinkets, that it is impossible to give a precise description of them. Neither are they all alike in taste, every one dressing himself according to his fancy, or the custom of the tribe to which he belongs."

It is singular to find the owl among the Chippewas, what the sacred geese were to the Romans. "There are," says our author, some animals which, though they are not considered as invested with power over them, yet are believed to be placed as guardians over their lives; and of course entitled to some notice, and to some tokens of gratitude. Thus, when in the night, an owl is heard sounding its note, or calling to its mate, some person in the camp will rise, and taking some *Glimmican*, or Indian tobacco, will strew it on the fire, thinking that the ascending smoke will reach the bird, and that he will see that they are not unmindful of his services, and of his kindness to them and their ancestors. This custom originated from the following incident, which tradition has handed down to them.

"It happened at one time, when they were engaged in a war with a distant and powerful nation, that a body of their warriors was in the camp, fast asleep, no kind of danger at that moment being apprehended. Suddenly, the great 'Sentinel,' over mankind, the owl, sounded the alarm; all the birds of the species were alert at their posts, all at once calling out, as if saying: 'Up! up! danger! danger!' Obedient to their call, every man jumped up in an instant; when, to their surprise, they found that their enemy was in the very act of surrounding them, and they would all have been killed in their sleep, if the owl had not given them this timely warning."

Talking of their wars: "it is (says Mr. Heckewelder) an awful spectacle to see the Indian warriors return home from a successful expedition, with their prisoners and the scalps taken in battle. It is not unlike the return of a victorious army from the field with the prisoners and colours, taken from the enemy, but the appearance is far more frightful and terrific. The scalps are carried in front, fixed on the end of a thin pole, about five or six inches in length; the prisoners follow, and the warriors advance shouting the dreadful *scalp-yell*, which has been called by some the *death-helloo*, but improperly, for the reasons which I have already mentioned. For every head taken, dead or alive, a separate shout is given. In this yell or whoop there is a mixture of triumph and terror; its elements, if I may so speak, seem to be *glory* and *fear*, so as to express at once the feelings of the shouting warriors, and those with which they have inspired their enemies.

"Different from this yell is the *alarm-whoop*, which is never sounded but when danger is at hand. It is performed in quick succession, much as with us the repeated cry of *Fire! fire!* when the alarm is very great, and lives are known or believed to be in danger. Both this and the *scalp-yell* consist of the sounds *ee* and *ah*, successively uttered, the last more accented, and sounded higher than the first; but in the *scalp-yell*,

this last sound is drawn out at great length, as long indeed, as the breath will hold, and is raised about an octave higher than the former; while in the *alarm-scoop*, it is rapidly struck on as it were, and only a few notes above the other. These yells or whoops are dreadful indeed, and well calculated to strike with terror, those whom long habit has not accustomed to them. It is difficult to describe the impression which the *scalp-yell*, particularly, makes on a person who hears it for the first time."

"Much has been said on the subject of the preliminary cruelties inflicted on prisoners when they enter an Indian village with the conquering warriors. It is certain that this treatment is very severe when a particular revenge is to be exercised, but otherwise, I can say with truth, that in many instances, it is rather a scene of amusement, than a punishment. Much depends on the courage and presence of mind of the prisoner. On entering the village, he is shown a painted post at the distance of from twenty to forty yards, and told to run to it and catch hold of it as quickly as he can. On each side of him stand men, women, and children, with axes, sticks, and other offensive weapons, ready to strike him as he runs, in the same manner as is done in the European armies when soldiers, as it is called, run the gauntlet. If he should be so unlucky as to fall in the way, he will probably be immediately dispatched by some person, longing to avenge the death of some relation or friend slain in battle; but the moment he reaches the goal, he is safe and protected from further insult until his fate is determined.

"If a prisoner in such a situation shows a determined courage; and when bid to run for the painted post, starts at once with all his might and exerts all his strength and agility until he reaches it, he will most commonly escape without much harm, and sometimes without any injury whatever, and on reaching the desired point, he will have the satisfaction to hear his courage and bravery applauded. But woe to the coward who hesitates, or shows any symptoms of fear! He is treated without much mercy, and is happy, at last, if he escapes with his life.

"In the month of April 1782, when I was myself a prisoner at Lower Sandusky, waiting for an opportunity to proceed with a trader to Detroit, I witnessed a scene of this description which fully exemplified what I have above stated. Three American prisoners were one day brought in by fourteen warriors from the garrison of Fort McIntosh. As soon as they had crossed the Sandusky river, to which the village lay adjacent, they were told by the Captain of the party to run as hard as they could to a painted post which was shown to them. The youngest of the three, without a moment's hesitation, immediately started for it, and reached it fortunately without receiving a single blow; the second hesitated for a moment, but recollecting himself, he also ran as fast as he could and likewise reached the post unhurt; but the third, frightened at seeing so many men, women, and children with weapons in

their hands, ready to strike him, kept begging the Captain to spare his life, saying he was a mason, and he would build him a fine large stone house, or do any work for him that he should please. "Run for your life," cried the chief to him, "and don't talk now of building houses!" But the poor fellow still insisted, begging and praying to the Captain, who at last finding his exhortations vain, and fearing the consequences, turned his back upon him, and would not hear him any longer. Our mason now began to run, but received many a hard blow, one of which nearly brought him to the ground, which, if he had fallen, would at once have decided his fate. He, however, reached the goal, not without being sadly bruised, and he was besides, bitterly reproached and scoffed at all round as a vile coward, while the others were hailed as brave men, and received tokens of universal approbation."

## ORIGINAL CORRESPONDENCE.

### TERRIBLE ERUPTION OF A VOLCANO.

*Butaria, 15th July.*—M. Baumhauer, Dutch Resident in the Island of Banda, in a letter of the 13th of June, reports that two days before, at half-past eleven o'clock in the forenoon, the famous volcano *Goenong Api*, broke out in so dreadful a manner, that every body who was not obliged by his duty to remain in Neira fled to Great Banda. At two o'clock vast red hot stones were propelled with prodigious force into the air, which, on falling, set fire to every thing combustible in the neighbourhood; while the most violent shocks rapidly succeeded each other, so that the houses, and even the vessels in the roads, were shaken. The smoke and ashes thrown out obscured the whole mountain, and sometimes also the neighbouring Lonthoir. In the evening the shocks became more frequent; the stones were projected to an elevation, calculated to be double that of the mountain, which appeared to be half covered with a sheet of fire. The scene was rendered more awful by the shock of an earthquake which was felt in the evening, and by a terrible tempest, so that the whole population passed the night in the greatest alarm, and at day light all the vessels fled from the roads.

During the whole of the 12th the mountain continued to throw out fire and stones, and the smoke and shower of ashes spread over Neira, Lonthoir, to the middle of the plantation of Bogauw. The nutmeg trees are covered with sand, and the wells which were not closed are brackish and useless. Vegetation is destroyed, the ground covered with grey ashes, and some birds and four-footed animals have perished; a new crater had been opened on the northwest side of the mountain, from which stones were rolled down, estimated to be as large as a house in Banda usually is. The most violent eruption, however, and the most fire, issued from the old crater. According to *Valentin*, the eruption of this mountain, which broke out in 1690, continued for five years; and an old man, whose respectable character

renders his testimony worthy of credit, affirms that it burnt from 1766 till 1775. The inhabitants therefore look forward with great apprehension to the future.

## ARTS AND SCIENCES.

### ORGANIC REMAINS.

"The subjoined extract of a letter from Dr. Tytler, dated the 9th instant, appeared in yesterday's Mirror.

"I forgot whether I mentioned to you, that in my late expedition to Kallinger, I picked up a fossil oyster shell on the summit of a high hill above the village of Bheamow; strange to say, this organic remain was in union with granite and basalt rocks. Along with many other circumstances this proves that these hills were formerly all under water. In the bed of a river near Rusa, I also found the fossil remain of the first joint of a human finger. It is evidently the first phalanx of a finger, and I think the first finger of the right hand, but it is more than twice the size of the joint of an ordinary man; ergo, the person it belonged to must at least have been twelve feet high. These two singular curiosities will shortly be dispatched to the Asiatic Society."—*Cul. Gov. Gaz. March 23.*

## LITERATURE & LEARNED SOCIETIES.

### OXFORD, Nov. 4.

Yesterday J. B. Yardie Buller, Esq. of Oriel, was elected Fellow of All Souls' College.

### Nov. 18.

On Monday, the 30th ult. Griffith Richards, Esq. of Queen's College, was admitted Master of Arts.

On Wednesday se'nnight A. J. Mure, Fellow of All Souls' College, was admitted Bachelor in Civil Law.

Thursday following the Degrees were conferred:

**MASTERS OF ARTS.**—Rev. G. Ingram Fisher, and Rev. W. Law Pope, Worcester College; Rev. H. A. Beckwith, New College; R. Hasler, University College; H. Hey Knight, Queen's College; Rev. R. Helme Cooper, St. Edmund Hall; Rev. W. Spencer Whitelocke, Balliol College; H. Barrett Curteis, Christ Church.

**BACHELORS OF ARTS.**—F. R. Thresher, Esq. Queen's College, Grand Compounder; J. Bradford, Pembroke College; J. E. Austen, and J. Broadwood, Exeter College; C. J. Bishop, St. Mary Hall; I. Bridgman, St. Edmund Hall; J. Barnes Bourne, and T. Tonken Hulme, Trinity College; J. Garnett Atkinson, and H. Perceval, Esq. Brasenose College; J. Birkett, Christ Church.

### CAMBRIDGE, Oct. 30.

The following degrees were conferred on Wednesday:—

**HONORARY DOCTOR IN DIVINITY.**—The Hon. and Rev. R. Boyle Bernard, of St. John's college, second son of the Earl of Brandon.

HONORARY MASTER OF ARTS.—Sir Gregory A. Lewis of Christ college.

MASTER OF ARTS.—R. Kennet Dawson, Caius college.

BACHELOR OF ARTS.—E. Hemmings Snood, Bennet college.

Nov. 3, the Rev. R. Stevens, of Trinity college, rector of St James's, Garlick Hithe, was yesterday admitted D. D.

10th. The Rev. Dr. Wordsworth, Master of Trinity college, was on Saturday last elected Vice-Chancellor of this university, for the year ensuing.

On Wednesday last, G. Raymond, Esq. of Trinity Hall, and the Rev. G. Bonner, of Emanuel coll. were admitted Bachelors of Civil Law; and R. E. Hankinson, Esq. of C. C. coll. Bachelor of Arts.

At the second meeting, for the present year, of the Cambridge Philosophical Society, on Monday evening last, several new Members were elected Fellows of the Society. Afterwards a paper was read by the Professor of Mineralogy, Dr. E. D. Clarke, upon a remarkable formation of *Native Aragonite*, in Devonshire. The Professor also communicated to the Society a discovery which he had made respecting the supposed Alabaster Sorors brought by Mr. Belzoni from Upper Egypt; and which he had found to consist of one integral mass of *Aragonite*. The Rev. Mr. Cecil, of Magdalen college, also read a very important paper on the application of hydrogen gas to produce moving force in machinery; giving at the same time a description of an engine for that purpose; which was exhibited to the Society.—*Cam. Chron.*

#### MR. ANGELO MAI'S LATEST DISCOVERIES.

The indefatigable Mr. Mai, now chief librarian of the Vatican, has lately made new discoveries of works hitherto unknown. In a Greek Codex, which contained the Orations of Aristides, he found extracts of Constantine Porphyrogenita, taken from the defective or lost books of Polybius, Diodorus Siculus, Dion Cassius, and other ancient authors. The MS. of these works is of the eleventh century, and very legible. In another Codex of the same Aristides, he found a treatise on Politics; and in a Vatican Codex, the second discourse of Aristides in favour of — Lastly, he has found seven complete books of the Physician Oribasius, only two of which were hitherto known; a Compendium of Eusebius, under the title of "Evangelic Questions," works of a Latin grammarian, and of a Latin orator; a Greek collection, in which there are many parts of the lost books of Philo; some hitherto unpublished works of Greek and Latin fathers, who lived before St. Jerome; and some small works of less importance.

#### FINE ARTS.

##### BRITISH GALLERY.

As of our readers as feel an interest in the promotion of the Fine Arts, may remember illustrious portraits, that formed the

last exhibition at the British Gallery; and that on the closing of that highly interesting display of talent, it was noticed, that certain of the finest specimens of Vandeyck and Rubens, were, by the liberality of the king and the noble directors, suffered to remain as examples for the students in the school of painting which they have established.

The term for these studies is now passed, and the ingenious labours of the students, amounting (from a hasty calculation) to nearly one hundred and fifty copies and studies, in oil, miniature, on ivory, and other modes of graphic imitation, were submitted on Saturday last, to the patrons of the Institution, a select number of amateurs, and others, the friends of the parties.

The leading subjects of attraction, and consequently those from which the studies have most generally been made, are portraits of the family of Charles the First. The same Sovereign on the white horse; the Sons of the Duke of Buckingham, and the Earl of Strafford; the Countess of Bedford, the Countess of Devonshire, the Countess of Leicester, and the Countess of Sunderland; all pictures of the highest class, from the imimitable pencil of Vandeyck. The splendid portraits, little more than busts, of Rubens and his wife, have also had a number of imitators. A few other pictures of celebrity comprise the whole collection.

For the greater part of these inestimable specimens, the students are indebted to the munificence of his Majesty, who contributed one-third to the whole collection that was exhibited in the summer season. The Earl of Egremont, with a liberality that is worthy of the true British nobleman, has followed this illustrious example, by depriving his own collection of the portraits of the four Countesses and the Earl of Strafford; invaluable treasures of art.

It cannot fail to be regretted, that so few professors of established reputation have appeared in the *Painting Gallery*; for, with the exception of Messrs. Jackson, R. R. Reinagle the younger, A. Robertson, and Leslie; the others are principally students, whose names are not yet recognized in the memory of the public; although, judging from what they have here produced, it may safely be inferred, that some will attain to eminence and due distinction.

Whatever obligations are owing to the honourable directors of this Institution from the artists, and others who regard the general interests of art, for their zeal in what they have begun, as the foundation of a school of painting; yet much is to be done for the ultimate attainment of so desirable a national object.

It is to be hoped, that a better and more commodious arrangement will be made for the students, as it is painful to behold them crowded together as they were, reduced to their *seats end*, to steal a glance at the picture they were imitating; some so placed, as to obtain only an occasional peep, at an almost telegraphic distance, through a long vista of living heads, at the graphic resemblance of the captivating queen Henrietta, or the lovely graces of the Countesses Devonshire,

Bedford, and Sunderland. Yet with these disadvantages, some pleasing copies and spirited studies have been produced; enough to satisfy the connoisseur, that the same exemplars contemplated under circumstances of due advantage, would be imitated by the same ingenious pencil with admirable fidelity.

Mr. Jackson's practice may be added as an instance of the benefit which the students would derive from the example of superior talent being more frequently mixed in the artistical groups at the Gallery. It would teach the management of the *palette*, and communicate to the intelligent artist the prime feature of art, the catching of the spirit and intention of the prototype. It must be admitted, this painter has a facility beyond his competitors; and it is due to his liberality to mention, that his kind hints and spontaneous superintendence, excited the emulation of the surrounding students. Indeed, such is the energy of his pencil, that he dashed in, with something like the inspiration of Rembrandt, in only two short mornings, a masterly copy of that illustrious painter's portrait by himself. Mr. Jackson's study of the head of Rubens has equal merit, being imitated with the transparency and richness of the original; the lower part of the head particularly, has all the fire of Rubens.

Mr. Reinagle, whose exuberant genius has taken flight to all the regions of art, and extracted sweets from every flower, has also made a study of this head, attentively observing those qualities in the style that he can best apply to his own practice.

Mr. Robertson, distinguished for his superior taste in miniature painting, has made an essay of his talent for oil, in two related copies of Vandeyck's Countess of Bedford, and Countess of Devonshire; the figures in a whole length scale of about twenty inches. These are spirited in touch and delicate in expression; and although the result of much study from the executive difficulties, incompatible with the management of so new a material, yet assume the appearance of being painted with great facility. The draperies, which are exquisitely wrought in the originals, are copied with felicity.

The cultivation of the talent promised in these first attempts, in a series of colour pictures of living beauties painted in the same feeling, would in no small degree augment the reputation of this esteemed artist.

A copy of Vandeyck's Earl of Strafford, a half length in armour by Mrs. Ainsley, could not fail to attract notice, having much of the tone and general effect of the picture. In the original works of this lady, it is not uncommon to discover an energy of style beyond the usual attributes bestowed upon the pencil in the hand of the fair.

We shall probably add to these last sketches, a few observations on the efforts of the students, in our next number.

#### ORIGINAL POETRY.

[By Correspondence.]

A FARWELL.

Yes,—I will join the world again,  
And mingle with the crowd;

And though my mirth may be but pain,  
My laughter wilderment of brain,  
At least it shall be loud!

'Tis true, to bend before the shrine  
Of heartless revelry,  
Is slavery to a soul like mine;  
Yet better thus in chains to pine,  
'Than ever crouch to thee!

Aye, better far to steep the soul  
In pleasure's sparkling tide;  
Bid joy's unholty sounds control,  
The maddening thoughts that o'er it roll,  
'Than wither 'neath thy pride.

Yet I have lov'd thee—ah, how well!  
But words are wild and weak;  
The depth of that perishing spell,  
I dare not trust my tongue to tell,  
And *averts* may never speak!

The stubborn pride, none else might rein,  
Hath stoop'd to love and thee;  
But as the pine upon the plain,  
Bent by the blast, springs up again,  
So shall it fare with me.

Still whilst I darkly sojourn here,  
Spite of each rain endeavour,  
Thy name through many a future year,  
Will be the knell to my lonely ear,  
Of bliss, gone by for ever!

Though thou hast wrapt me in a cloud,  
Naught now may e'er dispel,  
In silentness my wrongs I'll shroud,  
And love, reproach, pain, passion, crowd  
Into one word—FAREWELL!

'Tis done—the 'task of soul' is taught;  
At length I've burst the spell,  
Which round my heart so firmly wrought,  
'Tetter'd each lovelier nobler thought,  
And now **FAREWELL—FAREWELL!**  
C. R. S.

## TO SUSPENSE.

I'll-hoding hands! how oft thy fiery breath  
Hath stirr'd the storm of passion in my soul;  
Until the waves of thought spurn'd all con-  
troul,

And swell'd to a fierce Phlegmion! Beneath  
The vasty cope of yon eternal sky,

What hath the power to wither the deep heart  
Like thy swift gathering torture? Where the  
start.

Can match the brain-bewildering agony  
Thy presence doth create? My lot through life,  
Demon of dark uncertainty, hath been,  
To have sweet feelings maddened into strife  
By thy bliss-blighting influence; and each  
scene

Of beauty shadowed by thy wing accurst;—  
When shall I baffle thy fangs?—my heart be  
still, or burst!

C. R. S.

## TO BERNARD BARTON.

On the publication of his last Poem, "A Day in  
Autumn.

Though I am wedded to far other love,  
And far severer, than the musc requires;  
Friend—I rejoice in Feeling's every pore,  
At the pure fame of thy devout desires.  
Some Bards have kindled their too brilliant fires,  
At the gross altar, and unhalloved hearth;  
Thou hast been joined to more exalted choirs,  
And, uninspired to sing our second birth,  
Hast poured the ointment of thy praise upon  
the joys of earth.

London. X.

## SKETCHES OF SOCIETY.

## LETTERS FROM PARIS.—No. V.

Paris, Nov. 26th, 1820.

(The French Journals, continued.)

At present, the *Journal des Debats*, is far from possessing the authority and influence which it enjoyed under its title of *Journal de l'Empire*; but it is still regarded as an oracle in the northern courts. The *Austrian Observer*, and other journals of that class, merely echo the sentiments of the *Journal des Debats*, for no public print is more favorable to existing power. Among the proprietors of this journal, the two brothers, Bertin and M. Laborie, are distinguished. All three incurred the hatred of Buonaparte; a circumstance, which in itself is almost a title to the esteem of every honest person; for Buonaparte always hated those who refused to place themselves among his dependents. One of the brothers Bertin, was even confined in the temple, and subsequently banished by Napoleon; the other brother became Secretary-general of Police, on the downfall of the imperial throne. Unfortunately, he exercised the functions of that post during the most furious period of the regime of the *Ultras*; and consequently, when M. Decazes introduced a milder system of police, M. Bertin was dismissed. M. Laborie, another proprietor of the *Journal des Debats*, was secretary to Talleyrand; since the restoration he also exercised important functions; but he has proved himself a strenuous royalist. He is an extremely active man, and was once at the head of a great paper manufactory. One of his friends wishing to converse with him on some urgent business, and finding him always hurried and ready to fly out of doors whenever he began to speak, one day exclaimed in a fit of passion, "How is this, M. Laborie, are you determined to be always *Papyrus Cursor*?" I shall say but little of the other persons connected with the *Journal des Debats*. Since the death of the Abbé Geoffroy, there are but two abbés among the conductors of this paper; namely, the Abbé Mutin, and the Abbé Feletz, both of whom threw aside their ecclesiastical garb during the revolution; though from *esprit de corps*, they now labour with all their might to revive the period when Abbés were held in veneration. The articles on foreign politics in the *Journal des Debats*, are written, and occasionally fabricated, by M. Malte-Brun, who is a man of talent, a skillful geographer, but a curious politician. After being banished from Denmark, at the period of the revolution, because he defended democracy, he became the champion of the odious imperial despotism at Paris. From this extremity he fell into another; namely, he has become an ultra-royalist, and though a Dane and a Protestant, he writes in favour of the pretensions of the old nobility and the Catholic clergy. He and Bertin manage almost all the political part of the journal; but, I believe, the Abbé Mutin and a bookseller, named Nicolle, also occasionally write an

article. The *Journal des Debats*, is more over anxious to lead the fashion in literature; though it shews quite as much intolerance in that as in religion, and would fain persuade the public that there is no safety except in its own literary, political, and moral principles. It must, however, be confessed, that the *Journal des Debats*, now and then, contains interesting literary articles, which are partly furnished by the Abbé Feletz, whom I have already mentioned; and who is a man of some wit, though a gossipier; and by Hoffman, a dramatic poet, who is also a well informed man.

The *Gazette de France*, is the oldest journal in France, and, I believe I may add, in Europe; for it takes its date from the middle of the 17th century. For a long period France possessed no other public paper. It is rather curious, that the spirit of this journal has scarcely ever varied; for now, as well as formerly, it regards Court news as the object of greatest importance. The *Gazette de France*, gives a faithful account of the motions of every Prince in Europe; the fêtes and ceremonies that take place in the chateaux of the nobility, never fail to excite its admiration, and it gives detailed descriptions of them. But in this respect, it is certainly less prolix than the London journals, which invariably describe the dress of every lady who attends a court party. One of the conductors of the *Gazette*, named Lourdoux, accepted the post of Censor, and the *Gazette* accordingly pronounced several eulogiums on the Censorship; the Editor was, however, some time ago, condemned to pay a fine for an offence against the law of Censorship; and since then, the Censors have not been deemed quite so praise-worthy. The *Quotidien*, does not, like the *Gazette*, crouch before Princes, Dukes, and all who possess power; ultra-royalism is the idol of the *Quotidien*. It moreover assumes a degree of piety, which gives it the appearance of being written for, and by the clergy. It will readily be supposed, that it condemns all improvements brought about by the revolution; and that the old regime is its model of perfection.

The *Journal de Paris*, which, as its name denotes, is especially intended for the inhabitants of Paris, is at present a ministerial paper; but it would appear, that the ministry have not been very generous in rewarding the zeal of this journal.

The *Drapeau Blanc*, somewhat resembles your *New Times*. M. Martainville, was only known as the author of a few farces, performed at the minor theatres of Paris, until he was seized with enthusiasm for the cause of the ultra-royalists.

Since the re-establishment of the Censorship, the constitutional system (equivalent to your opposition) has been defended but by two journals, the *Constitutionnel* and the *Courier Français*; the former has great influence over that part of the nation which is opposed to the *Ultras*. But the conductors, though men of talent, are old partizans of Buonaparte, and are consequently suspected liberals. They are continually pronouncing pompous eulogies on the army of Buonaparte.

and its exploits; and they consider the military profession the finest of all professions. In this respect, the *Constitutionnel* is diametrically opposite to the most of your independent journals, which appear to seize every opportunity of opposing military authority. Such a system of abuse would appear anti-patriotic to our liberals, who fall into the opposite error. The conductors of the *Constitutionnel*, M. M. Etienne, Jay, and Tissot, were the Coryphæi of the Imperial Police. Their conversion, it must be confessed, is too sudden to be depended on, and there is every reason to suspect, that they are liberals only because they can be nothing else. It is unfortunate for France, that the good cause \* is not defended by men who possess purer principles, and who are more respected in society. Jouy, another partizan of Buonaparte, is one of the editors of the *Courier Français*, which, however, has not a very high circulation. Benjamin Constant also writes for the last mentioned paper; and he at first declared, that he would not write a line which should be submitted to the Committee of Censorship; but with all his talent, the conduct of Benjamin Constant, has always been contradictory.

To the Editor of the Literary Gazette.

LETTERS FROM A DISTINGUISHED PERSON.—AGE.—LETTER III.

"What! can the Devil speak truth?"  
Shakespeare.

Sir.—The business of this letter is,—now since what is called the *Great Drama* is finished, and the wars which have desolated Europe for the last twenty-five years, are at an end, to call upon those who chronicle events for the benefit of future ages, to do justice in their narratives to the part I have acted in this great drama. History is often, and not without reason, believed to give but a partial view of human affairs, and false representations of human character; and your race are sometimes magnified to divinities, or degraded to devils, for actions in which, were the truth known, they possessed little the merit or demerit, farther than as instruments in carrying my purposes into effect. How sadly has historical truth been violated, and its unity totally destroyed, by those mortals who have presumed to detail transactions in which I was the prime mover, without giving me even that honour which the clergy have unanimously agreed to concede—namely, the credit of those actions in which the ties of morality and religion are disregarded. History, in short, is a tissue of unconnected and improbable facts, without my agency being allowed and understood; but, viewed in its proper light, how simple and consistent are all the various scenes that have taken place on the earth's surface, and how consonant to all those principles, which regulate what you are pleased to denominate true philosophy!

If the mind, which plans and directs, be superior to the more corporeal force which executes;—if the showman, not the pup-

pets, have the merit of the movements, I trust it is scarcely necessary for me to say more to justify my pretensions in claiming the chief share in all the great transactions which in the course of centuries, have rendered this man a hero or that a patriot;—which have ended in conducting one man to a crown and honour, or another to a halter and disgrace, as circumstances suited; for the end, not the means, is the test of actions; and farther than this, the janglings of philosophers are but a play upon words.

With this key to the actions of men, it is impossible for those who read history to fail in tracing the workings of my hand, from the first fall of man from duty, down to the present convulsions which again threaten to disturb the repose of Europe. All whom evil passions guide, who have ceased to regard the good of their fellow-men in the prosecution of their own selfish objects; or (to use language more agreeable to the ears of my followers) all whom ambition animates, pleasure seduces, or for whom power has charms; whether that ambition, that pleasure, that power involves the happiness of one or of millions, are allowed by your divines to be under my immediate controul; and, of course, I, not they, if history is to be the vehicle of truth, ought to have the merit of the actions to which my disciples have owed their temporary celebrity. With the soul-less few who "do to others as they would have others do to them," and whose names are rarely found in any record higher than the stone which marks the termination of earthly hopes and fears, I profess to have nothing to do. As history forgets them, so let them be forgotten.

Look to the records of the ancient world, and you will recognize me in the omens and prodigies which often directed the counsels of Greece and Rome. I was then, as now, worshipped at the shrines of Bacchus and Venus, revered in the temples of Apollo and Minerva, and the fate of nations often hung upon my responses from the oracle of Delphi. I overthrew the liberties of Greece by my sway over Philip of Macedon, and conquered the world by the agency of his son Alexander. At Pharsalia I procured the extinction of Roman freedom; I planned the conspiracy which planted the dagger of Brutus in the bosom of the first Cæsar; and Brutus himself, as historians record, met me and his fate at Philippi. The celebrated triumvirate, so fatal to Roman independence, were merely my instruments. Cicero was slain at my instigation, to please the wife of Mark Antony; and Antony himself, and the bewitching Cleopatra, fell, when they could no longer serve my purposes. It was at my suggestion that Augustus "waded through slaughter to a throne;" and the succession of emperors (for I was never niggard of titles to my friends) who afterwards graced the imperial purple, have always, with scarcely one exception, been held as acting under my controul.

The dark ages which followed, and all the blood, and treasure, and human happiness, which centuries saw wasted in the decline and fall of the Roman empire, can be attributed to my procurement alone; and in the

crusades which powers called christian, afterwards termed and accounted so holy; I what purpose were they undertaken, what end did they serve, if not to extend misery and bloodshed in which I am mid-delight? More modern times affect to prize the credulity and ignorance which led to the expeditions; but what can they say of the own battles and their thousands slain; how can they be explained to the moralist the christian, otherwise than as victims human depravity immolated on my altars the altars of ambition, and vain-glory, a pride! If war, in its most civilized form ever had, or can be proved to have, any other result than to increase the amount of human misery, and add to the sum of human wretchedness, let my agency be distrusted and let the annals of Europe for the last hundred years be reckoned as fabled narrations.

The reformation of religion demonstrates my ascendancy in the councils of the inflexible father of the christian church; for I can deny, that the immediate cause that change of opinions was owing to the discreet sale of indulgencies,—a plan of expiating human guilt, and supporting the expenditure of the clergy, of which I dare not my enemies to rob me of the merit. The consequences of that event, the persecution, the cruelties, the burnings, could only have their source in my suggestions; and all to show with what deference I am listened to in assemblies of christian ministers, armed with the power of torture and of death. Europeans affect to look with horror on the savage nations who sacrifice human beings to my shrine; but how many christian processions, even in Britain, have had the same termination! And what can be conceived more consonant to my wishes than the not the impalements, or, to sum up all, as *on the day* of the catholic church of the present day?

The French revolution, it will scarcely be disputed, took its rise from a state of manners introduced and supported by me. When higher orders of society forget their duty to their God and to themselves, it is not wonderful that the lower classes should cease to regard them with respect. Luxury of principles may begin, as it usually does the court, but it soon descends to the country; and when there is no fear of a power which I tremble to say it is all accessible, can any brief, and infinitely less authority, make up for the deficiency? So it is in France; and it shall not be my fault, if it is not soon so in Britain.

The wars which followed were either incited, if not planned in all their details by me; and I appeal to the state papers of state policy of all the sovereigns of Europe for the truth of my assertion. Few of the first declarations of war down to the present from Moscow, it is not difficult to trace my preponderating influence over them, which appeared to make murder and war and conquest, if the words please, the chief purpose of a race of beings to term themselves rational, and who were admirably formed for peace and happiness.

\* Our Correspondent is, it appears, one of the Liberals.—ED.

That momentous retreat gave me no less pleasure than it did the opponents of France. Such a congregated mass of human misery has been seldom equalled; and I am not aware that, since the flood, I have witnessed any thing similar:

They ran and cried out—Death!  
Hell heard the sound, and back resounded—  
Death!

I trust, sir, I have said enough to convince even the most sceptical, of my universal agency in the affairs of mortals; and enough to secure my name the chief place in historical records, by every one who aims at the character of an impartial historian. I have, in fine, furnished a connecting link, which will render consistent actions formerly considered anomalous and improbable, and which will save future philosophers and future chroniclers much trouble in attempting to reconcile human motives to human actions, which never can be satisfactorily reconciled without the belief in my agency.

Finally, let the ladies recollect, that when in their parties scandal is the subject, or cards the amusement, I am present by myself or substitutes; that they never can have a *tête-à-tête* or an assignation with a dear friend, without my participation and knowledge; and that she who oversteps in the slightest degree the bounds of matron decorum or virgin modesty, has run into a snare, from which all the prudence of female heads, and all the purity of female hearts, rarely effect an honourable escape. I mention this not to deter my fair readers from those innocent amusements which kill time so agreeably; but the fact is, so many of the fairest forms and unsuspecting minds, swayed by fashions which they only despise, crowd to enter the lists of error, that, however contrary it may seem to my character, I almost pity the delusion which, for the fleeting and fevered enjoyment of a few moments, leads—finally and invariably leads—to those “regions of sorrow, and doleful shades,” (too well known, alas! to me)—

Where peace and rest can never dwell!

One word more, (as my friend Dr. Round-bottom says) and I have done. I trust that he clergy, who are in general so vociferous against me, will in talking of me in future, peak of me as it becomes one gentleman to peak of another. Vulgar abuse ill suits the dignity of their profession, or the importance of my character. Pray what would be their say if there were not, or if there never had been, a Devil. Not less than twenty thousand of them in this country eat their bread illicitly through my means; and if I were once fairly disposed of, it is demonstrable that there could be no farther occasion for tithes. I now I have a good many friends even among the clergy; and in the hope of their still increasing in number, I forbear saying any thing harsh: but let them look to it, for we are or fall together.

I am, sir, your most humble servant,  
and sincere friend,  
SATAN.

#### THE SULTANA VALIDE, MOTHER OF THE PRESENT SULTAN.

Our readers know that nothing is more difficult than to penetrate the mysteries of the seraglio of the Grand Signor. Some remarkable particulars have, however, lately transpired respecting the Sultana Valide, who died not long since. She was of a French family, born at Martinique. Her parents sent her to France at the age of fourteen, on board a merchantman of Marseilles. After passing the Straits of Gibraltar, the vessel was attacked and captured by a pirate, which took the crew and passengers as slaves to Algiers. The beautiful Creole was purchased by a merchant, who carried his valuable acquisition to Smyrna. Meantime news was received in France of the loss of this interesting young person: a relation who filled one of the highest posts in the department of the marine, and who was in high favour with the prime minister the Duc de Choiseul, discovered, after many inquiries, the place where Aline was held in slavery. The minister then commissioned the French consul to offer a considerable sum to ransom the handsome slave, and to restore her to the arms of a mother, who was inconsolable for her loss. The Armenian, satisfied with the ransom, was ready to accept the sum, and the consul already announced the happy result of his zeal and his negotiation, when Aline, from a caprice which her friends were very far from expecting, rendered all the measures useless which they had taken to procure her liberty. It is well known that the negroes, like all ignorant and superstitious people, have great faith in divination and fortune-telling. An old negress, a sybil respected by the blacks, and, it is said, in no little credit with the whites, had predicted to the charming Creole, that she would one day become one of the greatest princesses in the world. Aline recollecting this flattering prophecy, which her looking-glass farther confirmed, resolved to follow all the chances which destiny seemed to prepare for her. It was in vain that solicitations were employed, that remonstrances were lavished, to make her renounce a resolution which could not but appear extravagant: the hope of a crown triumphed over all the considerations that were suggested to her, and Aline re-embarked in slavery, which was to be for her the way to a throne.

The event soon justified her brilliant hopes. A rich and ambitious Turk, struck with her graces determined to purchase her and present her to the Sultan, who very soon noticed the young Odalisque. From the favour of the handkerchief to the honours of the favourite Sultana, the interval was not long; and the birth of a prince whom she gave to the Ottoman empire, in 1784, raised to the highest pitch the power of the Sultana Valide. From that time she enjoyed in the seraglio an ascendancy which she retained till her death, and the influence of which has gloriously extended beyond the tomb, in the person of her son, the reigning Sultan.

Several Frenchmen attached to the embassy of Count Choiseul Gouffier, were ac-

quainted with the origin and the power of Aline; her relations were apprised of her exalted destiny: but the auspicious etiquette of the seraglio always prevented every communication. The grandeur of the Sultana Valide did not change the affection of her family for this interesting branch of it; the memory of Aline has been perpetuated in it; a young person, beautiful as the first Aline, modest as herself, bears this romantic name—without aspiring however to the honours of the seraglio.

#### THE DRAMA.

COVENT GARDEN, *The Warlock of the Glen*.—An after-piece under this title was produced on Saturday: it is from the pen of Mr. Walker, author of *Wallace*; and on Wednesday this youthful poet, yet in his teens, furnished the whole entertainments of the evening at Covent Garden Theatre—a fact in itself sufficiently remarkable to merit a record in our pages. With regard to the *Warlock*, it is of the melo-dramatic cast; and of its genus, one of the most palatable things we have seen. Without any feature of novelty, its familiar materials are well put together; the action proceeds rapidly and directly, and the mixture of serious and sportive, villainous and virtuous, is calculated to amuse the mind from the commencement to the catastrophe. A wicked chieftain has, (he supposes) murdered his brother; and, usurping his honours, aims at the death of his infant nephew the real heir, and a union with his mother. In this design he is defeated by a vassal fisherman, and the *Warlock*, who turns out to be the true Lord saved from assassination. Some of the passages bear a stronger resemblance to scenes already on the stage, than a more experienced author would have dared to venture; but Mr. Walker appears to have gone on fearlessly, if not consciously; and his entire simplicity has secured his success. Yet the part where the *Warlock* issues from his cave upon the lady, child, and countryman, is similar to Octavian in the *Mountaineers*; and the attempted murder of the child is equally conformable in its lineaments to the *Babes in the Wood*: the fisherman is quite another *Walter*. The piece was exceedingly well received, and is indeed interesting, while the Scotch dresses, dances, &c. infuse a liveliness into it which is not its least recommendation. Mrs. Faucit performed the distracted mother with extraordinary effect; Mr. Abbott enchanted the audience as the *Warlock*; Farley (bating a most barbarous attempt at the Scottish dialect) gave a fine rough picture of rude feeling in the fisherman; Blanchard, his son-in-law, showed that there is no part he cannot do something with; and Miss Beaumont was a handsome highland lassie.

Mr. Vandenhoff is announced for *Lea* this evening. We are informed that he is engaged for three months, after which he goes to the Haymarket.

Twelfth Night continues to delight crowded houses. On Saturday, Yates took

part of Sir Toby, the Emery, indisposed. He lapsed into Falstaff in every scene, and walked, talked, and looked, as if he had weighed thirty stone.

On Thursday, the Slave was revived at Covent Garden, and Macready's powerful genius was finely relieved by the sweet tones of Miss Tree, who sang exquisitely in Miss Stephens's part.

On the same evening Julius Cæsar was well got up at Drury Lane: Wallack played Brutus in better style than any character he has yet sustained, and exceedingly raised our opinion of his capacity. Booth was Kean *alter et idem*, in Cassius, and acquitted himself ably. Cooper performed Antony in a very respectable manner; and upon the whole, this striking historical representation was cast in a way superior to our expectations.

Mr. Braham makes his debut to-night as Guy Mannering; and the public will delight in the re-appearance of so admirable a vocalist.

#### FOREIGN DRAMA.

The raising of the prices of admission at the Theatre Français was nightly the subject of a thousand jokes, and the audience laughed heartily at the manager's expense. The price to the pit was raised six sous. A few evenings ago one of the audience rose, and exclaimed with a loud voice: "Gentlemen of the orchestra, pray give us a little musical supplement for our six sous." Upon which another person called out that the combined force of the orchestra could not afford a sufficient compensation. The theatre resounded with laughter; and on this occasion, at least, the audience had no reason to regret the additional charge.

On Saturday last, during the performance of *les Déhors Trompeurs*, all the most favourite actors and actresses were received with loud hisses. *Faure* at length appeared, and a general tumult marked his entrance:—one of the audience exclaimed:—"Gentlemen, you are in the wrong, *Faure* is not one of the Committee." Immediately cries of "*Vive Faure, qui n'est pas du comité!*" were repeated on every side, and the hissing was changed to applause. This not a little astonished poor *Faure*, who is not much accustomed to such a reception.

#### VARIETIES.

**Education**—The Rev. Dr. Waugh, a worthy presbyterian minister, was enlarging the other night at a public Sunday School meeting, on the blessings of education; and turning to his native country, Scotland, for proof, told his auditors the following anecdote: At a board day at the Penitentiary at Milbank, the food of the prisoners was discussed, and it was proposed to give Scotch broth, thrice a week. Some of the governors were not aware what sort of soup the barley made, and desired to taste a specimen before they sanctioned the measure. One of the officers

was accordingly directed to go to the ward and bring a Scotchwoman, competent to the culinary task, to perform it in the kitchen. After long delay, the board fancying the broth was being made all the while, the fellow returned and told their Honours, that *there was no Scotchwoman in the house!*

**Anecdote**—The artist of a country sign tortured himself in vain to form a representation of St. George and the Dragon; he then tried to make a Nag's Head of it, but succeeded only in producing an uncouth unintelligible damb. Being poet as well as painter, however, he was happier in the motto which he affixed:

What this sign means no man can tell;  
But it means that here's good ale to sell.

**Bell's Messenger**, having made the *amende honorable* to the *Literary Gazette* last Sunday, we rescind our censure, and readmit its privilege to wear the Serjeant's coat on its head by way of distinction, as heretofore.

One of the Paris papers asserts it to be a well ascertained fact, that the celebrated iron *masque* was made of *black velvet*.

Le Vicomte Chateaubriand, so well known to the literary circles, has been appointed French Envoy Extraordinary and Minister Plenipotentiary to the court of Prussia.

**Gout**—Many remedies have been proposed and tried for the gout; but a native of Belgium now asserts that he has discovered, in Roman history, the only real cure for that most painful disorder. This new benefactor of humanity observes, that Hannibal, when crossing the Alps, made use of vinegar to melt the rocks; and that the gout being an accumulation of calcareous substances, vinegar, applied to the part affected, must also dissolve them. The only question therefore is, whether the anecdote of the vinegar be not a mere fable; and if all gouty patients are not cured now, *l'ivy* is alone to blame.

**Gymnastics**—There is to be established in Paris an institution for gymnastic education, to be called the *Gymnase civil normal*. The pupils of all the royal colleges will be admitted gratuitously to this establishment, which is to be under the superintendence of M. Anoros. The Gymnasium will also receive the pupils of other public schools, whose parents may think proper to send them.

**Anecdote of the late General Kosciuszko**—This beautifully turned compliment is taken from a Polish journal: a higher eulogy could hardly be pronounced on the hero of the tale: "Kosciuszko once wished to send some bottles of good wine to a clergyman at Solothurn; and as he hesitated to send them by his servant lest he should smuggle a part, he gave the commission to a young man of the name of Zeltner, and desired him to take the horse which he himself usually rode. On his return young Zeltner said that he never would ride his horse again, unless he gave him his purse at the same time. Kosciuszko asking what he meant, he answered,

"As soon as a poor man to the stable off his hat and asks for charity, the horse immediately stands still, and won't stir if something is given to the petitioner; and I had no money about me. I was obliged to make believe to give something, in order to satisfy the horse!"

#### LITERARY NOTICES.

Mr. Malthus's Principles of Political Economy have been translated into French by Mr. F. S. Constanco.

M. Pouqueville, late consul-general in France with Ali Pasha of Janina, has now presented the first four volumes of his "*Voyage dans la Grèce*" to the Duc de Nemours.

#### METEOROLOGICAL JOURNAL.

NOVEMBER 1820.

Thursday, 30 — Thermometer from 22 to 24. Barometer from 30, 41 to 30, 42.

Wind N. 4; and N. W. 4. — Cloudy all the evening, when it became clear.

DECEMBER 1820.

Friday, 1 — Thermometer from 29 to 31. Barometer from 30, 31 to 30, 32.

Wind N. E. and W. 4. — Generally cloudy.

Saturday, 2 — Thermometer from 30 to 31. Barometer from 30, 31 to 30, 32.

Wind S. W. 4. — Cloudy all the evening, when it became clear.

Sunday, 3 — Thermometer from 30 to 31. Barometer from 30, 31 to 30, 32.

Wind S. W. 4. — Generally cloudy. A little rain in the morning.

Monday, 4 — Thermometer from 31 to 32. Barometer from 30, 31 to 30, 32.

Wind S. W. 4. — Light clouds generally spread.

Rain fallen, .025 of an inch.

Tuesday, 5 — Thermometer from 31 to 32. Barometer from 30, 31 to 30, 32.

Wind S. W. 1, and 3. — Clouds generally passing; sunshine at times.

Wednesday, 6 — Thermometer from 31 to 32. Barometer from 30, 31 to 30, 32.

Wind E. by S. 4, and 4. — Generally cloudy. A missing rain in the morning.

Rain fallen, .05 of an inch.

On Sunday the 10th, at 20 minutes 10 seconds after 6 o'clock, the 1st satellite of Jupiter will emerge from an eclipse.

On Sunday the 17th, at 16 minutes 10 seconds after 8, the 1st satellite of Jupiter will emerge from an eclipse.

JOHN ADAMS.  
Edmonton, Middlesex.

Lat. 51. 37. 32 N.  
Long. 0. 3. 51. W.

TO CORRESPONDENTS.

In our next publication we shall have the pleasure of giving an account of the most interesting literary subject of the present time.

Wine and Walnuts in subsequent Numbers.

Erratum, in the 2d col. of the first page of the last Number, line 26, for "has" read "had."

### Miscellaneous Advertisements, Connected with Literature and the Arts.

THE Public is respectfully informed, that the Exhibition at the Egyptian Hall, Piccadilly, of Mr. JERRECAULT'S great Picture, (26 ft. by 16) of the WRECK of the MEDUSA FRIGATE, will close in a few days, previous to its being removed to Dublin.

#### Foreign and British Lithography.

THE rapid progress which the beautiful and highly interesting Art of Lithography is making both in this country and on the continent, must render Specimens of its comparative excellence particularly interesting at the present time. Under this impression, Boscay and Sons, 4, Broad Street, Exchange, beg leave to submit to the attention of the Public a List of Select Works lately imported from Munich and Petersburg, together with the choicest Specimens executed in this country, which they have just published gratis. A Catalogue of their extensive Collection of Foreign Engravings, Wood Cuts, and Books of Prints, including the Works of the most eminent Artists, Ancient and Modern, is also just published, gratis.

### BOOKS PUBLISHED THIS DAY.

In 2 vols. 8vo. price 1l. 1s. bds. with a Portrait engraved by Fittler: the second edition, of the

**LIFE OF WILLIAM, LORD RUSSELL,**  
with some Account of the Times in which he lived. By LORD JOHN RUSSELL. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Also just published, in 8vo. price 14s. the Third Edition of **THE LIFE OF LADY RUSSELL.** By the Editor of *Mad. du Deffand's Letters*, with Letters from Lady Russell to her Husband, Lord Russell; some Miscellaneous Letters to and from Lady Russell, &c. &c. from the originals in the Possession of the Duke of Devonshire.

In 2 vols. 8vo. price 1l. 1s. boards. A new edition, illustrated by Plates, with considerable Additions and Improvements.

**THE HISTORY OF GREENLAND,** including an Account of the Mission carried on by the United Brethren in that Country, with a Continuation to the present Time, illustrative Notes, and an Appendix, containing a Sketch of the Mission of the Brethren in Labrador. From the German, by DAVID KRANTZ. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Dr. Johnson declared that very few books had ever affected him so deeply, and that the man who did not relish the first part was no Philosopher, and he who could not enjoy the second no Christian.

A new edition, completed to the Death of the King.

In 6 volumes 8vo., price 3l. 3s. boards.

**THE HISTORY OF THE REIGN OF GEORGE**

THE THIRD. To which is prefixed, a View of the progressive Improvement of England, in Prosperity and Strength, to the Accession of his Majesty. By ROBERT HISSET, LL.D. author of the *Life of Burke*, &c. &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"Dr. Bisset's History is highly praise-worthy: it narrates with greater detail and completeness than Macfarlane, Betham, or Adolphus, the transactions of the present Reign. The style is natural, yet elegant; the information abundant, yet select; the criticism loyal, yet liberal. In short, it appears to us more likely than any of the rival Histories, to annex itself to Home and Smollett, as the regular and generally received Continuation of the History of England."—*Annual Review*, Vol. 2.

For other very favourable comments on this Work, see the Monthly Review, British Critic, Anti-Jacobin, &c.

#### Miller's Chemistry.

In 8vo. price 12s. boards.

**ELEMENTS OF CHEMISTRY,** with its Application to explain the Phenomena of Nature, and the Processes of Arts and Manufactures. By JAMES MILLAR, M.D. Fellow of the Royal College of Physicians, and Lecturer on Natural History and Chemistry. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and W. and C. Tait, Edinburgh.

#### Stothard's Normandy, &c.

In 4to. with numerous engravings, after drawings by Charles Stothard, F.S.A. Price 2l. 12s. 6d. boards. **LETTERS, written during a TOUR through NORMANDY, BRITANNY, and other Parts of FRANCE, in 1815; including Local and Historical Descriptions; with Remarks on the Manners and Character of the People.** By Mrs. CHARLES STOTHARD. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"We have to express our entire admiration of this Work, and announce it to our readers as one eminently calculated to amuse them in their manner, and delight them with its embellishments."—*Literary Gazette*, 1818.

#### To Hebrew Students.

By Boscay and Sons, 4, Broad Street, **THE STUDENT'S ASSISTANT, or EASY Hebrew Reading Lesson, with Points; selected from the Book of Psalms, with a Translation.** By G. F. WALKER. Price 1s. To be had of Lackington and Co. Finsbury Square; Baldwin and Co. Newgate Street; R. Pritchard, 124, High Holborn; and other Booksellers.

Three of the most interesting Books for Young People that have appeared for many years.

1. **THE TRAVELS AND OBSERVATIONS OF HAREACHI, the Wandering Jew; comprehending a View of the most distinguished Events in the History of Mankind, since the Destruction of the Temple of Jerusalem by Titus; with a Description of the Manners, Customs, and remarkable Monuments, of the most celebrated Nations; interspersed with Anecdotes of eminent Men of different periods.** Embellished with maps and numerous engravings; collected and arranged by the Rev. T. Clark, &c. Second edition, revised and improved, with many valuable Additions.

This work affords a systematic view of the Decline and Fall of Empires, the improvement in morals effected by the propagation of the Christian Religion, and the causes which tended to form the different kingdoms which now constitute the European confederacy.

2. **CLARK'S TOURS OF EUROPE AND ASIA.** Vol. 1. forming the Tour of Europe, and Vol. II. the Tour of Asia; price 8s. each, bound; both illustrated with Maps and Engravings; and abridged by the Rev. T. CLARK, from the following popular Works, viz.

*Europe*—Simonds's Tour in Great Britain; Daplin's Excursions in England, Scotland, and Ireland; Curwen's Letters from Ireland; Hall's Travels in France; Tappan's Tour in Italy; Mrs. Bailey's Tour in Ditto; Scopley's Journey through Portugal and Spain; Southern's Journey in Spain; Semple's Second Journey in Portugal and Spain; Farley's Excursions in Italy; Galia's Tour in Sicily; Galia's Visit to Malta; Galia's Tour in Turkey; Journal of a Tour in Holland; Nale's Travels through Germany, Poland, Moldavia, and Turkey; Dr. Thomson's Travels in Sweden; Mrs. Wolstonecroft's Letters from Sweden and Norway; Sir John Carr's Travels in Denmark; James's Travels in Russia; Dr. Macmillan's Journey from Moscow to Constantinople.

3. *Asia*—Lord Macartney's Embassy to China, from Sir G. Staunton and J. Barrow, Esq. F.R.S.; Lord Amherst's Embassy to China, from Nicolls, Ellis, Abel, and McLeod; Barrow's Voyage to Coochin-China; Morzer's first Journey through Persia, Armenia, and Asia Minor, to Constantinople; Morier's Second Journey through Persia, Armenia, and Asia Minor, to Constantinople; Lieut. Hewes's Voyage up the Persian Gulph, and Journey overland from India to England; Lieut. Col. Finckh's Journal of a Route across India through Egypt to England; Capt. M. V. Kitchener's Journey in Persia; Lieut. Colonel Johnson's Journey overland from India to England, through Persia, Georgia, Russia, Poland and Prussia; Elphinstone's Account of the Kingdom of Caubul; Capt. J. M. Kinneir's Journey through Asia Minor, Armenia, and Kurdistan; Galia's Letters from the Levant; Knox's Account of the Island of Ceylon, and of his Captivity during Twenty years; Capt. F. Beaufort's Karamania; Count Forbin's Travels in Syria and the Holy Land.

This Work will enable the Reader to acquire, in a concise form, a knowledge of all the material points of information contained in the most esteemed modern Books of Voyages and Travels, without those repetitions which have rendered so many works of great merit trite

and uninteresting. Price 8s. each, bound in red, and lettered.

Printed for John Stouter, at the School Library, 73, St. Paul's Church-yard; London. Of whom may also be had, by the same author,

1. **THE NATIONAL SPELLING BOOK, or Sure Guide to Spelling and Pronunciation:** the whole compiled from the Dictionaries of Walker, Sheridan, and Jones; the syllables divided and accented agreeably to their approved methods, and arranged on such a plan as cannot fail to familiarise the art of Spelling and Pronunciation, remove the difficulties, and facilitate rapid improvement in the English language. By D. T. BART. 1s. 6d. Fourth edition, revised by the Rev. T. CLARK.

"The spelling-columns in this Book appear to have been arranged and accented with much care and attention; so that children, who may easily be made to understand the marks here used to direct their pronunciation, will acquire an unusual degree of accuracy, and avoid much future trouble."—*Monthly Review*.

2. **THE NATIONAL READER:** consisting of Easy Lessons in History, Geography, Etymology, Mythology, Natural History, &c. The whole arranged on a new plan, and illustrated by nearly one hundred engravings; being a Sequel to the "National Spelling." By the Rev. T. CLARK. Second edition, price 3s. 6d. bound.

#### Sir Walter Scott's Works.

Beautifully printed in 10 vols., octavo, by Ballingall and Co. with ten Vignettes from original drawings, by Nasmyth, and Portrait of the Author, price 6l. boards.

**THE POETICAL WORKS OF SIR WALTER SCOTT, Bart.** Including the Ministry of the Border, and Sir Tristram. Printed for Archibald Constable and Co. Edinburgh; Longman, Hurst, Rees, Orme, and Brown; John Murray, and Hurst, Robinson, and Co. London. Of whom may be had.

The **POETICAL WORKS OF SIR WALTER SCOTT, Bart.** 12 vols. folio. Price 15s. boards.

Also, New Editions of **ROSELYN**, and the other Poems of the author, in octavo.

In 8vo. illustrated by Scriveren Engravings. Price 15s. bds.

**ILLUSTRATIONS OF PHRENOLOGY,** by SIR GEORGE STEWART MACKENZIE, Bart. F.R.S. L. & E. &c. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. 36, Chancery, London.

"A Work was undertaken for the purpose of giving a succinct, and, as far as possible, a popular view of the new system of philosophy; and of furnishing to the student the means of satisfying himself of its truth by instructing him in the art of observing. Among the subjects selected for illustrating the system, are the skulls of King Robert Bruce, a New Holland Chief, and of a French soldier of Napoleon Bonaparte's Young Guard. Also detached portions of other skulls. Among the Portraits selected are those of Dr. Spurzheim, Mr. Boscay, Mr. Watt, Professor Playfair, Handel, the Admirable Crichton, and Lucretia, the assassin of the Duc de Berri; engraved in the best style, from original pictures, busts, and drawings.

In a few days will be published, in 3 vols. 12mo.

**EDINBURGH: a Satirical Novel.** By the Author of *London*, or, a Week at St. James's.

"I shall show the Vice of Edinburgh, not as parallel, but as a contrast to those of London; and shall I omit a Portrait, or a Character, because the Original was my friend, or acquaintance?"—*Introductions*.

London: Printed for Sherwood, Neely, and Jones, Paternoster Row.

#### Travels in Africa.

In 8vo. with Two Maps, price 14s.

**AN ACCOUNT OF TIMBUCTOO AND HOU-SA, Territories in the Interior of Africa.** By EL HAGE ABD SALUM SHAHEENIE, a Native of Morocco, who personally visited and resided as a Merchant in those interesting Countries. With NOTES, Critical and Explanatory. To which are added, Letters, descriptive of various JOURNEYS through West and South Barbary, and across the Mountains of Atlas. By JAMES GREY JACKSON, Esq. London: printed for Longman, Hurst, Rees, Orme, and Brown.

**I.**  
**NARRATIVE OF THE OPERATIONS AND RECENT DISCOVERIES WITHIN THE PYRAMIDS, TEMPLES, TOMBS, AND EXCAVATIONS, IN EGYPT AND NUBIA; and of a Journey to the Coast of the Red Sea, in search of the ancient Berenice, and another to the Oasis of Jupiter Ammon.** By G. BELZONI. 4to. with a portrait, 2l. 2s.

**II.**  
**FORTY-FOUR COLOURED PLATES.** Illustrative of the Researches and Operations of G. BELZONI in EGYPT and NUBIA. Folio, 6l. 6s. Printed for John Murray, Albemarle Street.

No. 204.

SATURDAY, DECEMBER 16, 1820.

PRICE 8d.

## NEW ROYAL SOCIETY.

We have the highest gratification in stating that a great literary establishment is about to be formed, under the patronage of the King: the following plan has been published.

*Royal Society of Literature, for the encouragement of indigent merit, and the promotion of general literature. To consist of Honorary Members, Subscribing Members, and Associates.*

The Class of Honorary Members is Intended to comprise some of the most eminent literary men in the three kingdoms, and the most distinguished female writers of the present day.

An annual subscription of Two Guineas, will constitute a Subscribing Member. Subscribers of Ten Guineas, and upwards, will be entitled to privileges hereafter mentioned, according to the date of their subscription.

The Class of Associates is to consist of twenty men of distinguished learning, authors of some creditable work of literature, and men of good moral character; ten under the patronage of the King, and ten under the patronage of the Society.

His Majesty has been pleased to express, in the most favourable terms, his approbation of the proposed Society, and to honour it with his munificent patronage, by assigning the annual sum of One Hundred Guineas each, to ten of the Associates, payable out of the Privy Purse; and also an annual premium of One Hundred Guineas for the best dissertation on some interesting subject, to be chosen by a council belonging to the Society.

Ten Associates will be placed under the patronage of the Society, as soon as the subscriptions (a large portion of which will be annually funded for the purpose) shall be sufficient, and in proportion as they become so. An Annual Subscriber of Ten Guineas, continued for five years, or a Life Subscription of One Hundred Guineas, will entitle such subscribers to nominate an Associate under the Society's patronage, according to the date of their subscription.

The Associates under the patronage of the King, will be elected by respected and competent judges. The Associates nominated by subscribers must have the same qualifications of learning, moral character, and public principle, as those who are elected, and must be approved by the same judges.

Every Associate, at his admission, will choose some subject, or subjects, of literature for discussion, and will engage to devote such discussions to the Society's Memoirs of Literature, of which a volume will be published by the Society, from time to time; in which Memoirs will likewise be inserted the successive Prize Dissertations.

From the months of February to July, it is purposed that a weekly meeting of the Society shall be held; and a monthly meeting during the other six months of the year.

This is the suggestion of His Majesty, and we do not hesitate to say that it is

VOL. IV.

a manly, wise, and noble suggestion. We now throw together, without much order, the ideas which occur to us on the subject.

The polite literature of England has long felt the necessity of a rallying point, of being enabled to come before the country with something of the corporate and acknowledged form which has been found essential to all its leading institutions. Eminently calculated to be a great public agent, it has desired to have the stability and the honours that must give it public power, and excite public emulation. The Sciences have had royal patronage for more than a hundred years; the Arts have had it for half a century. But general literature, in its extent of history, philosophy, poetry, and political writing, is above all other movers of the national mind, and deserves and requires in all intelligent views of the public service, to receive the most liberal and dignified protection. Without this protection, this honourable and solemn summons to the service of the country, literature will be either neutral or adverse. We are not speaking in the confidence of the promoters of the present plan, and thus we implicate no man in our opinions; but we cannot persuade ourselves to draw any other conclusion from its success, than that of turning the genius of England into the current of English loyalty. The process may have been unintentional. There may yet be no result of the kind in the contemplation that formed the society. It may have been a mere generous zeal for the sufferings of obscure merit; and there have been instances of liberality in its illustrious patron, enough to give such a complexion to the design. It may have also been from the enlightened zeal and national feeling, which, knowing that literature is the glory of a kingdom, is desirous of adding that last wreath to all its wreaths of wisdom and valour. We have no knowledge that the idea looked farther. But we are full of the conviction that this measure will be the source of a renovated vigour in constitutional loyalty. The nature of the higher literature is to be tranquil. The poet, or the philosopher, may bear

his part in the hurry of the world, but he bears it reluctantly. His place of triumph is not in the streets and meetings of men, but in his study; his orators, and associates, and counsellors of wisdom, and consolers of misfortune, are his books; he lives among visions, a delighted, but a lonely and unearthly being.

Oh! for a lodge in some vast wilderness,  
Some boundless contiguity of shade,  
Where rumour of oppression and deceit,  
Of unsuccessful or successful war,  
Would never reach me more!

His penetration shows him the hollowness and heartlessness of the world, and he gladly turns from it. He despises the vulgar arts by which the vulgar are won, and leaves them to demagogues. He deems justly of the divinity of mind, and in his solitude trains it for victories that are not to perish while man lives upon the earth. He is the *Prospero* in his island, with the wand that summons at a wave all forms of dignity and splendour, and of sportive and winning loveliness, round him from the world of the air, and feels sorrow at parting from them even to resume his crown.

It is remarkable how little the higher literature has mingled itself in the disturbances of late years. The country has been in great agitation. The minor agents of mischief have been busied in dismantling, fragment by fragment, the constitution; the war on morals and the healthful allegiance of the English mind, has been desperate and unrelaxing; it has come, like the battle of the Trojans, with its tumultuary array, trampling and triumphing to the very trench; but no magnificent champion has been roused from his indolence, and come forth; no Achilles has flung down his idle lyre, and shouted, and turned the day. The battle has been nobly fought in the senate; great ability has been united with great zeal, and there has been conquered. But the true place of combat is without the walls of the legislature. It is in the fields and market-places, and highways, and dwellings of the multitude. And this battle must be fought, not by the sword, nor even by the tongue, but by the pen. The few poets who have taken a part in the

heat of the day have been on the disaffected side, and have, to the disgust of all good men, and the disgrace of their art, levelled their chief attacks at the individual to whom duty and feeling should have offered their first homage. The other able writers have kept aloof from the tumult, which they might have subdued, but which they waited for the command to subdue.

We are strong in the belief, that the literary mind of the nation, concentrated by the royal encouragement, would have scorched up and exhausted the malignity which has grown pestilential only by being left unvisited by the light. There is no exaggeration in this belief of the potency of even the gentler literature. History is crowded with examples of the wonders of popular poetry; factions have been beaten down, and thrones sustained by its vigour. In all the great commotions of states, the presence of literature has instantly been felt, as swelling or abating the storm—a mighty and superior influence, that speaking with the voice of man, has more than the power of man, and “it calleth to the winds and the sea, and lo! they obey him.” What this magnificent principle can do under the command of kingly authority, under the encouragement of national honours, with the eyes of the country turned on it, and the pre-eminent cause of morals, loyalty, and patriotism committed to its defence, is yet to be shewn. But by this Institution the first grand advance will have been made. We live in an age of aspiring literature: the poetic mind of England has surrounded itself with a new offspring. But we have yet ascertained no limit to its capacities of production. How many master-minds may be in reserve for the day when literature is to take its place among the honoured of the earth; to wear the emblems of that service which is the proudest freedom; to stand in the shelter of the throne which it secures; and share the national gratitude to the sovereign by whom that throne is filled in honour, and justice, and noble triumph over evil times! What intellectual influx may come when the royal liberality pauses in its orbit above “that tide divine,” and shoots down its ray direct! What chosen multitude may gather from the east and the west, to fill up the seats that are still empty at the great intellectual table! What “mute inglorious Miltons” may be summoned from the mountain and the valley to “vindicate the ways of God to man!”

What mighty spirits may be commanded from the sleep where they have lain as in the grave; to put on wings, and pass over the face of the people in light, and speak with the voice of the trumpet—must be told by time. But to this institution we look for results of which we must not presume to limit the expanse, the duration, or the splendour.

The prospectus at the head of this article, sufficiently details the more important features; and we have but few remarks to add. It strikes us, that the number of the associates is too narrow. It ought to comprehend all who have distinguished themselves in the literature that impresses the general mind, the eminent divine, the poet, the historian, the political writer, the great critic, the master of ancient literature. It ought further to have room for those persons of birth, or rank in the state, whose presence would add to the public respect for the body. Such men will command admission. But on the present scale, it must be by the exclusion of the true objects of election. By confining the number to twenty, literary jealousy may be roused, not conciliated: the excluded will be the hostile. The Institution ought to comprehend every man who has written with merit. The pensions may be but twenty; the honour of admission, with the right of succeeding to the pension, ought to extend to at least a hundred. In twenty, the vacancies will be so rare, and the canvassing so difficult, before a year is past, that a writer unassisted by powerful connexion, might as well expect to become a minister of state. The appointment on its largest scale ought not to wait for the accumulation of funds\*. The pension is valuable as a royal honour, but unimportant as an income. No man with talent enough to live by his pen, can set any serious consideration on an addition of 100 pounds to his revenue. No such writer could place it in competition with the honour; none would chuse to be excluded from the society, till they could receive the pension: all precedent is in our favour. The French Academy had forty members. Yet, even in this extension, the literary men were overwhelmed by the competition of men of rank. Cardinals, and Princes of the Blood, crushed out the life of the society. A hundred seats might have left room for all. The ob-

ject of true importance is to give the scattered genius of England a collective form; to gather it, like the steam, from wasting itself on empty air, and to combine and direct its irresistible ebullition to purposes of grandeur and utility that baffle all other strength. It should not be the prize for a few highly favoured and envied men, but a rational expectation and cherished honour for the whole multitude of accomplished minds; not the pinnacle of a rock to which no new adventurer could climb till the steeper on it was flung from its barren and solitary eminence, but the gate of a temple, into which the whole intellectual pomp might march together, and worship in hallowed and high-thoughted unity. There should be no exception, but for *disloyalty*, or *licentiousness*. The writer of studied insults to the throne, or to religious, or moral order, should be rigorously excluded, whatever might be his ability. And this, not simply for the punishment of the individual, but for a caution to the whole body of candidates. It is of the highest consequence to teach *early circumspection*, to the men in whose genius is laid so large a power of good and evil. Loyalty and morals must be inculcated by hope, till they become habitual from principle. We do not altogether approve of the title of the Institution. “For the encouragement of *indigent merit*, and the promotion of general literature.” We would omit the former clause. It unintentionally throws something like humiliation over the society. Ridicule will be busy, and the associates will be classed among the *indigent*. The justifiable pride of genius may be thus insulted, and the honour of the appointment will certainly be diminished, by the stigma of the title. Disaffection will call them the “King’s Paupers;” and no man is insensible to perpetual popular derision. The title ought to be changed; the object may be equally preserved. It might be fatal to the institution to commence by offending the delicacy of men, generally cautious of appearing to be dependent in proportion as they are humble in fortune; and it is for these, that the society should be constituted.

The encouragement of *indigent merit* is a charitable object. \* But in England the instances of merit totally destitute are rare; and they are never known but

\* It is, however, our earnest advice to every lover of literature, possessed of the means, to step forward promptly and co-operate with the King in this splendid design.

\* That excellent Institution, *The Literary Fund Society*, occupies this ground; and we rejoice to know, that its exertions and success are likely to be greatly increased at the next anniversary.

to be patronized. From *Stephen Duck*, down to *Clare*, there is no instance of a want of public generosity. To give a provision to all the rustics who would demand it on the ground of making rude verses, would exhaust ten times the funds of the society. But by another method, great service might be done. The difficulty with a young writer, is to appear before the public. The expense of printing is beyond his means; and few printers will adventure on an untied name. The society might receive all such works, subject to the decision of a Committee as to their hope of success, and print them; give the profits to the author, with perhaps a small donation, as a prize and an assistance, and thus launch him into the world. Authors of valuable works too costly for the hazards of the publisher, might also be assisted in their publication. This rule would cheer many a venerable labourer in the literary field, while it secured the benefit of his labours to the public. A similar arrangement would be well worthy of the other royal societies.

An important service might be rendered, by taking under their patronage some of those poor and singular boys of genius, who distinguish themselves at school, and superintending their education.

The arrangements of the society would be a matter of further and easy consideration. All the officers connected with its literary concerns, except the president, should be *provisional*, for the first year, or until the society assumes its settled shape. The Secretaries are of the utmost importance: For in a short time all the vital business comes into their hands. They are virtually the directors. They must be of decided literary powers. The French Academy rose or sank with the reputation of the secretaries. The most important part of the readings before the society was of their composition.

D'Alembert's volume of *Discourses on the eminent members*, is a striking monument of the labours of his place. Besides those, he left not less than sixty in manuscript. At all the sittings, it depended on this able and versatile man to sustain the interest of the assemblage. The secretaries must be not mere scholars, nor mere men of business; their chief requisite is eloquence as writers.

It is yet to be settled, whether the society is to have periodical meetings yearly, or within any other limit, to which the public are to be admitted; a

measure which we strongly advocate. Whether candidates are to be allowed to canvass for admission; a mode of which we fully disapprove, as tending to infinite meannesses and dissatisfactions.

Whether memoirs of the deceased members are to be read by their successors, or read at all, &c. &c.; a matter which produced great excitement in the French Academy, but which might be in some degree adverse to our habits. All may be the subject of future discussion. But on all possible *publicity* we insist, as the life-blood of the plan. The nation takes no interest in proceedings with closed doors. Private meetings and consultations are of course necessary; but the public must have the power of being occasionally present, as in the Foreign Academies, or even the spirit of the members perishes. There is some frivolity undoubtedly in these promiscuous admissions, but there is also solid service. The secret of the superior activity of the French Literary Societies, lies in those crowded displays. The object is to bring the nation to feel an interest in this assemblage of its literary champions; and the interest is to be maintained in no other way than by suffering them to be seen. Observations still crowd upon us; but we must have done. If we have an additional satisfaction, it is that of recollecting the source from which this design emanates. It enables us to pay a new homage to the altar and the throne. We have taken no part in the late convulsions of public opinion. Our business is with books; we leave the mob to more ardent ambition. But it is a high gratification to feel that the first work of the Royal mind, after this season of offence, has been to exhibit patriotism in its most unquestioned form, to answer unnamed imputations by kingly liberality, and in the hour when fools and traitors insulted the majesty of the throne, to show its forgiveness in ministering to the present and perpetual glory of the nation. We are also glad to find, that to the detail of this design the aid of the altar has been summoned; and that what was conceived in patriotism, is to be completed in learning, wisdom, and piety. The prelate\* to whom the arrangements are committed, is a man honorable by every title of literature and religion. The civil fabric is thus consecrated. We look to the commencement of this magnificent Institute with strong anxiety. It is the true way to draw off the general mind from petty

discontent, for it points its view to conquests and honours, in the very competition for which a new and muscular energy is elaborated in the mind. The common trophies of empire pass away by the inevitable law of nature. Victories are forgotten in the dimness of years, or reprobated as a melancholy waste of human happiness; but the triumphs of literature are without regrets, and imperishable. They are the generous wealth that may be lavished on all the earth, through all its generations, without diminishing the treasure of the bestower; the great legacy of nations, that makes the giver only the more opulent, and superior to the tomb; the illustrious liberality that falls nowhere in vain, but returns like the rain from heaven, to its original source, after having gone through its mighty round of fertilization†. Attica is a haunt of barbarians, and its triumphal arches are dust and ashes. But what civilized man treads upon the soil, but as on the place of a supernatural presence? The land is haunted to him by the spirits of the mighty; there is a charm in the name of Greece; and its freedom is among the hopes and prayers of all the nobler minds of the world. The day of vicissitude has not come upon England; but she has her trials, and must not abandon a single source of stability and confidence against the future.

Ἰδὲ μοι, μέγιστε, θεῶν τε δαίμων,  
τ' ἄλλοις ἑστῶσι τῶν δ' ἐμὴν ἄχραντον;  
Τὰς μὲν μετὰ τὸν ἥϊον  
Θαῦμα τίς ποτε μῆνιν εὐδότης.

EURIP.

† His Majesty has, we believe, intrusted the formation of the Institution, (The Royal Society of Literature,) which has called forth these remarks, to the learned and eminent Prelate, whose name we have already mentioned, Dr. Thomas Burgess, the Bishop of St. David's. The names of several individuals who have taken part in bringing the design to its present maturity, have been mentioned to us, but we do not feel as yet at liberty to make them public. Suffice it to say, that other branches of the Royal Family have become subscribers; that Ministers give their aid, that many of the most distinguished among the clergy concur in promoting the plan; that the leading members of both the universities are amongst its friends. The funds are already considerable, and we are sure this public notice will raise them considerably; as heretofore, the only question has been "by whom the Society was projected, under whose auspices formed, and where the subscriptions to establish it in splendid sufficiency were to be made?" Having shown that the highest authority not only sanctions but zealously favours the design; that his Majesty may be considered as its *person* as well as *royal founder and patron*; we are certain that men of every rank and station in the community will press forward to have the

## REVIEW OF NEW BOOKS.

*Amarnthus the Nympholept; Lucy Miford, and other Poems.* 12mo. pp. 232. London, 1820.

There is an American bird of singular qualities. It is called *The Mocking Bird*, and has the power of imitating the notes of every chorister in the grove, from the dulcet twitter of the humming bird, to the harsh scream of the Maraw; while its native song is undistinguished by any peculiar harmony. Were we to imagine a human creature of this genus, we should fancy a poet to whom it was alike easy to assume the chirping of the honourable Mr. S., the melody of Moore, the intensity of Byron, or the swelling tones of Scott; but who, when he attempted original verse, did not produce any thing strikingly different from the more common decencies of the day. Such would be *Mr. Horace Smith*, one of the authors of the justly famed *Rejected Addresses*, and the reputed writer of *The Nympholept*.

*The Nympholept* is a pastoral drama, in three long acts; but before drawing up the curtain, we had better inform our readers what the name means; for the pliancy of Nympholepsy has either become extinct, or is, in our times, attended by other symptoms and results. It seems then that "The Nympholepsy of the Greeks, and the Lymphati or Lymphatici of the Romans, were men supposed to be possessed by the Nymphs, and driven to phrensy, either from having seen one of those mysterious beings, or from the maddening effect of the oracular caves in which they resided. Plutarch particularly mentions, that the Nymphs Spira-

honour of contributing to its endowment and completion.

We have obtained a copy of the first prize questions to be proposed (which, we understand, will soon be officially announced) and take the liberty of anticipating their promulgation; they are as follows.

1st. For the King's premium of one hundred guineas.

On the age, writings, and genius of Homer; and on the state of religion, society, learning, and the arts, during that period, collected from the writings of Homer.

2d. For the Society's premium of fifty guineas. Dartmoor, a poem.

3d. For the Society's premium of twenty-five guineas.

On the history of the Greek language, on the present language of Greece, and on the differences between ancient and modern Greek.

The first has already, if we remember rightly, been a subject of learned discussion, as well as of a recent work, by Mr. Payne Knight. The second is by no means so barren of incident for the highest poetical illustration as its name might seem to import. And the third is replete with interest.

We shall, we trust, be enabled to communicate further details as they arise, respecting a plan so important to British and British literature, in subsequent Numbers of the *Literary Gazette*.

gittides haunted a cave on Mount Citharon, in Boeotia, in which there had formerly been an oracle, and where, from the inspiration they diffused, Nympholepsy became an endemic complaint. According to Festus, it was formerly thought that all those who had merely seen the figure of a nymph in a fountain, were seized with madness during the remainder of their lives."

"It was the popular opinion throughout the whole of Greece, that the nymphs occasionally appeared to mortals, and that the consequences of beholding them were generally to be deprecated: the result among such a superstitious and imaginative people may easily be conjectured. Terror combined with religion in disposing the mind to adopt delusion for reality; and visions became frequent and indisputable in exact proportion to the prevalence of timidity and enthusiasm. Sometimes they were not altogether imaginary in their origin. Partial glimpses of some country girl, tripping, perhaps through the twilight grove to meet her lover, or stealing into the copse at day-break to bathe in its embowered waters, were quite sufficient to inflame the combustible fancy of a Greek. Others, probably, without such excitement of the external sense would sit amid the solitude of the forest, brooding over the tales which peopled it with nymphs, fauns, and satyrs, until they realized them to their mind's eye, and became Nympholepts the more incurable, because no tangible object had deranged their faculties, and they had consequently no means of proving the fallacy of their impressions."

Upon this basis, the author has constructed his drama; in which Amarnthus, a mortal, is seized with Nympholepsy, and cured by (Dryope) a wood-nymph's marrying him, by which act she becomes also mortal, and releases to the sky a nymph of the air, (Urania), whose doom was involved in this event. The other characters are, Theucaria a virgin priestess of Pan; Enome, a Delphic girl, endued with a prophetic spirit; Amarillis, a shepherdess beloved by and loving Phœbidas; Phœbidas; Celadon, a rich Athenian of a vicious character; and one or two other unimportant personages.

In the plot the whole circle of heathen mythology is ransacked, and the scene, "Arcady the blest," is peopled by all the agricultural divinities of early Grecian theology. However, as it is more as a poem than as a play, that Amarnthus presents itself for judgment; we shall refrain from inquiring into its dramatic pretensions, and look at it simply as a pastoral in dialogue.

In this point of view, it appears to us to be of a description, as mixed and full of contrariety as almost any production which we ever read. The gold and the clay are conjoined as in Nebuchadnezzar's image. There are passages of extraordinary beauty, and there are others as mean as possible. The prevailing fault is a decided tendency towards the lowest species of poetical composition of the present period—that which mistakes vulgarity of phrase for simplicity, and affectation for grace; and the use of

the minute, which all true poets have rejected, for originality. We have too much of the "gugglings" of water, and the "gushes" of sound, and the "flashes" of light; and those ridiculous expressions which characterise a school eminently vulgar in poetry, and silly in metaphysics. We have also its "upblings," "up-breathings," "up-soarings," and "up-turnings;" its "out-drings," and "out-thrustings;" "bathing in lush greenness," and similar puerilities. Indeed this sort of phraseology is employed so profusely, that were it not for the general tone of feeling and sweetness in the piece, we should believe that it was intentionally used for burlesque. Such, we are sure, must be the effect of rhymes like Narcissus-T. pariasus; Nepeenthe-sent thee; perpetually-open valley, &c. —and especially when helped on by the mean words which so often occur in the verse, as will be seen a several of our extracts, and of which we therefore offer but a single dogmatic illustration.

Phœbidas and Amarillis!  
Phœbidas and Amarillis!  
By your marriage celebration,  
Pan ordains you to fulfil his  
High and holy declaration.

The versification of the entire drama is of every measure, the transitions being so rapid as they are sometimes "out of all rule." But it is generally smooth, though not a few instances might be quoted in which no musical ear can fail to be offended. A line like the following is intolerable.

"I must haste brief

"Water from the holy well for our lotions!" It is truly surprising to meet with so much sweet poetry, coupled with so many proofs of bad taste—as many clear manifestations of true genius, linked to examples of the merest metrical glibness. We cannot account for it except on the hypothesis, that the author has mistaken his way—which to us appears to be the ludicrous, with bursts of pathos, and not the reverse sentimental. And yet it is in the most familiar scenes that the greatest fault is obvious: they are almost invariably mean, though the serious and higher efforts are some of them excellent, while others are no farther blemished, than by the employment of some poor word or commonplace combination of language.

For example, we are told of "the fall of reverend knees;" of "showering of palm sashes elsewhere;" of persons walking in corn-field being "sown by waving sheaves of gold, embossed with Flora's rich embroidery;" of "fluent lips being tasted;" of "breezes that with beaks resound;" of being in "a shuddering shiver;" of "unfading book of fate;" of a "heart throbbing with" and of a multitude of circumstances which by such forced or concerted epithets and few brief quotations will further expose this preposterous system. Celadon is endeavouring to rouse Amarillis, touching one "plump Tilphosa;" and replies—

Thy poisonous tongue, unseasonably sweeten'd.

ly the dread frown of tower'd Cybele,  
Thou hast belied my Phœbidas; for he  
Is true as is the shadow to the sun,  
Sees to their queen, or swallows to the spring.  
O Celadon, unkind! was this well done,  
Afflicted as I am to sting mine ear  
With thy base fictions? Slanderer, I sing  
Thy falsehoods in thy face.

*Celadon.* Close not that mouth,  
Altho' it scold me, nor let disappear  
Those teeth, whose whiteness makes the lip  
more red,

Like snow-drops set in a carnation-bed.

How blind thou art  
To his known falsehood; but no longer worry  
Thy soul about him. Is not his desertion  
Base? Is not absence infidelity?

And doth it well become a modest maid  
To follow one who holds her in aversion?  
*Amarillis.* Traducer, he does not. O I could  
cry

To hear him thus abused!

This "scorery" is a favourite word. Dry-  
ope, in the most solemn manner, describes  
Amarnythus as

Haunted with nympholeptic dreams, that dull  
His bright conceit, and worry him to madness.

But to pursue the dialogue between Celadon  
and Amarillis—it proceeds and ends in the  
same style.

Back, base man!

Or I will set my dog at thee By Pan!  
If thou hast mov'd a single step, my crook  
Shall feel thee to the earth. Hie, Rover, leap,  
And chase my thirsty flock from yonder swamp,  
That I may guide them thro' the glen to the  
brook

Down in the vale. Thon wealthy wooer, keep  
Thy tales, seductions, gold, and guilty poem  
For city damsels. [*Exit.*]

*Celadon.* Foil'd by a rustic mix!  
Rejected, lectured, and a clumsy clown  
Preferred'd!—"Tis well; but if the vixen thinks  
To 'scape my vengeance, she has little known  
Celadon's nature. In son secret grove  
I'll lie, and plot revenge for slighted love. [*Exit.*]

Nor are the colloquies between the lovers  
one jot more elevated; and we can exhibit  
no clearer mistake of the low for the simple,  
than the following.

*Amarillis.* Gather up your kine!  
For see, my sheep have sought the hazel shades.

*Phœbidas.* Upon this primrose bank I'll sit.  
*Amarillis.* And here

Beside you will I listen to your tale.

*Phœbidas.* When last we parted, Amarillis  
dear,

You know I was a goat-herd in the vale  
Of Hamont, tending curish Cymon's flocks.  
There is a sloping field above the rocks  
Of Homole, where in luxuriance grow  
Wild honeysuckles and cyperus low,  
Which goats delight to browse; there mine I  
drove,

And sat and piped beneath an almond tree,  
Or caroll'd old bucolic songs of love,  
Till gazing on a distant sail at sea,  
I thought upon the shepherds of the deep,  
Who plough the wave, and sometimes only  
reap

The wind. Far happier is the goat-herd's lot,  
Said I, and I far happiest of the clan,  
Could but my Amarillis share my cot;  
And then I gather'd rubies, and began  
To weave a garland for you, intertwined  
With violets, hepaticas, primroses,  
And cory anemone, that we'er yncolore

Her lips until they're blown on by the wind.  
Meanwhile my dog—

*Amarillis.* Stop, Phœbidas, for lo!  
You cow have wander'd, and on Milo's lands  
His olives crops.

*Phœbidas.* Off, Whiteface! down below,  
To the shady glen where yon black heifer stands,  
Whisking the flies off in the rusty brook.  
Ill luck betide the beast, she will not hear!  
O for a stone to throw! Lend me your crook,—  
I'll get near her she shall feel my blow.

*Amarillis.* O hurt her not, poor beast, nor go  
too near,

Least she should gure thee:—recollect the woes  
That Venus proved for her Adonis dear,  
And think of me. See, see, the wanderer goes  
Close to the herd, so, Phœbidas, sit here  
Close by my side, and let me hear the rest.

*Phœbidas.* Where was I, Amarillis?  
*Amarillis.* You were saying  
About your dog.—

*Phœbidas.* Ay; he with heat oppress'd  
Lay fast asleep, by starts and growls betraying  
That he was dreaming like his master. I  
Dreaming of this, in reverie profound,  
My flowery garland wove, smiling to hear  
The cuckoo's note which on the breeze swept by,  
And then was lost again, when oh, sad sound!  
The cough of Cymon grated on mine ear;  
And soon I saw him hobbling up the rock,  
Rage in his face, and curses on his lip.  
Alack! no wonder; for my truant flock  
Had climb'd the fence where his young vines  
were growing,

And nibbled every green and tender tip;  
The while, unseen, a fox had seiz'd my scrip,  
And left me dimmerless. His staff first throwing,  
He smote poor Lightfoot, who, with howling  
snarl,

Limp'd home, and cannot walk even now. On  
me

Next burst his wrath.

This reminds us of the ballad ditty—

When my love was sick and like to die,  
Oh, thither went my dog and I.

We wish however to get to the end of the  
disagreeable part of our task; and, instead  
of pointing out what we cannot help cen-  
suring in this production, indulging in the  
quotation of its beauties. We shall there-  
fore with the utmost brevity advert to the  
remaining blemishes. The following touch  
at simplicity, conveys an idea eminently  
ludicrous: an enthusiast of nature exclaims,

How sweet are the remembered smells  
Of infancy!

We now give an example of a fine image  
being pursued till it becomes absurd.

What! think'st thou that the whistling wind  
Pipes in the storm for nothing? Idle notion!  
'Tis to call up the howling waves, confound  
In the sea's depths. No wave of ocean  
That, in the solitudes of space,  
Upturns its foamy face  
Unto the moon, and, with a gushing sigh,  
Sinks down again to die;  
But is commission'd, and that parting breath,  
Perhaps, a flat bearer of life and death.

Why do the runnels urge their races  
Through the earth's crevices and secret places?  
But that their tongues with nimble guggles  
May scatter orders as they flow,  
And summon from the caves below,  
Agents for the earthquake's struggles.

When on the ground I lay mine ear,

I hear their secret plots  
Come murmur'ing up from the central grotto.—

That, from the sublime to the ridiculous  
is but a step, could not be more aptly illus-  
trated, than by the first half of this pas-  
sage, compared with the last, wherein affec-  
tation supercedes the genuine inspiration of  
poetry. The same error infects the follow-  
ing description of *Love*, in which the noble  
thought of a great bard is ramified into im-  
becille particularity.

Love governs earth and air; the flocks and  
herds

Join to the twitter of the billing birds  
Their hymeneal cries. Love's suit  
Even the dumb inanimates pursue.

The ivy clasps the oak, the vine the elm,  
Pouting her purple lips to kiss his root.  
By touch of blossom'd mouths the flowers re-  
new

Their races odorous. This woody realm  
Is Cupid's bower; see how the trees enwreath  
Their arms in amorous embraces twined;  
The guggles of the will that runs beneath,  
Are but the kisses which it leaves behind;  
While softly sighing thro' these fond retreats,  
The wanton wind woe every thing it meets.

The answer to this declamation is equally  
far fetched. We shall but mention, that the  
author is guilty of some anachronisms, as  
when he makes the shepherds of Arcadia  
talk of "*Lucifer*" as an evening star; and  
a priest of Pan call for his "*Alb and Amice*,"  
the last-mentioned garment being so pecu-  
liarily Romish.

But we now approach pleasant ground.  
The Nympholept is thickly studded with  
gems of the purest lustre; and has many  
splendid parts which breathe the very soul  
of poetry, without an alloying taint. The  
former it is difficult to detach; but we shall  
endeavour to pick out a few of them as ex-  
amples.

Contrast between luxury and nature.  
What pompe can courts and capitals supply  
So gorgeous as the rising of the sun  
Over this vale of Tempe? so sublime  
As the sea's deep-mouth'd voice in harmony  
With woods and winds—an awful union!  
What matins like the larks, who heavenward  
climb,

And pour down lighted music from above?  
What midnight serenade so rapturous  
As the lone nightingale's, whose soul of love  
Out-gushes with her song?—Jewels and rings!  
Is not each dewy blade, and leaf, and flower,  
Hung with a pearl, which, when the sun up-  
springs,

Is dyed to aethurst and ruby?

Lighted music is one of the most exqui-  
site expressions we ever met with.—*Contem-  
plation* is also charmingly painted.

—I have often stray'd,  
At dumbest midnight, to the green-wood glade,  
And in the silence, mark'd with awe profound,  
The boogles, like curtains, hanging stilly round,  
With drowsy vapours from the earth up wreath-  
ing,

As if the grass lay fast asleep, and breathing.

There is perhaps some grandiloquence  
in the annexed comparison, but it is beau-  
tiful. Amarillis expecting her lover, watches  
the usual approach of his dog, and says—

But neither might I hear his voice, nor mark  
His white side bounding o'er the waving grass,  
Like a sail toss'd on Neptune's tumbling green.

*Spring.*

O how delightful is the jolly spring,  
When the warm blood leaps nimbly thro' the  
veins,

And with the budding forth and blossoming  
Of fields and groves, methinks the soul attains  
Fresh life and greenness, wakens in the breeze,  
Sings with the birds, and with the waving trees  
Dances in nelson.

*Nature rejoicing in the God Pan's jocund music.*  
Then Nature laughs outright; the wild flowers  
ding

Their increase up; the cattle leap for glee;  
The jocund trees their branches toss on high,  
As if they clapp'd their hands; the cloudless  
sky

Smiles on the smiling earth, and every thing  
Makes holiday and pranksome Jubilee.

*Longings of an enthusiastic spirit for knowledge.*

O Panophaean dove! be'st me to pierce  
This, only secret. Draw the curtain up  
That hides fatality, or tear it down,  
I care not which, so thou canst ease these fierce  
questionings of my spirit.—

O thou most beautiful pageant of the world,  
O glorious sun and moon, sea, earth, and sky,  
Shall I plod blindly on through life's worn  
maze,

Nor ask by whom your wonders were unfurled?  
Nay! Shall I fix on thee my dying eye,  
Nor e'er have learnt who set thee in a blaze?

Earth! shall I tread upon thee but to be  
Down trodden, and partake man's grovelling  
doom,

Earth-born, earth-swallowed,—eating,—eaten,  
—dust!

*The despair of Nympholepsy.*

The nymphs! the nymphs! O hide me from  
their fury.

They gain upon me. Hark! the hissing air  
Boils in mine ears; earth heaves beneath my  
feet,

And tries to shake me off. Spare, I conjure ye,  
O spare a madden'd wanderer. There, there!  
The sea forsakes its bed, and robs its fleet  
Waves to o'erwhelm me. Lo! the rays of the  
sun

Are angry flames, with forked tongues out-thrust  
To lap me. Hecate's coming; see,  
With her hands she combs her snakes, and every  
one

Spits out its foam at me. Here in the dust,  
Knowing, O gentle shepherds, to thee  
I make appeal. If ever thou didst love,  
Or the soft touches of compassion teach,

If thou dost reverence the powers above,  
And the dread nymphs their ministers below,  
O pour thy pity on a haunted wretch,  
Chaced by the furies,—horror-stricken,—stung  
To madness.— Show me some lair where I may  
stretch.

My fainting limbs, and lie in the dark conceal'd  
From all things and myself.

*An ethereal being's view of humanity.*

Oft as I float above this earthly ball,  
And catch the murmur of its myriad throngs,  
Although to me no sympathy belongs  
With fleeting man, a smiling tear will fall

To think upon the everlasting strife  
Of passions that embroil his little life;  
Their schemes ephemeral, the sad and blithe  
Hotly pursue, and as they smile or weep,  
Up stalks the bony monster with the scythe,

And crops the breathing harvest at a sweep.  
New generations rise to feed his blade,  
And yet, poor insect, only *thou* dost fade.  
The sun and moon look on with changeless eye,  
Age doth not bleach the blueness of the sky;  
And *thou* the winter'd earth was cheeks may  
wear,  
Spring re-appears, her wrinkled brow to smooth,  
Garlands her locks, and o'er her shoulders bare  
Throws the green mantle of eternal youth.

*Figures of natural phenomena.*

Through the azure lake yon parted  
cloud

Swims on to bleach its feathers in the moon,  
Like the swan-god, bridling to alack his proud  
And thrilling down on Leda's breast.

And now the Titan clouds their masses prop  
Into a mountain that may scale the skies;  
And, lo! the moon, soon as it sleeps at rest,  
Steals to the field of lilies on its top,

To bless her Latman shepherd, while the wind  
Blows the black ringlets from his dreaming eyes,  
That she may kiss them softly. Ah! how soon  
All is dissolved, and scattered, unconfined,

For now the clouds, in tufts of fleecy hue,  
Wander, like flocks of sheep, through fields of  
blue,

Cropping the stars for daisies, while the moon  
Sits smiling on them as a shepherdess;  
Floating upon the wings of silence down,  
A dew of light, in silver loveliness

Falls on the earth. The trees stand proudly still  
To have their portraits shadow'd on the ground  
By Dian's pencil, whose creative skill  
Doubles the landscape, copying every trace

In light and shade,—all but her own fair face,  
Which in the brook, as in the heavens, is found  
Painted in light alone.

We could multiply these delicious quotations  
to the end of our paper; but what  
we have transcribed are sufficient to show  
the power and pathos of the author, when  
his muse is liberated from the debasing  
tendencies of Cockney poetry. So delighted  
are we with the perusal of these extracts,  
that we feel we could not have stated our  
objections in the same page with our praises,  
had we not done so in setting out. It now  
only remains for us to give one example of  
the playful; and for this purpose we select  
a ballad, on a well known classical anecdote,  
sung by CEnome.

Hot was the phase  
Through the wilds of Thrace,  
When Rheaen riding the woods among,  
Saw a beautiful oak that toppling hung.

For the earth had sunk  
From the rock, and its trunk  
To the shelving bank in an agony clung.

His horse he stopp'd,  
And he upright propp'd  
The tree, and replaced the earth with care,  
When a young Hæmædrayd, as fresh as air,

Stepping out of the dark  
And yawning bark,  
Cried, "Ask a boon, and I'll grant your prayer."

As he gaz'd on her breast,  
Still hearing distress'd,  
He fondly exclaim'd, with love I burn,  
O beautiful nymph grant yours in return!

She blin'd at his boon,  
But vow'd that soon,  
The hour of his happy reward he should learn.

In his ear, while at dice,  
A bee buzz'd thrice,

'Twas a page from his bride to whisper her ear,  
But he dash'd it aside, and attempted to kill.  
When in anger and shame  
She struck him lame,  
And there he goes limping, limping still.

Of Lucy Milford, and the smaller poem,  
we have not left ourselves room to say  
much; which we the less regret, because  
we think the first rather mediocre. Among  
the latter are some pretty pieces. *Et. gr.*

*On an ancient lance, hanging in an armory.*  
Once in the breezy coppice didst thou dance,  
And nightingales amid thy foliage sang;  
Form'd by man's cruel art into a lance,  
Oft hast thou pierc'd (the while the victim  
rang

With tramp and drum, shootings and battle  
clang.)

Some foeman's heart. Pride, pomp, and circumstance  
Have left thee now, and thou dost silently  
From age to age, in deep and dusty lance,

What is thy change to ours? these gazing eyes,  
To earth reverting, may again arise  
In dust, to settle on the self-same spear;  
Dust, which some eddying, yet unloving, air  
tries

To poison thy wright, may with his hand ether,  
And with his mouldier'd eyes again replace.

Some lines written at Windsor so singularly  
exemplify the author's merits and deficiencies,  
that we are sorry our limits prevent us from  
inserting them: but in reading these, and indeed  
the whole volume, we will venture to say the  
public will enjoy, if not an unmix'd, a very great  
and genuine pleasure.

*A Memoir on the Voyage of D'Entrecasteaux,  
in search of La Pérouse.* By James  
Burney, Esq. R. N. and F. R. S. pp. 21.

This pamphlet embraces a question which  
has always excited so much interest, that we  
felt called upon to specify it (however  
briefly) for public notice. Captain Burney  
recalls to memory, that La Pérouse sailed  
from France on the 1st of August 1785, and  
that the last certain information received  
concerning him was, that he departed from  
Botany Bay on the 10th March 1788, having  
previously signified his intention to revisit  
the Friendly Islands, thence trace the coast  
of New Caledonia to the isle of Santa Cruz,  
pass between New Guinea and New Holland  
to Van Diemen's Land, and reach the isle of  
France in December. The writer then  
details the proceedings of the French Government  
in 1791, when M. D'Entrecasteaux in La  
Recherche of 600 tons, and Capt. Baudouin  
in L'Esperance of the same burden, were  
despatched to follow the track, indicated in  
Pérouse's last letter; and gain intelligence of  
the fate of the expedition. Capt. B. relates  
the minutest of the instructions given to the  
commander; but the principal feature of his  
memoir is that which relates to the inquiry  
respecting the lost voyagers. The supposition  
founded on a story related of Commodore  
Hunter, that Pérouse might have been  
wrecked on one of the Admiralty Isles, is  
discredited; and the notion that the Friendly  
Isles might have been the scene of rest to

event is also dismissed. But a new and curious hypothesis is started.

"The 19th of April (1793) they (the French ships under d'Entrecasteaux, we are told), anchored in Balade Harbour, on the North coast of New Caledonia, a place where Captain Cook had formerly anchored. Nothing relative to the purpose of their search occurred till the 4th of May. Labillardiere had been with others on an excursion into the interior of the Island. He relates, 'we reached the ship on our return, about the middle of the day. Alongside, I observed a double canoe which had two sails. The natives in her spoke the language of the Friendly Islands. They were eight in number, seven men and a woman. They told us that the Island whence they had come, was situated to the eastward, a day's sail distant from our anchorage, and that it was named *Aoueva*. They knew the use of iron, and appeared to us more intelligent than the New Caledonians. I was not a little surprised to see one of the planks of their canoe covered with a coat of varnish. It seemed to have belonged to some European vessel, and I could entertain no doubt of it when I discovered that white lead (chaux de plomb) was a principal ingredient in the composition of this varnish. This plank doubtless came from a ship of a civilized nation, which had been wrecked on their coasts. I desired these savages to recount to us what they knew on this subject: they immediately set sail to the westward, promising us to return the next day to give the account we desired; but they were not faithful to their word, and we did not see them again.'"

"Upon this, Capt. B. remarks, that the impression it is adapted to make, can be no other than that a clue was found which might have led to some discovery concerning the fate of la Pérouse; that this clue was suffered to slip from their hands; and that it was not afterwards pursued or sought after.

"Many years after Labillardiere's history of the *Voyage à la Recherche de la Pérouse* was given to the public, the journal of the commander d'Entrecasteaux, which had been regularly kept till within a few days of his death, was prepared for the press by le Sieur Rossel, who had served in the voyage as lieutenant, and was published under the patronage of the Emperor Napoleon. The account given by M. d'Entrecasteaux, of the canoe of *Aoueva*, or, as it is written in his journal, of *Hohoua*, is as follows:—

"May the 4th, in the harbour of Balade, New Caledonia.—A canoe with two sails, which appeared to us to have arrived from the offing (i. e. from sea) came alongside the *Recherche* in the afternoon. There were in it seven men, but they did not resemble the men of New Caledonia. They were, however, like them, quite naked. Their skin was darker than that of the inhabitants of Balade, and they were more robust, and taller stature. They made us understand that they came from an Island named by them *Hohoua*, and they indicated the direction in which it lay by pointing to the East or North East. We distinguished in their

speech many words of the Friendly Island language. Some inhabitants of Balade came on board whilst they were with us, and they did not exchange any communication with these strangers. I was told that these newcomers, who had arrived late, had testified a desire to pass the night on board the ship, but they had been sent away before their demand was understood. We flattered ourselves that they would return the next day, but we did not see them again." In this, there is no mention of the vanished plank of which M. Labillardiere has spoken. Possibly M. d'Entrecasteaux differed in opinion from M. Labillardiere concerning it; yet he adds, 'Their departure caused me much regret, as I had hoped to have drawn from them lights which we had not been able to obtain from the natives of New Caledonia.'

"The regret and anxiety expressed by the commander, at not having obtained more information from these people, seems to imply that some communication of more importance than what related to a further knowledge of the natives themselves, or of their language, had been expected. There is also a remarkable difference in the two narratives. That of Labillardiere relates that the *Aouevans*, on being interrogated about the painted plank, immediately sailed away: and M. d'Entrecasteaux represents them as having been desirous to remain all night on board the ship, and as having been sent away. On these points, the later publication might have afforded some explanation.

"As it was the intention of M. de la Pérouse, when he left Botany Bay, to go first to the Friendly Islands, and it appears that he did not go there, the most probable conjecture, were it not for the circumstance of the *Aoueva* canoe, would be, that some disastrous event prevented him from fulfilling that intention. But badling and unexpected winds might have disappointed him of reaching the Friendly Islands, and have occasioned him to pass on without touching at them.

"In the present state of the South Sea Islands, and of European navigation in the South Sea, more effective enquiry can be made than was possible in M. d'Entrecasteaux's time, and with much greater facility. Numerous European and American seamen have quitted their ships at different Islands in the South Sea, and resided among the inhabitants such a length of time that they may be said to be naturalized; many of whom are probably as well acquainted with the language spoken at the Island on which they live as the natives themselves. Native Islanders also hire themselves as seamen, and make voyages in European ships. Interpreters of each description could doubtless be engaged, and ships are frequently departing from New South Wales, bound for the China Seas, which afford opportunities with little inconvenience of sending to New Caledonia.

"If a ship should go expressly to make this enquiry, it would be desirable that she should be provided with a New Zealander, a Friendly Islander, a Society Islander, and two or three Europeans, qualified in the

manner above mentioned. Of the New Caledonians, the situation of the Island *Aoueva* might be learnt; and by enquiries made both of the New Caledonians and of the *Aouevans*, would most probably be ascertained, without danger of misapprehension, whether the ships of la Pérouse had been seen at their Island, or at any Island in their neighbourhood, and all the information respecting them which they had to communicate, be obtained.

"Without being very sanguine as to the result, it would be satisfactory to have this matter cleared up, and such examination and enquiry is due to la Pérouse and his companions, or to their memory."

"We have nothing to add to this quotation, which amply explains the writer's views, and re-opens a most interesting inquiry.

#### LECCOCK'S NOTES ON BRAZIL.

[Concluding Notice.]

Having already represented the character of this work (a character which we trust will recommend it to those who are curious for information upon its subject, and have leisure to plod through its miscellaneous and copious contents); and having made frequent extracts to display its fashion and qualities, the rapid influx of literary novelties prevents us from doing more than winding up our review with only two short selections. The following draws an uncommon picture of South American agriculture.

"The reader has regarded with wonder, perhaps with incredulity, the account before given of the size of the farm of Pelotas; and, indeed, the reported extent of farms in this part of the American continent can scarcely be mentioned with boldness, by one who has himself little doubt of the truth of the accounts. The smallest are stated at four square leagues, or more than twenty thousand acres; the largest are said to reach to a hundred square leagues, or near six hundred thousand acres. To each three square leagues, are allotted four or five thousand head of cattle, six men, and a hundred horses; though, according to circumstances, such as the distance from navigable waters, or from church, there must be a variety in the number of oxen kept for the business of a farm. The proportion of horses will appear a very large one; but it is to be remembered that they cost nothing in keeping, as they are turned out on the plains; that no one about the farm, not even a slave, ever goes the shortest distance on foot; and that each manager will change his horse two or three times in a day. About a hundred cows are allowed for the supply of milk, butter, cheese, and veal, to a farm of the average size. Hogs are usually found near the houses, but little care is taken of them; they wander about, root up the ground, devour reptiles, and make a good part of their subsistence on the waste parts of the cattle slaughtered. There are few sheep, and they are remarkably light and ill made, with a short ordinary wool; which, however, might easily be improved. This wool is, at present, used partly unstripped from the skins, as saddle-covers and

the like, partly for the stuffing of beds and mattresses. The country is so thinly peopled, its inhabitants have so little liking to mutton, and the wild dogs and other beasts and birds of prey are so numerous, that there can be little inducement to increase the flocks.

"In every farm there is at least one enclosed place, called the *Rodeio*, generally on the highest spot; here the cattle are occasionally collected, examined, marked, and treated as circumstances may require. So accustomed are they, particularly the horses, to this practice, that when the servants of the farm ride along, swinging their *Laços* or their hats, and loudly pronouncing the word *Rodeio*, they all walk slowly to the spot. In a country so little enlivened by variety, this assemblage forms one of its most rural and pleasant scenes."

Of the present, that is to say, the improving state of Brazil, we find some interesting particulars. The King was rather favourable to the liberty of the press, but was prevented from following his inclination.

"The licensed press, however, has produced some useful works besides these, which relate to military affairs. Among them, we reckon as the most useful, the *Thesouro dos Meunios*, which treats of "Morals, Virtue, and good Manners." It was dedicated, very properly, to Don Miguel, the King's second son, for no boy can require such instructions more than he does; his education has been most limited and unfortunate. A book entitled *Lectures on Philosophy*, contains too much of the dogmas of Aristotle and the dark ages to evince that the author is either enlightened or judicious. We have also the *History of Extravagant Illusions and Supernatural Influence*; the *Commercial Laws of Brazil*; several useful works on Commerce and Navigation, particularly a *Nautical Almanack*, calculated for the meridian of Rio, a work badly executed, but followed by *Tables of the Sun's Declination*, of *Latitudes*, and *Logarithms*; one or two works on Geography, and a *Treatise on the Diseases of Negroes*.

"A private printing press was established at the close of 1816; philosophical lectures were read and attended: the cabinet which formerly belonged to the celebrated Werner was arranged and studied; mineral waters, found in Minas Geraes and other places, had been analysed; and Brazilians boasted of a native discovery, in the composition of gunpowder, but I apprehend without reason, for it consists simply in mixing a quantity of fresh saw-dust with the grains; a patent had been granted for making bricks by machinery, and another for the navigation of the bay by a steam boat; a company had been formed even in Cuyaba, under royal patronage, for improvements in the art of mining.

"The Arabian Camel had been introduced, and two small goats from India, which I imagine to be Cashmerian; if they succeed, both animals will prove useful to the country.

"In 1818, at a sale of books, English works went off well, as did some Latin ones; but few, I believe, fell into Brazilian hands.

French books are in demand; but it was impossible, by any means, to sell the Glasgow edition of *Homer's Iliad*, in Greek; the *Septuagint* and *New Testament* in the same language, *Hederic's* nor even *Schrevelius's* *Lexicons*; nor did a *Hebrew Psalter*, with a *Latin Translation*, find a customer.

"With the sciences, the arts, both mechanic and those which are commonly denominated fine ones, prospered in a high degree; and we had not only blacksmiths, carpenters, and bricklayers, but poets and painters in abundance.

"The state of fashion and taste was displayed by the superior show and decoration of retail shops; and by the puffing advertisements which were published in a style suited to the French capital. In 1816, a *Hair-Dresser* announced himself, and solicited patronage from the circumstance of having had the honour to be employed by *Donna Carlotta of Brazil*, the *Princess of Wales*, and the *Duchess of Angouleme*."

In conclusion, we have to repeat, that Mr. Luccock's work is, though not well digested, a very curious repository of Brazilian intelligence.

#### BELZONI ON NUBIA AND EGYPT.

##### Second Journey.

The second journey of this enterprising traveller is still more interesting than the first, of which we have rendered an account: it occupies about 140 pages of his work. Accompanied by Mr. Beechey, a son of the celebrated artist (who was broiling under an African sun, while his brother froze within the Arctic circle), Belzoni left Bualak on the 20th February, 1817, and once more proceeded up the Nile. At Meimond, the boats stopped to witness an Arabian festival; and the following notice of the native dances possesses an additional claim to notice, from the vehement heat with which that subject has been disputed on a recent memorable trial.

"The performers consisted of about thirty men, all in a row, clapping their hands in concert, so as to form a kind of accompaniment to their song, which consisted of three or four words; and with one foot before the other keeping a sort of perpetual motion, but without changing their positions. Before the men were two women with daggers in their hands, also in continual action, running toward the men, and then returning from them with an extraordinary motion, brandishing their daggers, and waving their garments. In this they persevered for such a length of time, that I wondered how they could support the exertion. This is a sort of Bedouen dance, and is the most decent of all that I ever saw in Egypt;—but no sooner was it ended, than, in order I suppose to please us, they immediately began another, in the fashion of the country, which fully compensated for the extraordinary modesty of the first: but we returned to our boat more disgusted than pleased with it.

After this, the author gives an equally curious description of the maritime power (if we may so term it,) on the river.

"For three days," he says, "we had a strong southerly wind, so that we advanced but a few miles, and did not arrive at Minia till the 5th of March. It was necessary for us to land there, to see Hamet Bey, who has the command over all the boats on the river. He styles himself admiral of the Nile, and thinks himself as great as any British admiral on the sea. One day at a christian party in Cairo, the discourse happened to fall upon Sir Sydney Smith: 'Ah!' said Hamet Bey, 'Sir Sydney Smith is a very clever man, and holds the same rank as myself.' From this great commander we had to maintain a protection for our Reis, to secure him from having his boat pressed while we employed it. We found him sitting on a wooden bench, attended by two or three of his sailors. He complied with our request, and gave a hint for a bottle of rum. We sent him two, and he made a feast in high glee with them."

He is not the only naval commander in the world who likes a good glass of grog! Early in March, Belzoni found that some French agents were a-head, on their way to Thebes, to collect antiquities for Mr. Drouett; upon which he landed and made a haste, travelling on camels and asses, to reach that site of ancient ruins before them. In this he succeeded; but their intrigues, their misrepresentations, and their falsehoods, prevailed with Deftard Bey, the ruler of Upper Egypt; and in the end, the English were prohibited from continuing their researches; and one of the sheiks, supposed to be friendly to them, was cruelly bastinadoed. We hear, perhaps, too much of this discreditable contest; but if the facts which we shall hereafter notice, are founded in truth, it must be owned, that not only M. M. Jaques and Calud behaved like poultry fellows, but that Count de Forbin himself, the director of the French Museum, acted a most disgraceful, unjust, and contemptible part. In spite of all obstacles and squabbles, however, (the details of which are rather tedious,) Belzoni driven from Thebes, was enabled to carry on his operations at Gournou, of which he draws a remarkable picture.

"The people of Gournou are superior to any other Arabs in cunning and deceit, and the most independent of any in Egypt. They boast of being the last that the French had been able to subdue, and when subdued, they compelled them to pay the men whatever was asked for their labour; a fact which is corroborated by Baron Denon himself. They never would submit to any one, either the Maniakes or the Bashaw. They have undergone the most severe punishments, and been hunted like wild beasts, by every successive government of Egypt. Their situations and hiding-places were almost impenetrable. Gournou is a tract of rocks, about two miles in length, at the foot of the Libyan mountains, on the west of Thebes, and on the burial-place of the great city of a hundred gates. Every part of these rocks is cut out by art, in the form of large and small chambers, each of which has its separate entrance, and, though they are very close to each other, it is seldom that there is any interior com-

unification from one to another. I can truly say, it is impossible to give any description sufficient to convey the smallest idea of those subterranean abodes, and their inhabitants. There are no sepulchres in any part of the world like them; there are no excavations, or mines, that can be compared to these truly astonishing places; and no exact description can be given of their interior, owing to the difficulty of visiting these recesses. The inconvenience of entering into them is such, that it is not every one who can support the exertion.

"A traveller is generally satisfied when he has seen the large hall, the gallery, the staircase, and as far as he can conveniently go: besides, he is taken up with the strange horrors he observes cut in various places, and painted on each side of the walls; so that then he comes to a narrow and difficult passage, or to have to descend to the bottom of a well or cavity, he declines taking such trouble, naturally supposing that he cannot see in these abysses any thing so magnificent as what he sees above, and consequently ceasing it useless to proceed any farther. If some of these tombs many persons could at with stand the suffocating air, which often causes fainting. A vast quantity of dust, so fine that it enters into the throat and nostrils, and chokes the nose and mouth to such a degree, that it requires great power of lungs to resist it and the strong effluvia of the mummies. This is not all; the entry or passage where the bodies are, is roughly cut in the rocks, and the falling of the sand from the upper part or ceiling of the passage causes it to be nearly filled up. In some places there is not more than a vacancy of a foot high, which you must contrive to pass through in a creeping posture like a snail, on pointed or keen stones, that cut like glass. After getting through these passages, some of them so or three hundred yards long, you generally find a more commodious place, perhaps high enough to sit. But what a place of rest! surrounded by bodies, by heaps of mummies in all directions; which, previous to my being accustomed to the sight, impressed me with horror. The blackness of the wall, the faint light given by the candles or torches for want of air, the different objects that surrounded me, seeming to converse with each other, and the Arabs with the candles or torches in their hands, naked and covered with dust, themselves resembling living mummies, absolutely formed a scene that cannot be described. In such a situation I found myself several times, and often returned exhausted and fainting, till at last I became inured to it, and indifferent to what I suffered, except from the dust, which never failed to choke my throat and nose; and though, fortunately, am destitute of the sense of smelling, I could taste that the mummies were rather unpleasant to swallow. After the exertion of entering into such a place, through a passage of fifty, a hundred, three hundred, or perhaps six hundred yards, nearly overcome, I sought a resting-place, found one, and con- veyed to sit; but when my weight bore on the body of an Egyptian; it crushed it like a hard-box. I naturally had recourse to

my hands to sustain my weight, but they found no better support; so that I sank altogether among the broken mummies, with a crash of bones, rags, and wooden cases, which raised such a dust as kept me motionless for a quarter of an hour, waiting till it subsided again. I could not remove from the place, however, without increasing it, and every step I took I crushed a mummy in some part or other. Once I was conducted from such a place to another resembling it, through a passage of about twenty feet in length, and no wider than that a body could be forced through. It was choked with mummies, and I could not pass without putting my face in contact with that of some decayed Egyptian; but as the passage inclined downwards, my own weight helped me on; however, I could not avoid being covered with bones, legs, arms, and heads rolling from above. Thus I proceeded from one cave to another, all full of mummies piled up in various ways, some standing, some lying, and some on their heads. The purpose of my researches was to rob the Egyptians of their papyri; of which I found a few hidden in their breasts, under their arms, in the space above the knees, or on the legs, and covered by the numerous folds of cloth that envelop the mummy. The people of Gournou, who make a trade of antiquities of this sort, are very jealous of strangers, and keep them as secret as possible, deceiving travellers by pretending, that they have arrived at the end of the pits, when they are scarcely at the entrance."

"The people of Gournou live in the entrance of such caves as have already been opened, and, by making partitions with earthen walls, they form habitations for themselves, as well as for their cows, camels, buffaloes, sheep, goats, dogs, &c. I do not know whether it is because they are so few in number, that the government takes so little notice of what they do; but it is certain, that they are the most unruly people in Egypt. At various times many of them have been destroyed, so that they are reduced from three thousand, the number they formerly reckoned, to three hundred, which form the population of the present day."

They are most cunning and rascally cheats, as the author illustrates, by relating the manner in which he became possessed of two brazen vessels apparently sacred, and sonorous like Corinthian brass, of the most perfect Egyptian antiquity.

Belzoni also contrived to make excavations at Carnak; where, he says,

"I found two small sitting figures of red granite, nearly two feet high, and a stone irregularly shaped, but flat and smooth on the surfaces. It is divided by lines into many little squares of half an inch, in each of which is a hieroglyphic, but all different from each other. This piece, in my opinion, might be of much service to Dr. Young, in his undertaking of the discovery of the alphabet of the Egyptians, particularly in the advanced state at which he has at present arrived. Two other articles were found in this excavation, of which one is a tombstone, and the other an iron sickle, that I think worthy

the attention of the antiquary. It is certain, that the burial-places of the Egyptians were on the west side of the Nile, for not a single place is to be found on the eastern side to indicate there having ever been a burial-ground there: yet among these sphinxes was a tombstone similar to those which are found in the tombs on the other side of the Nile, and probably, therefore, made to be taken to the tomb of some family on the west. But the iron sickle to which I would call the attention, was found under the feet of one of the sphinxes on its removal. I was present; one of the men took it up and gave it me. It was broken into three pieces, and so decayed, that the rust had eaten even to the centre. It was rather thicker than the sickles of the present time, but exactly of the common shape and size of ours. It is now in the possession of Mr. Salt."

We are not aware of any portion of these antiquities dug out of the earth where they have remained more than 2000 years, so well calculated to excite strong emotions, as the common tools and garments of humble men. Through the condescension of Lord Belmore, we have passed some time among the extraordinary and invaluable treasures which he has brought from the banks of the Nile; and our minds have been far more strongly affected by such remains, than by all the splendid relics which littered the tombs of monarchs. The well worn wooden mallet of a mason, precisely resembling those used in Britain at this day, but which had, perhaps, hewed stones for the pyramid of Cheops! the adze of a carpenter, also similar to those of our times, as perfect as when the death of its owner put an end to its employment! the shoes of undistinguished beings, since whose mortal career was closed, seventy or eighty generations of men have passed away, but which are made right and left according to our latest fashions! the hair of beauty, not yet unravelled from its nicest plaits, but hanging, hardly soiled, in long ringlets, though it had lain twenty centuries in the dust! These were the objects in the noble Earl's collection, which most deeply excited our feelings, and induced sensations of wonder mingled with delightful melancholy.

(To be continued.)

#### CUSTOMS, &c. OF AMERICAN INDIANS. [Medicine; Superstitions.]

As the observations in Mr. Heckewelder's memoir are the fruits of a more intimate acquaintance with the American tribes than any with which we are acquainted, and as the work is not to be had by English readers, we shall continue our selections from it for yet a few Numbers. The practice of medicine, it may well be supposed, is in a rude state among so rude a people. Some of their remedies are however as effectual as they are strange. Mr. H. says,

"In fevers the Indians usually administer emetics which are made up and compounded in various ways. I saw an emetic once given to a man who had poisoned himself with the root of the May Apple. It consisted of a

Podophyllum peltatum.

piece of racoon skin burned with the hair on and finely powdered, pounded dry beans and gunpowder. These three ingredients were mixed with water and poured down the patient's throat. This brought on a severe vomiting, the poisonous root was entirely discharged and the man cured.

The following description of the SWEAT OVEN and its uses, is, we think, very curious. "In other complaints, particularly in those which proceed from rheumatic affections, bleeding and sweating are always the first remedies applied. The sweat oven is the first thing that an Indian has recourse to when he feels the least indisposed; it is the place to which the wearied traveller, hunter, or warrior looks for relief from the fatigues he has endured, the cold he has caught, or the restoration of his lost appetite.

"This oven is made of different sizes, so as to accommodate from two to six persons at a time, or according to the number of men in the village, so that they may be all successively served. It is generally built on a bank or slope, one half of it within and the other above ground. It is well covered on the top with split plank and earth, and has a door in front, where the ground is level to go or rather creep in. Here, on the outside, stones, generally of about the size of a large turnip, are heated by one or more men appointed each day for that purpose. While the oven is heating, decoctions from roots or plants are prepared either by the person himself who intends to sweat, or by one of the men of the village, who boils a large kettleful for the general use, so that when the public crier going his rounds calls out *Pimook!* 'go to sweat!' every one brings his small kettle, which is filled for him with the potion, which at the same time serves him as a medicine, promotes a profuse perspiration, and quenches his thirst. As soon as a sufficient number have come to the oven, a number of the hot stones are rolled into the middle of it, and the sweaters go in, seating themselves or rather squatting round those stones, and there they remain until the sweat ceases to flow; then they come out, throwing a blanket or two about them that they may not catch cold; in the mean while, fresh heated stones are thrown in for those who follow them. While they are in the oven, water is now and then poured on the hot stones to produce a steam, which they say, increases heat, and gives suppleness to their limbs and joints. In rheumatic complaints, the steam is produced by a decoction of boiled roots, and the patient during the operation is well wrapped up in blankets, to keep the cold air from him, and promote perspiration at the same time.

"Those sweat ovens are generally at some distance from an Indian village, where wood and water are always at hand. The best order is preserved at those places. The women have their separate oven in a different direction from that of the men, and subjected to the same rules. The men generally sweat themselves once and sometimes twice a week; the women have no fixed day for this exercise, nor do they use it as often as the men." Even the most skillful leeches participate

in a whimsical popular notion respecting medicine. They hold it to be of the utmost importance that they should draw "water up or down the current of a stream, as it is to be respectively employed as a vehicle for an emetic or a cathartic. This singular idea prevails generally among the Indians of all classes. They think that as the one remedy is to work upwards and the other downwards, care should be taken in the preparation to follow the course of nature, so that no confusion should take place in the stomach or bowels of the patient!"

We are sorry to say that the quacks or jugglers have more practice than those of the regular faculty. This arises from the excessive superstition of the natives, of which the following are examples.

"I was once acquainted with a white man, a shrewd and correct observer, who had lived long among the Indians, and being himself related to an Indian family, had the best opportunities of obtaining accurate information on this subject. He told me that he had found the means of getting into the confidence of one of their most noted sorcerers, who had frankly confessed to him, that his secret consisted in exciting fear and suspicion, and creating in the multitude a strong belief in his magical powers. 'For,' said he, 'such is the credulity of many, that if I only pick a little wool from my blanket, and roll it between my fingers into a small round ball, not larger than a bean, I am by that alone believed to be deeply skilled in the magic art, and it is immediately supposed that I am preparing the deadly substance with which I mean to strike some person or other, although I hardly know myself at the time what my fingers are doing; and if, at that moment, I happen to cast my eyes on a particular man, or even throw a side glance at him, it is enough to make him consider himself as the intended victim; he is from that instant effectually struck, and if he is not possessed of great fortitude, so as to be able to repel the thought, and divert his mind from it, or to persuade himself that it is nothing but the work of a disturbed imagination, he will sink under the terror thus created, and at last perish a victim, not indeed, to witchcraft, but to his own credulity and folly.'

"But men of such strong minds are not often to be found; so deeply rooted is the belief of the Indians in those fancied supernatural powers. It is vain to endeavour to convince them by argument that they are entirely founded in delusion and have no real existence. The attempt has been frequently made by sensible white men, but always without success. The following anecdote will shew how little hope there is of ever bringing them to a more rational way of thinking.

"Sometime about the year 1776, a Quaker trader of the name of John Anderson, who among the Indians was called the *honest Quaker trader*, after vainly endeavouring to convince those people by argument that there was no such thing as witchcraft, took the bold, and I might say the rash, resolution to put their sorcerers to the test, and

defy the utmost exertions of their pretended supernatural powers. He desired that two of those magicians might be brought successively before him on different days, who should be at liberty to try their art on his person, and do him all the harm that they could by magical means, in the presence of the chiefs and principal men of the village. The Indians tried at first to dissuade him from so dangerous an experiment; but he persisted, and at last they acceded to his demand; the conjurer was brought to him, who professed himself fully competent to the task for which he was called, but he could not be persuaded to make the attempt. He declared that Anderson was so good and so honest a man, so much his friend and the friend of all the Indians, that he could not think of doing him an injury. He never practised his art but on bad men and on those who had injured him, the great Mannito forbid that he should use it for such a wicked purpose as that for which he was now called upon.

"The Indians found this excuse perfectly good, and retired more convinced than ever of the abilities of their conjurer, whom they now revered for his conscientious scruples.

"The one who was brought on the next day was of a different stamp. He was an arch sorcerer, whose fame was extended far and wide, and was much dreaded by the Indians, not only on account of his great powers, but of the wicked disposition of his mind. Every effort was made to dissuade Mr. Anderson from exposing himself to what was considered as certain destruction; but he stood firm to his purpose, and only stipulated that the magician should sit at the distance of about twelve feet from him, that he should not be armed with any weapon, nor carry any poison or any thing else of a known destructive nature, and that he should not even rise from his seat, nor advance towards him during the operation. All this was agreed to, the conjurer boasting that he could effect his purpose even at the distance of one hundred miles. The promised reward was brought and placed in full view, and both parties now prepared for the experiment.

"The spectators being all assembled, the sorcerer took his seat, arrayed in the most frightful manner that he could devise. Anderson stood firm and composed before him at the stipulated distance. All were silent and attentive while the wizzard began his terrible operation. He began with working with his fingers on his blanket, plucking now and then a little wool and breathing on it, then rolling it together in small rolls of the size of a bean, and went through all the antic tricks to which the power of bewitching is generally ascribed. But all this had no effect. Anderson remained cool and composed, now and then calling to his antagonist not to be sparing of his exertions. The conjurer now began to make the most horrid gesticulations, and used all the means in his power to frighten the honest quaker, who, aware of his purpose, still remain unmoved. At last, while the eyes of all the spectators were fixed on this brave man, to observe the effects of the sorcerer's craft upon him, this

terrible conjurer, finding that all his efforts were vain, found himself obliged to give up the point, and alleged for his excuse 'that the Americans eat too much salt provisions; that salt had a repulsive effect, which made the powerful invisible substance that he employed recoil upon him; that the Indians, who eat but little salt, had often felt the effects of this substance, but that the great quantity of it which the white men used effectually protected them against it.'

"The imposition in this instance was perfectly clear and visible, and nothing was so easy as to see through this sorcerer's miserable pretence, and be convinced that his boasted art was entirely a deception; but it was not so with the Indians, who firmly believed that the salt which the Americans used was the only cause of his failure in this instance, and that if it had not been for the salted meat which Mr. Anderson fed upon, he would have fallen a victim as well as others to the incantations of this impostor."

#### EARLY RUSSIAN HISTORY.

(From Count T. Golowkin's *inedited Letter*.)

The impulse of grandeur and importance which the long and prosperous reign of St. Wladimir had given to his government, withstood for a time the fatal effects of his testament. Notwithstanding the loss of eleven great appanages with which they were obliged to part, the sovereigns of Kieff held for 120 years, with a firm and skilful hand, the chains which attached them to the throne; and perhaps, this power and this splendour would have been perpetuated, if among so many states, separated from each other, the grand principality had not been the most exposed of all to usurpations and subdivisions. I have extracted from the chronicles and archives, a picture, which demonstrates the madness of the system pursued. But the military government founded by Rurick, continued only till the death of Mstislaff the Great, and various causes contributed to its destruction.

The first was indisputably those partitions, which were renewed at the death of every prince, and which it seemed impossible to abolish, as they had acquired by custom the force of law. Continual misfortunes, and dangers constantly increasing, could not fix any bounds to them. Vsevolod III. (1213) and Constantine I. (1218) who may be supposed to have been equally alarmed by the past and the future, shewed how far this deplorable infatuation was carried. In reading their testamentary dispositions, it seems that the only hope, the only consolation they had left, was to see all finish with themselves. The grand Princes had not observed, that in the continual subdivisions, there were two results directly contrary to each other; namely, that in proportion as they were favourable to them in the appanages which they weakened, they were destructive of the authority which it was so important to preserve in the Grand Principality. We cannot help asking, why Iaroslaff and Mstislaff, who were so sensible of their greatness and so skilful in making use of it, especially the first, who had succeeded in re-joining the whole inheritance of

his ancestors, did not establish it as a fundamental law, that the Grand Principality should belong to one only branch of the house of Rurick; that it should be indivisible; and that on the contrary, each appanage should, in case of decease, be always divided into as many parts as there were male heirs.

The second cause of destruction was, the example set by the same Iaroslaff of changing the appanages. Desiring in 1020 to give an advantage to his brother Mstislaff, he gave him, instead of the principalities of Monroma and Tschernigoff, which he possessed, that of Zimoutaracan, which lying on the frontiers and near the seas on the south, was better calculated to favor his ambitious views. From that time, every prince discontented with his lot, perceiving that there was a means of ameliorating it, thought he had a right to ask it; or only waited for an opportunity to demand it.

These changes of princes and of principalities became more frequent, as the Grand Principality, not being attached to a single branch, and belonging by right to the eldest of the whole race, and in fact, to the bravest or the most powerful, these changes became inevitable on every new reign. Among the appanaged princes, there were soon found some, who attempted to rival the head of the state; and as in the pursuits of ambition, the worst that can happen is, not to succeed, each sought to strengthen himself by the aid of the neighbouring people. Hence, the invasions of the Khorazes, the Polovtzy, the Poles, the Teutonic knights; hence, the dreadful yoke of the Mongols and the Lithuanians.

The most powerful of the appanaged Princes then declared themselves the hereditary possessors of the appanages they usurped; and the weakest, always protected by the grand princes, had a permanent pretext to dispute the possession with them. The certainty or the hope of obtaining justice sooner or later, completed the misfortunes of the people. Every one ruined his appanage, in order to obtain the means of purchasing or conquering another; and lastly, as the vain title of Grand Prince, was the secret object of all these ambitious princes, every thing was overthrown to arrive more speedily to an unstable throne. The time when it became necessary to transfer the Grand Principality, was not long delayed. Kieff, too much injured by foreign invasions, too much weakened by the loss of the appanages which had been successively detached from it, could no longer serve as its seat. Youry I. Dolgorouky, established himself at Wladimir, which belonged to him. Shortly after, Moscow became the seat of the Grand Principality. Soon there were two Grand Princes at the same time, or even more, according to the power of each of those who desired to be so; or to the interest of the Mongols who were masters of the greatest part of Russia. At the time of these two great Princes, Rurick II. of Kieff, and St. Youry II. of Wladimir, a noble example was seen of the harmony which love of their country may produce between

two sovereigns, who are both men of honorable principles; but this requires a union of virtues so rare, that Russia enjoyed it but once, and for a moment.

It would however be an erroneous notion, to believe that the power and the energy, the sources and example of which had been bequeathed by the founders, were entirely lost. At various periods, the fittest means were adopted to restore what time and accumulated faults had deteriorated. The reign of Iaroslaff I., so remarkable on many accounts, is particularly so from the successful efforts made by that prince to restore due vigour to the sovereign authority. This noble ambition would probably have been crowned with success, had he not been so eager to act a part in the north; an eagerness, which perhaps originated only in the desire to show the fortunes of the children of Rurick; but which made him neglect the affairs of the south, and afterwards gave the Swedes opportunities to counteract the interests of Russia.

(To be continued.)

#### ARTS AND SCIENCES.

##### NEW ELECTRO-MAGNETIC EXPERIMENTS.— BY PROFESSOR J. C. ØRSTED.

(Second Communication.)

Since the publication of my first experiments on the magnetic action of the galvanic apparatus, I have prosecuted my researches on this subject as far as my numerous avocations have allowed me.

The electro-magnetic effects do not appear to depend upon the intensity of the electricity, but only on its quantity. The discharge of a powerful electrical battery, transmitted by a metallic wire, imparts no motion to the magnetic needle. An uninterrupted series of electric sparks acts upon the needle by the usual electrical attractions and repulsions; but as far as can be ascertained, the sparks do not produce any electro-magnetic effect. A galvanic pile, composed of a hundred plates, (*disques*) of two square inches of each metal, and of paper moistened with salt water, by way of a fluid conductor, is likewise without any sensible effect on the needle. On the other hand, this effect is obtained by a single galvanic arc, (*arc galvanique*) of zinc and copper, which has for its fluid conductor a liquor of a great conducting power; for example, a compound of sulphuric acid, as much of nitric acid, and 60 parts of water. The water may even be doubled without much diminishing the effect. If the surfaces of the two metals are small, the effect is the same; but it increases in proportion as the surfaces are augmented. A plate (*lame*) of zinc, of 6 square inches, plunged in a box, which contains the liquid conductor, of which I have spoken, produces a considerable effect. But a similar system, of which the plate of zinc is 100 square inches, acts upon the magnetic needle with such force, that the effect is very sensible at the distance of three feet, even when the needle is not very moveable. I have not found a greater effect

from a galvanic apparatus, composed of 40 similar parts; and its influence even appeared to me less powerful. If this observation, which I have not confirmed by other experiments, be just, I should be inclined to believe that the small diminution of the conducting power produced by the augmentation of the elements of the apparatus, lessens its electro-magnetic effect.

To compare the effect of a single galvanic arc, with that of an apparatus composed of several arcs, or elements, we must make one reflection.—Suppose that the annexed figure represents a galvanic arc of a piece of zinc *Z*, of one of copper *C*, of a metal wire *ab*, and of a liquid conductor *l*. The zinc always communicates a part of its positive electricity to the water, as the copper gives it part of its negative electricity, which would produce an accumulation of negative electricity in the upper part of the zinc, and of positive electricity in the upper part of the copper, if the communication by *ab* did not restore the equilibrium, by affording an easy passage to the negative electricity from *Z* to *C*, and of the positive, free electricity, from *C* to *Z*. We see then that the wire *ab* receives the negative electricity of the zinc, and the positive of the copper; whereas, a wire which makes a communication between the two poles of a compound pile, or other compound galvanic apparatus, receives the positive electricity of the zinc pole, and the negative of the copper pole.

By paying attention to this difference, we may, with a single galvanic arc, arranged as I have described it, repeat all the experiments which I had at first made with a compound galvanic apparatus. The use of a single galvanic arc is, of itself, a great advantage, as it allows of a repetition of the experiments, with small preparation and expense; but it gives another advantage, which is more considerable; namely, that a galvanic arc may be arranged strong enough for the electro-magnetic experiments, and yet sufficiently light to be suspended to their wire; so that this small apparatus may easily move round the prolonged axis of the wire. Thus we may examine the action of a magnet on the galvanic arc. As a body cannot put in motion another body without being moved in its turn, when it possesses the necessary mobility, it was easy to foresee that the galvanic arc might be moved by the magnet.

The author then proceeds to state, that he made various contrivances to arrange the simple galvanic apparatus, to examine the motion communicated to it by the magnet.

He describes some of them, which do not seem intelligible without the aid of figures. He adds, "I have not yet found means to construct a galvanic apparatus sufficiently free to direct itself spontaneously towards the poles of the earth. The apparatus for such an experiment ought to be excessively invariable."

## LITERATURE & LEARNED SOCIETIES.

### ROYAL ACADEMY.

On the 10th, the anniversary of this Foundation, the officers of the last year were re-elected, and silver medals distributed as prizes to Mr. Watts, for the best copy of an *Ostade*, in the school of painting; to Mr. Sharp, for the second best, a copy from the infant *Bacchus* of Poussin; to Mr. A. Norton, for the best drawing from the living model; to Mr. Pitts, for the best model from the same; to Mr. Wood, for the best drawing from an antique figure, one of the dying sons of Niobe; to Mr. R. Williams, for the best model from the same; and to Mr. George Allen, for the best architectural drawing, the plan and elevation of Surgeons College, Lincoln's Inn Square.

Sir T. Lawrence presided. We hear nothing of the academy's going out of the circumscribed bounds to which it has too long limited its operations for the advancement of art.

## ORIGINAL POETRY.

### To Poetry.

I love thee, spirit of sweet poetry!  
And, with a deep delight that few have known,  
Bend towards thee in my soul's obedience,  
And fain would court and gain thee for my own;  
Yet do I feel thy perilous influence.  
Sweet spirit, well I know thy lineage high,  
And whence are drawn the currents of thy song,  
And where they stream along  
Through the sad shores of Italy,  
Old Greece, or Avon's pleasant pastures near  
Whence Shakespeare's fancy ran and runneth clear

Toward the far seas of immortality.

Not fabled was the story of thy birth,  
As told by poets in the elder time,  
(Though scorned, alas! in these degenerate days,  
And thy green laurel deemed of little worth).  
Oh! then bear me unto thy sunny clime,  
Where few, so few, have been allowed to gaze;  
So may I bask in those eternal rays,  
That seldom yet have visited this earth,  
And with some power celebrate thy praise.

I love thee, sweetest spirit! and I oft  
Have wandered with thee, a companion rude,  
And seldom seen, and never borne aloft

\* Sir H. Davy has allowed the public to have a glimpse at his experiments on the magnetizing influence of galvanism. The results stated in the newspapers are, that the galvanic fluid properly directed, communicates magnetic properties to steel bars. The bars must not be placed in the direction of the magnetic axis, but parallel to the magnetic equator—the west end then becomes the north pole, and the east end the south pole of the new magnet. This effect may be produced at 10 or 12 inches distance from the galvanic current.

Amidst the regions where the poets stray:  
Yet have I bent before thee in my cell,  
And called on thee in solitude,  
And through the varying seasons (chief by night)  
Have felt and lov'd thy shadowy presence well;  
And owned with what a power thou wast endued  
To change, and ah! to beautify  
Whatever wound round object met thy sight;  
And I, with thee, have seen the lightnings play,  
(Touched by thy hand, terrifically bright),  
And seen the young sun tint the skies with grey,  
And marked the painted heavens at evening, grey,  
Or when they, with their thousand eyes of light,  
Look beautiful upon the world below.  
Half of this pleasure to thy help I owe.

It is to thee, sweet spirit! man should bow,  
(All self-abandoned in his love),  
And worship the bright wreath upon thy brow,  
As in those days of past mythology,  
When, on the Olympus hill, thy father Jove  
Sat in his might, and flung his bolts afar;  
(Now fixed amongst the skies a humble star),  
Whilst thou the while, didst haunt the sacred  
spring,

And from prophane touch guard the sparkling  
fount,  
And mark Apollo's laurel blossoming,  
Or roam those woods (crowning the Fieschi  
mount)

That bound the sun-bright plains of Thessaly:  
It is to thee, sweet spirit! men should bow,  
For much to thee they owe:  
To thee man oweth what is bright and fair—  
That he can joy in sights this world above,  
(The heavens—the stars that light the upper  
air)

And thus escape life's mere reality.  
Say how that Avon's child first carried thy love,  
And how thy blind and mighty votary,  
And how they did secure through life thy care:  
For I have fed upon the flowers  
That spring so fresh on Shakespeare's page,  
And, from my tenderest age  
Till now, have passed with him delighted hours:  
And with him (Fancy's high fantastic son)  
Have learned to commune with the visible soul;  
And ah! through many a soft and summer night  
(What time the fair moon lends her clearest  
light)

Have roamed alone, and dwelt in silence on  
Old Milton's matchless tale of Paradise.  
September 1819.

## SKETCHES OF SOCIETY.

We are almost sorry for having given publicity to the letters of our pandemonian friend Satan, as their insertion has had the effect of filling our letter-box with communications under the signatures of Diabolus, Lucifer, Belzebub, Asmodeus, and other names of infernal import, in such quantity, that we are disposed to believe the number of wicked spirits at present loose in this country has been much under-rated, as well as their power of disturbing the peace of the community. As we could not promise to insert the half of these communications without printing our whole annual quantum of matter in one day, which would not be perfectly convenient for us, and perhaps, even less so for our readers, we shall commit the whole of them to the flames, as we wish to have no personal communication with the writers, and have no curiosity to know the place of their abode. Many other journals, however, exist in this metropolis, to the Editors of which, if they prove inter-

visible, our invisible friends may transmit their letters; and if it save the future pillaging of our pages, it may be matter of gratulation to all parties.

We have also to acknowledge the receipt of three hundred and fifty-four letters connected with the same subject, but which we have not had leisure to examine minutely, seeming to be animadversions on, answers to, or praises of, the communications addressed to us by Satan. As we cannot promise the appearance of all these, unless we were assured of surviving the present century; and as we wish to pay every attention to the requests of those friends who have taken the trouble to write for our advantage, we shall slip into our portfolio for the home department, and print as many of those which come to hand as will fill a page of our miscellany; trusting that the produce may be as fair a specimen of the remainder, as the samples at Dark Lane are of the grains they represent, or the patches of the clothier the webs which they are meant to typify.

The first comes from the City; and is as follows:

*To the Editor of the Literary Gazette.*

Sir,—Since reading your communications on the Devil, I have not had a moment's comfort. My imagination conjures up demons at every step; and whether seated in my shop or walking in the street; whether at the club or the theatres, I picture to myself the Evil One in every person I meet, and any I detect traits of his character in every eye I see. My wife, who is also a constant reader of the Literary Gazette, suspects, on the same principle, that I am not so good as used to be; I dare scarcely look or speak to a female without being suspected of an intrigue; and though my spouse is a notable roman in many respects, I am afraid, from her attention to our gentlemen customers, that I begin to see evidences in her conduct of the undue influence of the enemy of our race.

My instant determination on reading these letters, was to avoid all appearance of being under the controul of such a master; and accordingly erased the words "goods under prime cost" from my shop-bill, and resolved to ask no more from my customers in future, than I really meant to sell the goods for, without enhancing the value of the bargain, by telling the palpable falsehood (too common in our profession,) that they were considerably under the manufacturer's prices. By this proceeding, I indeed satisfied my conscience; but I find all my customers have left me, although my goods, as may be seen by all at my shop, are of equal quality, and as low in price, as those of my neighbour, Mr. Gobblegoose, who has realized a handsome fortune; though, if his assertions are to be believed, he loses by every thing he sells. In short, Sir, I find that if I act honestly, and keep according to my conscience, I must starve; and that there is no resource for me, but to return to those tricks and deceptions, which, however hurtful to our future happiness, are essentially necessary to our present comfort.

As your paper is very extensively read, I

should wish, for the character of our profession, that you would make my grievances known in your own manner in an early publication. And I shall adhere to my present plan for another week, in the hope that, by your publishing the circumstances, I may, in the return of customers to whose ears truth may be acceptable, be enabled to acquire the means of supporting myself and family; for unless some such thing be done, I must either shut up my shop or my conscience, as there is no possibility of procuring a livelihood by dealing honestly and speaking truth, as things are at present arranged in London. I am, Sir, your most humble Servant.

ABRAHAM MEANWELL.  
Cheapside, Dec. 7th, 1820.

Dear Sir,—Do tell me if the Devil ever takes the shape of a handsome young man, or appears in the uniform of an officer of the guards. I have two admirers, who both of them have sworn a hundred and a hundred times, they love me beyond any thing you could think of; but I must not tell Pa or Ma. Do you tell fortunes? Dear Sir, Yours truly,  
ARABELLA YOUNGLEY.

*Answer by the Editor.*

If a man talks of love, with caution trust him; But if he swears, he'll certainly deceive you.

Sir,—Having read Satan's third letter very carefully, I am convinced that he is right in what he there asserts; and I have to request the favour of your inserting the following notice in your paper, of a work I am about to commence, viz. "Dr. Ebenezer Longhead is at present engaged in writing a *History of the World*, from its beginning to the present time; including a particular account of all those sovereigns, states, and nations, who have acted on systems of polity prescribed by the Devil, and evidently calculated to serve his peculiar purposes. The work will be completed in one hundred and fifty volumes quarto, as nearly as can be conjectured, including a supplemental volume, containing the history of those kings and kingdoms, who have acted on opposite principles." And you may add, as expressive of our own sentiments, "that you have no doubt, from the known learning and abilities of the author, that this will be the most important work ever published in Britain." I am, Sir,  
Your most humble Servant,

EBENEZER LONGHEAD, LL.D.  
Lincoln's Inn Fields, 12th Dec. 1820.

Sir,—If Satan is to be your correspondent, I shall cease to be your reader. Yours,  
Greenwich. THOMAS SHORT.

Mr. Editor,—Have the goodness to send me twelve copies of every Gazette in which the Devil appears, made up in a parcel, and sent by the coach to your humble Servant,  
DAVID DROLL.

Northampton, 5th Dec. 1820.

Sir,—In your Litterary Gazette, or Gimmel of Billies letters as you call it in German, which I ride dully afore it goes up stairs to my Lefe, I seed a litter from the Evil won, as I thinks is mint to satirize our Sacks, thof I cant say I undirstands its porpus completely, and I dnnol see what rite either yow or the Divil has to make a tax on our

petycots or illush'ons to Leda's drays; and if I wer your wife Mr. Idioter, I wold lett yu know that you have no byanes with other pebbles puttycots; or wether they wore stufft guns or not. Mend your own sacks, Sir, I uin the meal sacks; and let me tell you that it is a sham for you in a printit Gurnel to sirkil skaudlous imputashions to the perjulas of chest and vircetws wimmen at the instikashon of the Feather of Lice. And to shoe you that I dont mind your insulashions a cooper varthing, I shell put up my petycots as far as I pleas and farther, and lett them as has not andsome hancles klp them down to consal them for werry obvice raisins.

Yours to command,  
GROSNOR SQUARE. MARTHA BLUNT.  
Dear Ed.—Capital quiz that of Satan's and yours... devilish good idea. Do drive the dear creatures to church—it will be a charming variety in life, and keep the ready in our pockets lost at the pictures. How demure the sly ones will look before the parson. Touch them up about putting a little more stuff in their bosom gear—or say they went naked like Adam and Eve. How would that do? Yours in haste,  
Piccadilly, Tuesday. HARRY SPURD.

Friend,—I see from the late publications that the Evil One, who is called Satan, Beelzebub, and the Old Serpent, has been inditing epistles to thee, and I much marvelled thereat, though I have often evidence of his presence in this great city, in the temptations to which my frail tabernacle is exposed in walking its crowded streets. What he saith to thee about the vanity of women's appareling, and idle amusements, is not far from the truth; and if he had exposed the folly of the creatures whom men call Dandies, and who walk in a vain shew, I should not have been sorry therefore. Also the adorning of dannels with gaudy trappings, and putting coloured earth upon their faces—this also is vanity; though we read of the Jews putting ashes on their heads when they had committed grievous sins. Thou perhaps may be able to say whether this practice is not followed by our fair countrywomen on the same principle. Moreover, the rattling of spotted bones in a vessel, and spending nights in looking at Images on pasteboard, this ought to be reprobated; and his ideas of murder by hired men in red coats, is not far from the opinion entertained by the Society of Friends. But I counsel thee to be on thy guard against the arch deceiver; for wolves sometimes assume the clothing of the sheep, to serve their own purposes; and even Sarah, the wife of my bosom, was quite another thing than she is now, before she was the spouse of  
Thy Friend,  
SIMON PURE.

Cornhill, 7th of the 12th Month.

## THE DRAMA.

COVENT-GARDEN.—Mr. Vandenhoff. On Saturday, this gentleman made his London debut in the arduous character of King Lear. This attempt, and the reports circulated in the theatrical world previous to his appearance, marked him out as an aspirant to the

highest honours of his difficult profession. The performance of a single part does not furnish grounds for us to pronounce whether he will accomplish this great object, or fail; but we may safely say, that he has displayed considerable talents, though conjoined with some drawbacks which took away from the full effect of his acting. Mr. Vandenhoff appears to be somewhat taller than Mr. Kean, (who, by the by, has arrived at New York,) of an active and agile form, with a voice of rather strange quality, and the owner of a countenance of indolent expression, though not absolutely bad for the stage. Thus physically constituted, his mental requisites seem to be of a finer cast. He has too much judgment to be an imitator, and too much feeling to be a mannerist, and too much talent to be a drudge. Unquestionably, it is our opinion, that his chief forte is passion. The most exquisite art, without sensibility, seldom or never excites sympathy; and the actor who does not feel strongly, can hardly hope to affect powerfully. The most original of Vandenhoff's markings in *Lear*, arose out of this source. When he merely followed scenic traditional delineation, he was inferior to several of his predecessors; but when cheered by the applause of the spectators, and wrought into an ardour of self-possession, he gave parts in a style of excellence which we have seldom seen surpassed. His vacillation between his two daughters, for instance, was peculiarly natural and forcible. When stung by the viper Goneril, he ran towards Regan, as if the later and sharper sting had obliterated the memory of her unkindness; and then the sudden recollection of that ingratitude palsied his frame, and stiff d'appeal almost bursting from his lips and heart. Torn then with the overwhelming conflict of their double treachery and wrong, he rushed forth, pouring execrations on their unfeeling heads, and exclaiming the more merciful elements. It is not our intention to enter into the minutiae of the play; but we have particularised our instance, to show that Mr. V. is capable of very noble conceptions, and of the vivid execution of them. His voice might occasionally break into a girlish tone; his animation might exceed the bounds of age, even when edified with the supernatural energy of madness; and there might be other objectionable points in his acting; but it would be unjust to press them against him on a first night, and in such a character as *Lear*. We rather hail him as a welcome acquisition to the stage; and are convinced, that he has abilities which will, if he can discard a redundancy of action, and other provincial common place defects, give him a fair chance of becoming a favourite. His Sir Giles Overreach, on Thursday, was inferior to his *L. ar*.

#### VARIETIES.

On the 17th ult. the objects furnished by the *Society of the Friends of Art*, were exhibited in one of the galleries of the *Hotel des Menus Plaisirs du Roy*. The exhibition consisted of forty pictures, on various sub-

jects. *Heloise and Abelard* surprised by the Canon Fulbert, and a scene from the history of the Spanish war, are among the most remarkable pictures. The gallery also contains a beautiful plaster model of *Leda and Jupiter*, in the form of a swan. The exhibition has been much frequented by visitors. — (*French Paper*.)

*Anecdote of George IV.*—The two Owyhee Chiefs were introduced to his Majesty the other day at Carlton Palace. The King was amused with their conversation, through an interpreter, and asked a good many questions. Among other things, the elder Chief told him he had six wives: upon which his Majesty good-humouredly observed—"Notwithstanding which you left your country! well, I have but one, and I find that enough to manage!"

The Conway, Captain Basil Hall, has reached Rio Janeiro. This is the ship sent from England, by the Admiralty, farther to explore the new antarctic land recently discovered, and of which we have given an account as far as has yet been ascertained.

*Oliver Goldsmith.*—The birthday of Oliver Goldsmith was celebrated on the 6th inst. at Ballymation, in Ireland, near which place this fine genius was born on 29th November 1728. An annual observance of the day in the capital is projected, and a monument is about to be erected to this one of *Hibernia's* greatest sons. These national festivals are always to be applauded; they are at once a noble reward and excitement of talents.

Mr. Lewis Grummit, formerly an eminent grazier in Lincolnshire, died a few days ago in that county at a very advanced age. It was from an hospitable joke of this worthy man's that Dr. Goldsmith took the hint of *Melrose* mistaking the house of *Mr. Hardcastle* for an inn, in the comedy of *She stoops to Conquer*. The circumstance was as follows:—Mr. Grummit late one night met a commercial traveller, who had mistaken his road, and enquired the way to the nearest inn or public-house. Mr. G. replied, that as he was a stranger, he would show him the way to a quiet respectable house of public entertainment for man and horse, and took him to his own residence. The traveller, by the perfect ease and confidence of his manner, showed the success of his host's stratagem, and every thing that he called for was instantly provided for himself and his horse. In the morning he called in an authoritative tone for his bill, and the hospitable landlord had all the recompense he desired in the surprise and altered manners of his guest. Many other whimsical acts of kindness are related of him.—*Can. Chron.*

*Cleopatra's Needle.*—This celebrated monument of antiquity has been presented to his Majesty George IV. by the Pacha of Egypt, and is expected to arrive shortly from Alexandria. It is intended to be set up in Waterloo-place, opposite Carlton Palace. The weight of the column is about 200 tons, the diameter at the pedestal seven feet. This magnificent column was obtained through the influence of S. Briggs, Esq. the British Resident at Grand Cairo, with the Pacha of Egypt.—(*Daily Paper*.)

*Curiosity.*—The passion for sights is strongly displayed by the crowds at every execution. In Paris a similar impulse induced multitudes to rush to the *Murges* fortnight ago, to see the dead body of the pretty oyster-girl who was assassinated by a soldier, and whose corpse, it was expected, would be exposed, according to custom, at that place. Happily for decorum, it was owned by her parents, and buried within this ceremony.

#### LITERARY NOTICES.

We understand that the literary world is on the eve of being presented with a life of Voltaire, from the maiden pen of a gentleman hitherto more distinguished in the *Melan Hunt* than in the pursuits of literature, and heretofore far better known on the *parc* as the fashionable streets, and in places where *Dandies* lounge, than in *The Row*, or circle of science.

We hear that among Lord Byron's forthcoming labours, the castigation of a *Review* and a Magazine is included: Translation from the Italian, too, will appear, as well as from Ovid's *Epistles*: Two other *Cantos* of *Juan*, &c. &c.!

*Prussian travellers in Egypt.*—The Prussian General Menu Von Minutoli, who has undertaken a scientific tour in Egypt, Syria, Asia Minor, and Greece, accompanied by an architect, an orientalist, and two naturalists, has written to his patron (his royal highness Prince Charles of Prussia), a letter from Alexandria, dated the 13th of September, in which he gives an account of an interview with the viceroys of Egypt, Mahomed Ali Pasha, and anticipates the safe and successful prosecution of his object.

#### METEOROLOGICAL JOURNAL.

DECEMBER 1820.

Thursday, 7.—Thermometer from 44 to 56. Barometer from 30, 16 to 30, 5. Wind S. W. 1, and 2.—Cloudy till the afternoon, when it became clear, and settled.

Friday, 8.—Thermometer from 46 to 52. Barometer from 30, 24 to 30, 5. Wind S. W. 2, and W. b. S. 4.—Cloudy.

Saturday, 9.—Thermometer from 44 to 51. Barometer from 30, 33 to 30, 5. Wind S. W. 1, and 2.—Generally cloudy till the evening, when it became clear.

Sunday, 10.—Thermometer from 45 to 54. Barometer from 30, 21 to 30, 13. Wind S. W. 3.—Cloudy.

Monday, 11.—Thermometer from 47 to 54. Barometer from 30, 02 to 30, 02. Wind S. W. 1, and 4.—Generally cloudy. A misting rain in the morning.

Tuesday, 12.—Thermometer from 45 to 55. Barometer from 29, 80 to 29, 72. Wind S. W. and S. b. W. 1.—Morning cloudy with rain; afternoon clear, and heavy rain in the evening. Rain fallen, 175 of an inch.

Wednesday, 13.—Thermometer from 45 to 56. Barometer from 29, 56 to 29, 77. Wind S. b. W. 4, and N. E. 3.—Raining all day, and cloudy till the evening, when it became clear. Rain fallen, 5 of an inch.

Edmonton, Middlesex. JOHN ADAMS.

Edmonton.—In the lines to *Sageen*, &c. &c. for *lands* read *land*.

### Miscellaneous Advertisements, Connected with Literature and the Arts.

**NEW CIRCULATING LIBRARY, 167,**  
New Bond Street, near Grosvenor Street. J. AN-  
DREWS begs most respectfully to inform the Public,  
that he has OPENED a LIBRARY at the above Resi-  
dence, which will be principally confined to a liberal  
supply of the New English and French Works of general  
interest. Fourteen years' experience has convinced  
J. Andrews that it is the New Books the Public expect,  
and are anxious to get from the Libraries; consequently  
it is his determination to give an unlimited supply of  
every good Book, as soon as published, that his Sub-  
scribers may not be subject to the usual delay and diffi-  
culty in getting them. By this arrangement it is his  
intention to exclude any Work of established char-  
acter which has been previously published, and which  
he may be required to procure. J. Andrews has well  
left Mr. Ebers, by which name he was more generally  
addressed than his own, during the number of years  
that he conducted the business in Old Bond Street.  
Bookbinding, Stationery, Bookbinding; Vases and  
other Cards engraved and printed; Boxes and Tickets  
for the Opera, by the Night or Season; and Private  
Boxes at Covent Garden and Drury Lane Theatres.

### Popular Psalms and Hymns adapted to Favourite Airs.

In 1 vol. 4to. 11. 11s. 6d. neatly bound,  
**THE BEAUTIES OF MOZART, HANDEL,**  
PLAYERS, HAYDN, BEETHOVEN, ROSSINI,  
and other celebrated Composers, adapted to the words  
of popular Psalms and Hymns, for one or two Voices;  
with an Accompaniment, and occasional Symphonies for  
the Piano-Forte, Organ or Harp. By an eminent  
Professor.

\*A The volume contains Seventy-nine Tunes and  
Nine Preludes.—Printed for S. Leigh, 18, Strand; and  
also by the Booksellers and principal Music-sellers in  
the united Kingdom.

### BOOKS PUBLISHED THIS DAY.

In 2 vols. 8vo. with Twenty-Four Illustrative Engravings  
Price 21s. 6d. boards.

**AN ACCOUNT OF THE ARCTIC REGIONS,**  
with a History and Description of the Northern  
Whale Fishery. By WILLIAM SCORESBY, Junr.  
F. R. S. E. Printed for Archibald Constable and Co.  
Edinburgh; and Hurst, Robinson, and Co. 90, Cheap-  
side, London.

This Work is addressed both to the scientific  
and the mercantile world; the first volume containing a full  
Description of the physical Condition of the Arctic Re-  
gions, and the 2d volume a detailed Account of the North-  
ern Whale Fishery, including the outfit of the vessel,  
the mode of fishing, the expence, profits, &c. The most  
ample testimony has of late years been borne to Captain  
Scoresby's character as a man of science, by some of  
the most distinguished philosophers of this country and  
the Continent; and the experience derived from so-  
several voyages to Greenland, joined to the invincible  
success which he has experienced in the whale-fishery,  
must render Captain Scoresby's Work the most desirable  
guide to those who embark their capital in this impor-  
tant branch of our trade.

In 12 vols. 8vo. beautifully printed by Ballantyne, with  
vignette titles. Price 7l. 4s. boards.

**NOVELS AND TALES of "The Author of  
Waverley,"** comprising Waverley, Guy Ramm-  
er, the Antiquary, Rob Roy, Tales of my Landlord,

and Hurst, Robinson, and Co. 90, Cheap-side, London.  
Of whom may be had,

ILLUSTRATIONS of the NOVELS and TALES of  
the "Author of Waverley," in 12 prints, with vignette  
title. Engraved by Heath, Warren, Englehart, Rom-  
ney, Meyer, Lissac, &c. from original Designs by Wil-  
liam Allan. In 12mo. 11. 4s. 8vo. 11. 11s. 6d. Proof-  
on India Paper. Imparto. 21. 12s. 6d. Ditto before  
the letters, Colombar 40s. 31. 3s.

### Between on Typhus Fever.

8vo. 8d. price 6s. second edition,  
**A SUCCESSFUL ACCOUNT OF THE TYPHUS,**  
or Contagious Fever of this Country, exemplified  
in the Epidemic which prevailed in the Metropolis in  
1817 and 1818; with the appropriate method of treat-  
ment, as practiced in the House of Recovery. To  
which are added, Observations on the nature and pro-  
perties of Contagion, tending to correct the popular no-  
tions on this subject, and pointing out the Means of  
Prevention. By THOMAS BATEMAN, M.D. F.R.S.  
London: Printed for Longman, Hurst, Kees, Orme,  
and Brown. Of whom may be had, by the same  
author.

**REPORTS ON THE DISEASES OF LONDON,** and the  
State of the Weather, from 1804 to 1816, in 8vo. 5s.  
boards.

**A PRACTICAL SYNOPSIS OF CUTANEOUS DIS-**  
EASES, the 5th ed. in 8vo. 12s. 6d.  
**DELINATIONS OF CUTANEOUS DISEASES,** in  
4to. with upwards of 70 coloured Plates. 12l. 12s. 6d.

In 1 vol. 12mo. price 6s. boards, the second edition of  
**ELISABETTA**; ossia, gli Emiliati nella Siberia.  
Tradotta dal Francese di Madame COTTIN, da  
M. SANTIAGUO. Aspetti di G. W. B. Whittaker,  
H. Colburn & Co., Longman & Co. Of whom may be  
had, by the same author.

2. Dictionary of the Peculiarities of the Italian Lan-  
guage. 8vo. price 9s. 6d. boards.

3. A Compendious and Easy Italian Grammar, 12mo.  
price 6d. boards.

4. Practical Exercises upon all the Parts of Speech in  
the Italian Language, 12mo. price 3s. 6d. boards.

**TRAVELS IN CANADA, and the UNITED STATES,**  
in 1818 and 1817, in 2 vols. 14s. 6d. the second  
edition.

"Mr. Hall is a clever, lively man, very much above  
the common race of writers; with very liberal and re-  
asonable opinions, which he expresses with great bold-  
ness."—Edinburgh Review, No. 61.

In one thick vol. 8vo. with plates, by Lorry, exhibiting  
153 Figures of Minerals, &c. 11. 1s. 6d.

**AN INTRODUCTION TO MINERALOGY:**  
comprising the Natural History and Characters  
of Minerals; and a Description of Rocks, both simple  
and aggregated; with a New Tabular Arrangement of  
Earthy Minerals, on a Plan designed to facilitate the  
Knowledge of that class of Substances. To which is  
prefixed, A Series of Conversations, explaining the  
Principles of the Science, and the Elements of Crysta-  
llography. By ROBERT BAKEWELL, author of  
an Introduction to Geology. Printed for Longman,  
Hurst, Kees, Orme, and Brown, London.

### History of the South of India.

In 4 vols. 4to. price 6l. 6s. boards.

**HISTORICAL SKETCHES OF THE SOUTH**  
**OF INDIA.** In an attempt to trace the History  
of Mysore. From the Origin of the Hindoo Govern-  
ment of that State, to the Extinction of the Mahom-  
medan Dynasty in 1799; founded chiefly on Indian Au-  
thorities, collected by the Author while officiating for  
several years as Political Resident at the Court of Mys-  
ore, by COLONEL MARK WILKS. Printed for  
Longman, Hurst, Kees, Orme, and Brown, London.

"This laudable work is entitled to much public  
attention, gratitude, and approbation. From docu-  
ments hitherto unexplored, it brings into circulation  
many important facts concerning the History of Mys-  
ore during the last two centuries."—Monthly Review.

In 8vo. price 6s. 6s. boards.

**THE CHARACTERS OF THE CLASSES, OR-**  
**DERS, GENERA, AND SPECIES; or, The Char-**  
acteristics of the Natural History System of Mineralogy,  
intended to enable Students to discriminate Minerals  
on principles similar to those of Botany and Zoology.  
By FREDERICK MOHS, Professor of Mineralogy,  
Friburg. Printed for Longman, Hurst, Kees, Orme,  
and Brown, London; and W. and C. Tait, Edinburgh.

### Humboldt's Travels in South America.

In 8vo. price 21. 17s. vol. 1, in IV, of

**THE PERSONAL NARRATIVE OF M. DE**  
**HUMBOLDT'S TRAVELS to the Equatorial Re-**  
gions of the New Continent; during the Years 1799-  
1804. Translated by HELEN MARIA WILLIAMS,  
under the immediate inspection of the author. Printed  
for Longman, Hurst, Kees, Orme, and Brown, London.  
Of whom may be had,

RESEARCHES ON THE INSTITUTIONS and MONU-  
MENTS OF THE ANCIENT INHABITANTS OF AMER-  
ICA, (being Illustrations of the above Work) comprising  
the whole of the Text of the Atlas Pittoresque, and  
a selection of the Plates. By M. DE HUMBOLDT. A  
few coll. in 8vo. price 11. 11s. 6d. bds.

A new edition, in 2 vols. with 16 additional Sermons, price 1l. 4s. 6ds.

**SERMONS, on the NATURE, OFFICES, and CHARACTER of JESUS CHRIST.** By the Rev. T. POWELL, &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"The spirit of a Christian teacher pervades these volumes, and gives them an interest which the most ingenious illustrations, or the most eloquent periods without that spirit, would fail to impart."—*British Critic*, March, 1819.

*Church of England Sermons.*

Sanctioned by the expressed approbation of several Prelates and distinguished Dignitaries of the Established Church, and composed for the use (more especially) of Young Persons, Private Families, Country Congregations, and the Middle and Lower Orders of the Community, the fourth edition of **SERMONS on the EPISTLES or GOSPELS**, for the different Sundays, &c. in 2 vols. 12mo. price 14s. boards.

**SERMONS by the Rev. CHARLES ROBERT MATURIN, Curate of St. Peter's Church.** Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. 30, Chesapeake, London.

"In the volume before us, there is so much of what is excellent, as to give an additional cause for lamenting that the few facilities of its author should be degraded to any labour inferior to the high pursuits of his profession. As to whole these Sermons are written in a pure taste than any of his productions, and they contain passages of great richness, beauty, and vigour."—*Eclectic Review*, December, 1820.

*Stothard's Normandy, &c.*

In 4to. with numerous engravings, after drawings by Charles Stothard, F. S. A. Price 2l. 12s. 6d. boards. **LETTERS, written during a TOUR through NORMANDY, BRITANNY, and other Parts of FRANCE, in 1819** (including Local and Historical Descriptions; with Remarks on the Manners and Character of the People. By Mrs. CHARLES STOTHARD. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"We have to express our entire admiration of this Work, and announce it to our readers as more eminently calculated to amuse them at its manner, and delight them with its embellishments."—*Literary Gazette*, 188.

*In 12mo. price 12s. boards.*

**THE NATURAL HISTORY of ANTS** By Mr. P. HUBER, Member of the Physical and Natural History Society of Geneva, and Corresponding Member of the Natural History Societies of Turin and Gironne, &c. Translated from the French, with additional Notes, by J. H. JOHNSON, M. D. F. R. S. F. L. S. &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

*Miss Benger's Life of Tobin.*

*In 8vo. price 12s. boards.*

**MEMOIRS of Mr. JOHN TOBIN**, author of the Honey-Moon. With a Selection from his unpublished Writings. By Miss BENGEL, author of Memoirs of Mrs. Elizabeth Hamilton. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"We now dissent in the very pleasing, graceful, and interesting performance of Miss Benger's under the confident assurance that it will prove advantageous to the fame of the author, and eminently useful to the future interests of the British Drama."—*Antiquarian Review*, May, 1820.

In the press, and speedily will be published, in two Vols. with a fine portrait of General Mina, engraved from an original picture, painted a few weeks before he left England.

**MEMOIRS of the MEXICAN REVOLUTION**, including a Narrative of the Expedition of General Xavier Mina. To which are annexed, some Observations on the practicability of opening a Commerce between the Pacific and Atlantic Oceans, through the Mexican Isthmus in the Province of Oaxaca, and at the Lake of Nicaragua; and of the vast importance of such commerce to the civilized World. By WILLIAM DAVID ROBINSON. London: Printed for Lackington, Hughes, Harding, Mavor, and Lepard, Finsbury Square.

**THE ONLY CHILD**; or, Portia Bellenden, price 7s. 6d. 1815. By a Lady of high Education in the literary world. Printed for John Ebers, 27, Old Bond Street.

This 3d. edition, in 8 thick volumes 8vo. corrected and improved, with a Map, 3l. 3s. 6ds.

**THE HISTORY of the ANGLO-SAXONS**, from their first appearance in Europe to the end of their Dynasty in England; comprising the History of England from the earliest period to the Norman Conquest. By SHARON TUCKER, F. R. S. A. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Also by the same author,

**THE HISTORY of ENGLAND**, from the Norman Conquest to the conclusion of the Reign of Henry I. Also the History of Religion in England. The History of English Poetry, and of the English Language from Literature. In 2 volumes quarto, price 1s. boards.

*In 8vo. price 7s. boards.*

**SOUND MIND**; or, Contribution to the Natural History and Physiology of the Human Intellect. By JOHN HASLAM, M. D. late of Pembroke Hall, Cambridge; formerly President of the Royal Medical, Natural History, and Chemical Societies of Edinburgh. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Price 4s. No. IV. completing the second volume of **THE RETROSPECTIVE REVIEW**; consisting of Criticisms upon Analyses of, and extracts from Curious, Useful, and Valuable Books at Langens, from the Revival of Literature to the Commencement of the present Century: continued Quarterly. Contents of No. IV.: Montaigne's *Essays*; Hentz's *Chastellain*; North's *Life of Lord Grey*; Gifford's *Barley's Genuine and Spurious*; *Leviathan*, a Comedy. Some Jeany's *Dissipation*; Sir William Darnley's *Goodnight*; Information to Pilgrims. *Gesta Romanorum*; Sir Walter Scott's *Remains*. Phineas Fletcher's *Purple Island*. Mary's Discourse of the Travels of Sir Amory Smith. M. St. Eloy's *Image of Governance*. Fainted by C. and H. Baldwin, Negative Street; and T. Topham, Old Bond Street; and to be had of Booksellers.

**R. ACKERMANN**, 101, Strand, proposes to publish, in Six Monthly Parts, as *Sketches and Picturesque TOUR of the SEINE* from Paris to Sea; illustrated by twenty-four highly finished and engraved, from Drawings made for the purpose by Lewis, Bugin, and Grandall. The work will correspond with the histories of Oxford, Cambridge, Colleges and Schools, Westminster Abbey, &c. &c. London, the Tour along the Rhine, &c. &c. The First Part will be published on the 1st of March, 1821; 750 copies only will be printed on 4s. paper; and to the first 600 Subscribers the price will be 4s. each Part; the remaining 250 will be advanced to 5s. and 30 large Copies will be present.

*Figures of Christian Princes.*

In two neat pocket volumes, price 1s. **ILLYRIA and DALMATIA**; being a Description of the Manners, Customs, Dresses, and Character of the Inhabitants, and those of the adjacent Countries illustrated with thirty-two elegant coloured engravings.

This work forms the first division of a series, which will embrace the different Nations of the Globe, under the title of the *World in Miniature*.

Printed for R. Ackermann, 101, Strand. Also

**Part VIII. ENGLISH LAKES.** Four coloured plates, 6s.

**Part III. SYNTAX in SEARCH of a WIFE**, 1s. 6d.

**Part XXIV. of the CABINET of ARTS**, 10s. 6d.

**NEW SOUTH WALES**; being an Historical Account of the Colony and its Settlements, with True Views, engraved by W. P. Fraser, a Captain, late of the 60th Regiment, and of the 1st of Foot Macquarie and the newly discovered River Barings, by J. Outley, Esq. Surveyor-General to the Territory. Super-rt. folio, 2l. 2s.

London: Printed for the Proprietors, by W. POND, 47, Chancery Lane: Published every Saturday by W. A. SACHS, at the Literary Gazette Office, 35, (Former Change) Strand, where Communications, post paid, are requested to be addressed to the Editors.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 205.

SATURDAY, DECEMBER 23, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*The Earthquake: a Tale.* By the author of "The Ayrshire Legatees." 3 vols. Edinburgh. 1820.

*The Ayrshire Legatees* is a story, somewhat after the Humphrey Clinker manner, which has been continued through several numbers of Blackwood's Magazine, and possesses so much merit as to have excited in us considerable expectations about any work from the same pen. These expectations have not been fully realized by the volumes before us; for though they display abilities above the common order, they are assuaged by blemishes which detract much from their general merit. Among these we might specify the striking instances of haste and negligence with which the Tale abounds; but our chief objections are of deeper roots, and all springing from the want of nature. We are so tired of having human beings represented as acting from mystical perceptions, and on resistless as they are irrational impulses, on unaccountable sympathies and morbid notions, on imaginary destinies and unaccountable linkings, that the very approximation to such "primitives and primitives" (as Sir Hugh Evans would call them) sickens us to the soul. We would cheerfully allow a large quantum of sensibilities and fated circumstances as any poet or novelist could reasonably ask; but is it not monstrous to be fictions, presumed to be pictures of life and society, entirely founded, and depending in every incident on fripperies of this sort, while common sense and all the ordinary incentives to the actions of mankind are placed *hors de combat*? Certainly *'The Earthquake,'* is very far from being the worst book we have seen of this class; but it belongs to the school, and the school is offensive to our ideas of right reason and adequate motives. The *accus inquit* ought to be applicable in degree only more than in mythological reality, as a sound canon on which to frame a likeness of the affairs of intelligent creatures; and the rule of no effect without a cause, as German in all its extent to morals as to physics. Vague and incomprehensible grounds of action ought therefore, if not discarded, to be sparingly employed in delineating human character; and it is in our opinion, not only absurd, but dangerous, to draw men and things as if they were governed by indefinable and pre-destinated necessity, instead of free-will illumined by the light of the understanding. So much for the principle to which the leading circumstances in this novel may be traced: need we add, that the consequences are improbabilities in the fable, and exaggerated.

VOL. IV.

ration (if not unnatural distortion) in several of the dramatical personae.

The Earthquake at Messina throws, rather forcibly together, a number of personages, who had been previously connected, but separated by the current of worldly adventure. Among these, the most prominent are a Count Corneli, a Sicilian nobleman of large possessions, and a villain and murderer; Castagnello, the son of an English lord and a Neapolitan actress, a voluptuary with good disposition, but led astray by his passions; Lord Wildwaste, his half-brother; Lady Wildwaste, a noble dame; Bellina, daughter of a Neapolitan grandee, and the first love of Castagnello; Baron Alcamo, a pseudo philosopher, whose sister (the wife of Corneli) had mysteriously disappeared; the Baroness Alcamo, a fat lady; Francisco their son, an ingenious young man acting on preternatural fancies; Adeline his sister, a devotee; Alicia, sister to Lady Wildwaste, seduced and poisoned by Corneli; the lady of the same Count, a nun; and his son Ferdinando, whom he stabs to death in the end, mistaking him for Francisco. Robbers and monks, friends, and a score or two of other characters, fill up the canvas.

The story is too complicated for us to unravel within the compass which we can afford to such a task. We shall therefore content ourselves with quoting a few pages to show the abilities of the author in many ways, though obscured, as we think, by the prevailing clouds of carelessness and mysticism. We begin with the Earthquake at Messina.

"Dreadful as the convulsion was which, in the course of less than half a minute, shook the splendid city of Messina into fragments, and buried thousands of the inhabitants beneath the ruins, the silent horrors of the scene next morning were, to the humane heart, still more appalling. During the earthquake the cries and distraction of the people were overwhelmed in the thunder of the falling edifices, and the roaring of the sea that fled and returned with a furious violence. The presence of the destroying angel was veiled in the clouds of dust which filled the mid-day air with suffocating darkness. It was only by looking at the print of his steps when the clouds had rolled away, that the terrors of his might and wrath could be duly appreciated.

"Francisco rose at day-break with the intention of ascertaining what had been the fate of his different acquaintances, and particularly of a young man of the name of Salvatore Pratano, his most intimate companion, who lived in a distant quarter of the town. But the streets were choked with rubbish, and the face of every object so changed that he lost his way, and, after

wandering about for some time, he burst into tears at finding himself a bewildered stranger in his native city.

"He had passed churches which the people dreaded to enter, for the vaulted roofs were riven asunder, and the pillars that supported them overhanging their pedestals in the very act of falling. In one he saw the body of the officiating priest crushed beneath the statue of a saint that had been cast down from its niche while he was elevating the host at the altar. In others, where the people crowded during the convulsion, and from which, while the walls were splitting, they had as madly attempted to escape, he witnessed the most frightful spectacles of the dead and living, so locked and grasped, and kneaded, as it were, into masses together, that in many instances the persons employed in separating them were obliged to cut the dead bodies to pieces, before they could get the survivors extricated. But of all these terrible sights none affected him more deeply than the scene around the corpse of an old man, which his family seemed to have been depositing in a cadaver at the very moment when the city was shaken asunder. The roof had fallen in upon them as they were bringing the bier into the middle of the charnel-house, and all the mourners were killed on the spot, while the body remained uninjured; and the different skeletons stood around unmoved and entire, except one, which a little boy belonging to the funeral had convulsively seized by the leg and drawn across the heap of ruins which had crushed himself to death.

"In several places he passed knots of little children, sitting with their heads together, crying for their parents, and shivering with hunger. In others, he saw helpless old men who had lost their all and survived all their friends. When he first found himself at a loss to know his way, he enquired of a lady who was sitting gaily dressed at a window, and, as she did not answer, he thought she had not heard: he spoke to her again, and she looked at him. He addressed her a third time, but she only glared wildly, and raising her hands, shook them fearfully, and, turning her head away, made no reply.

"In many instances the sufferers were struck with a permanent consternation still more distressing, and he passed an old woman who was dangling the mangled body of her grand-child, and bestowing on it all the epithets of endearment. He stopped fascinated by the perfection of her misery, and she noticed him. In the same moment, an afflicting ray of reason seemed to dart across her mind, and, glancing a terrified look at the corpse to which she was singing so fondly, she dashed it from her with a

scream of horror and disgust, hiding her face in her hands against the refuted walls of her roofless house. Francisco himself ran from the spot, but he was soon stopped by a crowd round a crazed paralytic friar, whom the police patrol were dragging to prison. He had been discovered in the act of robbing a church of the relics of a martyr, celebrated for their miraculous efficacy. They had been enclosed in a golden casket, which the priests belonging to the church accused him of attempting to steal, as he had burst it open; but it was only the sacred bones that he wanted, and he held them still in his hand.

"The emotion arising from so many successive scenes of madness and affliction became insupportable."

The author's great felicity lies in brief introductions of his characters: we have never read a book in which this difficult task was more tersely and happily performed. We take two or three examples. The head of a Sicilian town—

"Signor Corbo, the Prefect, was one of those personages, who have a mighty notion of the importance of office, and especially of magisterial dignity, and he conceived that power was never so wisely administered but in proportion as it was done promptly. Having been once deputed to the capital to obtain the modification of a local tax, in which the members of government took no other interest than as it was productive, they, at his suggestion, changed it to another, but levied both the original tax and the new one next year. This mission, with the official civility that he had met with, turned the head of Signor Corbo, and he fancied himself from that time, qualified to be a minister of state; so that when he returned home, he conducted himself in a manner perfectly suitable to this high conceit, making fine speeches that made himself very ridiculous."

"The Prefect, on seeing the crowd approaching, ordered as many to be admitted, as his saloon could hold, and retired to an inner chamber, where his clerk or secretary was sitting paring his nails, having previously mended his pen, preparatory to the important investigation."

"At the upper end of the saloon, into which the officer dragged the innocent carchin, stood a large marble table, with an inkstand and a brazen lamp on it, at the one end was a chair of state, behind which, and under a canopy, hung the portraits of their Sicilian Majesties, under the right hand side of the table a rush bottomed chair was placed for the secretary."

"When the crowd had waited some time, a servant entered and lighted the lamp, a chamber bell was then heard to ring, and another domestic came from the inner apartment waving his hand as a signal for silence. He was followed by the secretary with a pen, and two or three sheets of paper in his hand; then came the grand personage himself, with an easy and negligent air, which was the more remarkable as it seemed to be put on for the occasion. It is not customary for provincial magistrates of

Sicily, any more than those of other countries, to affect this pompous negligence, but Signor Corbo had experienced the grandeur of its effect in the hollow familiarity of its intercourse with the great of Palermo."

"When Signor Corbo had taken his seat in the chair of state, he threw a glance of supreme discernment at the prisoner, and over the multitude, and turning to the secretary, said with a significant smile, drawing his hand over his mouth, 'A bad countenance,' and in the same breath raising his voice and looking from under his brows, he addressed the prisoner,

"Well, friend, what have you got to say for yourself?"

"Father Leonardo, not understanding the import of the question, answered timidly, 'Nothing.'

"'Nothing,' echoed Signor Corbo chuckling—and the clerk recorded the word, 'that is worse than I expected.'"

To match these genuine traits, we give the portrait of a medical practitioner of the same country.

"There lived at this time in Sciacca a little black and yellow apothecary, whom his friends styled Il Medico Gabinetto, but he was more generally known by the epithet of Poty Gabi. His hair was jet black, and it lay as smoothly on his head, as if it had been dressed with some of his own ointment. He commonly wore a purple velvet waistcoat, speckled with gold, green inexpressibles, a sky blue silk coat, with large yellow buttons, and a cocked hat that might have served a grenadier. His watch chain, long and dangling, was adorned with many trinkets, among others with a small shell, on which he set great value, as it had been brought from the West Indies; and when he walked abroad, or to visit his patients, he usually carried a silver headed cane, considerably taller than the man who grasped it by the middle."

"Nobody thought so much of Poty Gabi, as he did of himself: he allowed however that there might have been doctors who treated their patients with more success, but was quite sure none carried to the couch of disease more skill, or sent so much medicine, notwithstanding which many of his patients unaccountably died."

Poty Gabi is robbed of his watch, which accounts for the incidental appearance of another character.

"Among those who most frequently and seemingly most ferrently condoled with Poty Gabi on the irreparable loss which he had sustained, was a young man of the name of Gaminetti, who was not less satisfied with himself than the doctor with his own medical knowledge. Signor Gaminetti was indeed a very remarkable person, or rather, as he thought himself, he possessed a remarkable person, and that a very handsome one. His face was beautiful, and his cheeks were so prettily dimpled, and he knew this so well, that he constantly appeared with a smiling countenance, but his legs were round and not well formed, and, being inclined to corpulency, his belly was larger than became his years. But as he

was not sensible himself of these peculiar drawbacks on his beauty, he rendered them more conspicuous by his fondness for dancing, although he had no natural taste for the art, being destitute of any musical ear, so that what with his blunders as to time in the dance, attracting attention to his legs, and his inordinate conceit of his person, causing him not only to hold his head up but to land it back in dancing as in walking, he was really a very ridiculous figure."

"Signor Gaminetti, like all those who are on good terms with themselves, had a little spice of satire in his disposition, and he was in consequence regarded as agreeable company by many charitable minded ladies and gentlemen of Sciacca, who in a sociable manner delighted to pity the faults and misfortunes of their neighbours; and the story of Poty and his shell had often furnished him with a pleasant topic. It was however observed that although Signor Gaminetti was often invited to parties, he never gave any return; perhaps he thought the invitations but a just tribute to his singular merit."

We consider these to be spirited sketches, and laudable for the naïveté of the touches.

The second volume is the duller of the two, and fatigues the reader with a tedious journal of travels in the regions of Canosa. Here new persons start up, figure, and resemble the shapes of a magic lantern; and they rise without effect, they pass without interest, and disappear without regret as the part of the spectators. We shall not dwell on such visions, but proceed to the third volume, for the purpose of extracting one of the most vigorous and pleasing descriptions in the tale—it is that of Cangello's return to his native place.

"It was about noon when he reached the hotel where he intended to stay, and he felt so overpowered by the heat, that he stretched himself on a sofa and fell asleep. When he awoke the day was far declined, but he was anxious to revisit the well-known haunts of his childhood, he hastily changed his dress and went out. He did not expect to be recognized by any of his former acquaintance, for twenty years had passed since he had seen any of them, nor did he wish to make himself known."

"His first course was towards his mother's villa, which overlooked the town. He was anxious to ascertain if she was still living, but was deterred from going directly to the house by a painful feeling at once delicious and anxious, and reluctant."

"As he walked along, he thought the streets and buildings had universally become of a meaner appearance, and that every thing was touched by the hand of time, and wore an air of decay. He recognized in passing several houses where he had been an occasional visitor, and he lingered as he passed in the hope of seeing some one belonging to them, but the guests that went in, and the inmates that came from them, were strangers."

"In crossing the Corso, he saw at a short distance the palace of the Duke dei Fionchi (the father of Belina) but he could not make a resolution to go towards it. It appears

ed, in all respects, the same as when he left it on the fatal evening of his departure for Rome. Servants, in the same liveries, stood at the portal; the very awnings which were extended from the windows, seemed to be the same. Had he, however, enquired, he would have been informed that the master was changed; but such is the habitual system that grows up with hereditary wealth, that the characteristics of a great family often remain for ages unaltered, while the individuals that compose them fluctuate with the common tide of life, and are lost and forgotten in the general stream that has passed away.

"The first thing that he entirely missed, and it had been long removed, was a little rude shed, attached to a garden wall, immediately without the city, on the road which led to the hill where his mother's residence was situated. Under this shed, an old woman of a singularly neat appearance, and of a mild obliging disposition, was wont to keep a stall for the sale of fruit. She was a great favourite with the neighbouring children, and often in the cool of the shed he had sat in the hot weather with his playmates beside her. But she was dead many years, and a vile assemblage of docks and nettles, and rubbish, occupied the site of this favorite haunt.

"While he was looking at this little scene of desolation, a beautiful girl with a light step, bearing on her head a basket of flowers, came gaily down the hill, singing with the jocund carol of youthful animation. He thought he recognized the voice, and when she came nearer, he was convinced, in the feeling of the moment, that it was Brunetta, the daughter of his nurse, a happy tempered girl, who had often taken pleasure in teasing him while a boy, and he actually ran forward several steps towards her, when he perceived it was another. He, however, spoke to her, and heard, as if it had been a misfortune, that she was the daughter, and not the eldest, of Brunetta. He thought her beautiful, but far less so than her mother, and turned from her abruptly, while she pursued her way to the city, and resumed her song with the gaiety of a bird at liberty amidst its native bowers.

"As he approached the villa, he heard the sounds of elegant music in the garden, performed with all the skill and taste which, in happier days, distinguished the concerts of his mother's little parties, after her retirement from the stage. He listened with inexpressible delight: the whole painful interval since he had last been on that spot seemed cancelled, and when the sonata was ended, he heard his mother call him by name, and chide him as an unruly boy, for having disturbed the performance. But it was another Castagnello, the son of one of his sisters; and it was not his, but the mother of that Castagnello, who chided with so much tenderness.

"The emotion which this little incident and discovery produced, quite overcame him, and he retired to a distance dissolved in tears, but the sound of music was renewed in a cheerful strain, and he acquired self-possession to go to the villa. He did not wish to be known: he was desirous to avoid the congratulations which might naturally be expected on such an occasion, and to shun enquiries that he could not answer without equivocation and shame.

"With a palpitating heart, he went to the gate which led to the garden where the musical party were sitting, in an alcove covered with vines. It was open, but he hesitated to enter: a young man, of a gentle air, however, on observing him, invited him to come in. 'We are celebrating,' said he, 'a little festival in honour of a relation whom we have not heard of for many years. It is his birth-day, and he was my benefactor; as he is among strangers, strangers are with us to-day most welcome; I therefore pray you to join our party.'

"Castagnello recollected that it was his own birth-day, a circumstance which he had forgotten; and he could not be mistaken that the youth before him was the child of his sister, for whose education in England he had provided, when in that country. This was the only moment of pure delight that he had ever enjoyed, and it was at once the just and natural reward of the kindness that he had shown to the orphan.

"He accepted the invitation of his nephew, but he was more than ever resolved to remain unknown.

"The party consisted of about twenty persons, besides a number of boys and girls, the children of his contemporaries. As the sun was set before he reached the gate, when he entered the alcove, it was so obscured by the umbrageous leaves of the vines, with which it was covered, that the faces of the company could not be easily distinguished. This afforded him an opportunity of knowing which of his relations were present, but as he heard nothing of his mother, he began to conclude in sorrow that she was gone to that country from which no traveller ever returns. He observed, however, an aged lady at the upper end of the alcove, seated on an armed chair, which was adorned with evergreens and garlands, and raised on a platform. It was evident that she was the queen of the festival, and when he reflected on the other changes he had seen, he thought that she could be no other than his mother, but she sat silent: no one noticed her, nor did she appear to notice any one.

"Soon after he had taken his seat, the servants distributed coloured lamps amidst the branches of the vines, and by their light he contemplated this figure at leisure. She appeared to be about three-score, and she was bent into a hoop, but with infirmities more than old age. Her figure was meagre, her arms skinny, and her head, which drooped and projected over her withered bosom, shook with palsy. The expression of her countenance indicated the last extremity of imbecility and dotage, and a driving smile, that mocked all mirth, wavered among her features, as she endeavoured to look round on the lamps as they glittered among the leaves.

"Castagnello perceived that her grey hairs were adorned with a coronal of flowers,

and by the rich pendants of diamonds that sparkled in her ears—a tribute that had been paid to the motherless beauty of her youth—he recognized at last his mother. While he looked with anguish of heart on this fantastic spectacle, and saw that her mind, whose fine natural intelligence had once delighted and charmed the most polished spirits of Europe, was even more impaired than her person, he could not suppress his tears. At that moment the boy who bore his name came to her, and on her attempt to caress the child, she seemed to forget who he was, and to address him as her own Castagnello. The boy laughed at her mistake, and with an arch and playful look, asked her to sing one of her airs. The poor weak and vain old woman was pleased with the knavish flattery of the urelin, an illegit to scream one of her once-admired bravuras, which threw the child into an ecstasy of laughter—Castagnello could not withstand this: he started from his seat with indignation, and shaking the boy furiously, darted out of the garden, and ran to his lodgings agitated with the bitterest grief he had ever experienced."

"We need add no other proof of the talents of the writer, if more properly directed, and less crudely developed than in these pages. He appears to us to be a young writer, (though report ascribes the work to Mr. Wilson, the Professor of Moral Philosophy) and his work to have been cast out without undergoing that polish, which deference to the public, and a regard for his own fame, ought to have suggested. A little attention would have prevented the occurrence of such vulgarity as the mention of *ladia setting* on a sofa; of such blunders as *Tartar* for *Tatar*, a Turkish courier; and of such contradictions as that a prisoner was detained 'several hours' in a room where he 'was not allowed to remain long.' (page 269, vol. 2.) These, it is true, are but trifles; but it seems too much the fashion of late, for able writers to fancy that any thing they do is good enough for publication, and therefore they may spare themselves the trouble of correcting errors. Of the graver fault, generated between the heat of the mystagogue and the vapour of the pedagogue, we shall offer but two very short examples. The effects of a religious admonition are thus pointed:—

"His observations however had taken a strong hold of the outcast's mind, which in the whole course of the journey from Calabellotto to La Catholica, wandered as it were in a chaos of conjectures, and vague imaginings. His spirit was like the soul of an Atheist immediately after death, when it finds itself in the eternal regions, and still doubts if the things and elements around are ever-lasting truths, or the phantasma of a dream." (!)

"The resolution to change the character of his actions stood like a beautiful rainbow in the clouds that spread darkness over his future destiny. As often as he thought of the reception which his brother might give him, a fierce glance of despair flickered like lightning over the prospect, and a deep and aimless misanthropy rolled a peal of terrible and universal vengeance."

Yet this misanthropical scoundrel is decked out with a hundred virtues by the author. This mode of Nature's journeymen making men, is of evil tendency; for it perplexes and confounds the palpable relations of innocence and guilt.

We shall say no more, but that in the end all the characters die or are executed, having each reached the respective climax of becoming driveller, recluse, or assassin.

*Picturesque Tour from Geneva to Milan, by way of the Simplon; illustrated with Thirty-six coloured Views of the most striking Scenes, &c.* Designs by the Lorys of Neufchatel: Particulars, historical and descriptive, by F. Shoberl. 4to. pp. 136. London, 1820.

The distinction of a work of this class residing in the plates, it is impossible for us to convey to our readers an adequate impression of its nature. The praise of the pen very imperfectly illustrates the merits of the pencil and graver; and we can only state that these plates are generally characteristic, pleasing, well chosen, and ably executed. The work is therefore recommended by beauty in its ornaments; and indeed nothing of the kind can be more remarkable, nor afford a more distinct idea of the extraordinary scenery and stupendous forms of Switzerland; of the magnificent galleries and bridges belonging to the greatest work of Napoleon Buonaparte; and of the glowing loveliness of Italian landscape, than is here presented.

Mr. Shoberl has also acquitted himself with great ability in the letter press. His recollections are judiciously made, and entertainingly put together, to enhance the interest of the pictures. Of this we shall annex a few instances, and with these recommend the volume to the public. At Geneva, it is stated—

"The Library, which owes its origin to the illustrious Bonnavari, prior of St. Victor, at the time of the reformation. It contains 50,000 printed volumes and 200 manuscripts, among which are 24 volumes of sermons by Calvin, collections of letters of Calvin, Beza, Bullinger, and other reformers; sermons by St. Augustine, written on papyrus, of the 6th century; and a fragment of the accounts of the expenditure of Philip the Fair, of the year 1314, consisting of six small wooden boards covered with a wax-like substance, upon which the letters are engraved. In one of the apartments of the library are deposited optical and mathematical instruments, anatomical preparations, antiquities, among which is a circular silver shield, weighing 34 ounces, with embossed figures, and the inscription:—*Largitas D. N. Valentini Augusti*. It was found in 1721 in the old bed of the Arve. No more than two other shields of silver from the time of the Romans are known to be extant; both are in the royal library at Paris."

The following anecdote relative to the Simplon, is of another character.

"During the march of the army of reserve under Buonaparte, when consul, across the Great St. Bernard, 1,000 French and Helvetic troops were sent on the 27th May, 1800, under General Bethencourt across the Simplon to secure the pass of the Yeselles and Domo d'Ossola. Falls of snow and masses of rock had broken down a bridge, and the way for a space of sixty feet was interrupted by a tremendous abyss. A bold fellow volunteered to make the following hazardous attempt. Setting his feet in the holes made in the perpendicular rock to receive the timbers of the bridge, and stepping from hole to hole he fortunately reached the other side. A rope which he took with him was now stretched at the height of a man against the rock; General Bethencourt was the first who holding by this rope, which was of no great strength, and pursuing the steps of the first adventurer, crossed the chasm. He was followed by all his troops encumbered as they were with their arms and knapsacks. To commemorate this daring enterprise, the names of all the French and Helvetic officers are engraven in the rock. There were five dogs with this battalion. When the last man had got across, all these animals plunged at once into the abyss; three of them were immediately carried away by the impetuosity of the glacier torrent; but the two others were strong enough to contend with the stream and to climb the steep rock on the other side, where maimed and exhausted they made shift to crawl to the feet of their masters."

Near Gondo, (of which a very striking view is given) "The traveller, as he pursues the route, soon observes a large erection of simple but gloomy architecture, which admirably harmonizes with the general nature of the surrounding scenery. This is an inn belonging to the Barons Stockalper, who are the proprietors of several buildings of singular architecture along this route. It is composed of eight stories, but only two of them are habitable; and here travellers overtaken by a sudden storm find a welcome shelter. A chapel, and some inferior buildings, dependent upon and belonging to this inn, form the village of Gondo, which belongs to the Valais, though the Italian language is spoken by its inhabitants.

"A little to the south of this inn, on the frontiers of the Valais, at Zwischbergen, a gold mine was formerly worked by the family of Stockalper. The gold was found in pyrites, embedded in quartz. M. Maffioli has for some years been working three perpendicular veins, and has opened a shaft on the other side of the river, having reason to suppose that the veins are continued so far. The stream which comes from Zwischbergen, and forms a fine cascade opposite to Gondo, carries gold sand along with its current.

"The family of Stockalper, mentioned above, possesses extensive property in the Valais. It is related that one of its ancestors, by erecting buildings on various hills, awakened the suspicions of his countrymen, who were extremely jealous of their independence, and who sentenced him to forfeit

part of his property. In this dilemma, Baron Stockalper had recourse to stratagem: he buried large sums under the altar upon which he was directed to deposit his fortune, and swore that all he possessed was under the hand which he extended over the altar. It would be difficult to decide what degree of credit ought to be given to this tradition; but from a custom formerly prevalent in the Valais, it may be presumed to be founded on fact. When any individual became too powerful, a log of wood was exhibited to the people, and each of those who designed to associate against him who excited their alarm drove a nail into it. The form of this log was subsequently changed; it was carved into the figure of a man, and the head was adorned with cocks' feathers. Such of the citizens as had at heart the maintenance of the liberties of their country carried this statue into a public place. Here they stood round and asked it questions, but finding that it remained silent, they appointed one of their number to be the interpreter of its will. When this was made known, the most eloquent of the company exhorted the people to preserve their ancient customs, and to defend the public liberty; the day of execution was fixed, and if the unfortunate person against whom the storm was gathering, could not find means to appease the fury of those who were leagued against him, or was unable to resist them by force, he was obliged to flee and to leave his possessions at the mercy of the incensed people, who, headed by the wooden statue, the signal of disorder, broke into his house, which they pillaged, and destroyed all his effects. This custom originally instituted for the defence of public liberty, afterwards degenerated and was rendered subservient to personal or party animosity; so that by degrees it fell into disuse."

We shall conclude with only one example more of Mr. Shoberl's performance.

"Somma is interesting to the antiquary as the spot where Hannibal defeated Scipio; its local circumstances at least, so closely correspond with those described by Polybius and Livy, as to give the highest degree of probability to this notion. Castel Seprio is believed to be the *ricca* mentioned by those writers as the capital of the Insubrii; the hills and hillocks scattered over a plain of considerable elevation, the Tessino, which flows beneath, and the Alps whose bases commence here, all appear to prove the identity of this village. In one of the beautiful gardens that surround Somma, is a very aged cypress, the trunk of which is at least sixteen feet in circumference. It is a curious fact that in the upper part of this village water is found in great abundance nearly at the surface of the earth, while the inhabitants of the lower part can scarcely obtain it even by sinking the deepest wells. At Legnano are the remains of the palace of Otto Visconti, and two churches erected after the designs of the celebrated Bramante. Here too is an hospital for persons afflicted with a singular disorder called *pellagra*, which is epidemic in this part of the country. It begins with a slight cutaneous affection, which

is followed by total and absolute debility; and terminates in mental derangement and phrenzy. This disease was scarcely known till within the last fifty years; it spread considerably in 1781, and has since continued; a prize has been offered for the best memoir on the means of curing this disorder, but without effect."

#### BOOKS &c. FOR THE YOUNG.

##### *A Piece of Christmas Reviewing.*

Among the improvements of our age, there is nothing more obvious than the increase of inventions and labours, devoted to facilitate the instruction of youth; and we are convinced that generations succeeding us, will prove the beneficial effects of the pains thus bestowed on an object so vitally important. In former times, a manual or book, was constructed for the use of the heir of some mighty monarchy; but now, the meanest peasant child that can read, enjoys a hundred facilities for acquiring knowledge, such as a century ago no royal pupil could attain. At this season it may be said *mal-à-propos* to notice a few of the latest productions; and therefore, we trust, our mature friends will not quarrel with us for devoting a few columns to the younger branches of the social tree.

##### 1. *The Monarchy of the Bees: a Poem.* pp. 59.

This little book exhibits, pleasantly enough, some of the most remarkable traits in the history of one of the most curious creatures in existence; and is calculated to induce a love for natural history. We quote an episode, as an example of its style.

Two Bees, one morning fair in May,  
Did chase in quest of honey stray;  
The one was profligate and wild,  
The other sober, chaste, and mild.  
They had not travell'd o'er much ground,  
Ere they a wide-mouth'd vial found,  
With honey laden full and sweet,  
As though prepared their wants to meet.  
Th' unthinking profligate alights,  
And his compassion much invites;  
The sober youth, with cautious eye,  
Perceives, or fears, some danger nigh;  
Perhaps, while sipping round the brink,  
He might within the vial sink,  
And thus untimely meet his fate,  
While of the bonied sweets he ate;  
Forewarn'd of ill, he takes his leave,  
With promise to return at eve,  
And searches out an orchard fair,  
Where he procures him ample fare.  
Now sinks in shades the lamp of day,  
And onward bends the peer his way,  
But lest the striding tale should roam,  
He calls, to bid him hasten home;  
Upon the vial's brim he stands,  
But now, alas! too late commands;  
The giddy youth, while round he trips,  
Into the vial's mouth had slip't,  
Immers'd in sweets, he tried in vain  
The treach'rous vessel's brim to gain;  
Clogg'd and enfeebled in his wings,  
The viscid juice around him clings;  
Exhausted, when his friend draws near,  
He dying sinks, appall'd with fear,  
And in faint tones lamenting cries,  
Mourns his untimely end, and dies.

##### 2. *The World in Miniature.* 2 vols.

This is a pretty publication, just commenced by Mr. Ackermann. It contains a description of the manners, &c. of the inhabitants of different countries, and is neatly adorned with coloured engravings of natives in their several costumes. These volumes are assigned to the people of Illyria and Dalmatia, of the great Slavonian, Wende, and Illyrian families, such as Morlachsians, Croats, Montenegrins, &c. &c. Turkey, China, Russia, and Africa, are announced to follow: about one volume monthly. The whole will form a beautiful juvenile present; and we have only to hint to the compiler, to be very guarded in his description of particular ceremonies, so that they may involve nothing improper to be submitted to youthful imaginations.

##### 3. *The National Reader.* By the Rev. T. Clark.

A plainer performance, and sequel to the National Spelling Book. The lessons are judiciously selected, and there is a great deal of information in a cheap form.

##### 4. *Travels through England, Wales, and Scotland, in the year 1816.* By Dr. S. H. Spiker, &c. 2 vols.

These travels of an able foreigner, were not published distinctly as a work for young readers, and are indeed worthy of the favourable regard of persons of every age. But we cannot help considering them as peculiarly fitted, by their particularity and observation upon things (so familiar to seniors as to appear trivial to them), for conveying a just idea of the present state of their native land, to scholars and students of both sexes, not beyond their teens. In this point of view, we could hardly mention a more useful and meritorious book; or one from which a clearer insight into our statistics, manufactures, arts, commerce, &c. &c., may be obtained.

##### 5. *The Family Cyclopædia.* By J. Jennings.

Neither is this publication, strictly speaking, a book for children. It is however, as far as we can judge, from examining the three parts issued (out of Ten projected for its completion), a very useful family compendium of necessary knowledge. It is alphabetically arranged, and comprizes information on the subjects of domestic economy, agriculture, chemistry, medicine, &c. &c. It seems to be carefully and honestly compiled, and will, we think, be reckoned a valuable work by the middling classes, for whose benefit, as a Cyclopædia of reference, it seems calculated.

##### 6. *More Minor Lessons; or an Introduction to the Winter Family: with Aunt Eleanor's Stories interspersed.* 12mo. pp. 304.

A more proper and more entertaining book to put into youthful hands than this, we have rarely seen. The language is good, the sentiments moral; the one without fineness, and the other without affectation. A multitude of apt and interesting anecdotes,

renders the enforcement of sound principles as amusing as it is excellent; and we are sure, that both pleasure and advantage must be derived from the perusal of this well-conceived volume. We select one page easily separable, as a specimen. The following is told among other anecdotes, illustrative of the qualities of dogs.

"A lady, with whom I am acquainted, had two dogs—Perdue and Vixen, the one a spaniel, the other a terrier. These dogs were great favorites, and generally in the lady's sitting-room. Sometimes it happened that they were ordered out of it, and the humour shewn on this occasion was whimsical. If Perdue was first ordered to quit the room, she rose reluctantly, but always went and seized hold of the ear of her companion, Vixen, and so forced her out also; and, if Vixen had the command given her first, she never failed to perform the same ceremony on Perdue, when together, they contentedly sought another place of repose. It so happened that these favorites had puppies at the same time, all of which, except one, were drowned. About this single puppy the mothers were, for the space of a week, perpetually quarrelling; after which they were observed to agree perfectly well. On watching them, it was discovered that one mother nursed the puppy during the day, and then resigned her place to the other, who nursed it through the night."

##### 7. *Geographical Game. The Juvenile County Atlas.*

This is a pack of cards each with an English county upon it, and by playing the game, the geography of the country is taught. We have seen a similar invention in wood fitted together, so that when every piece was laid down, the whole formed England. In this respect, it had an advantage over cards, the blank edges of which do not allow the parts to come close together: but the cards have in turn the advantage of being more readily played, and of not wearing out so soon by frequent joinings.

##### 8. *A synopsis of the Roman History,*

Is what it purports to be, namely an enumeration of the principal events in Roman History, from the foundation of Rome to the extinction of the eastern Empire in 1460, by the Turkish victories over the Comneni and Paleologi. This synopsis is printed on the face of a large sheet of paper, which folds and puts into a case like a map: the whole being brought as it were into one view, tends to impress youthful minds more strongly; and indeed is useful as a convenient index even to the classical historian.

##### 9. *A Genealogy of the Kings of England and their issue, from William the Conqueror to the present time.* By R. Mitchell.

This is a still more generally useful work, engraved on a large sheet, and handsomely executed. It displays at once, in the customary form, the whole royalty of England since the conquest; and the marriages, and issue of all the families which have sat upon the throne. It is clearly devised, and looks

well from the armorial bearings &c., with which it is at once illustrated and ornamented. The copy before us is a third edition, which shows that its utility has been duly appreciated by the public; it is a very clever performance, and valuable for historical and biographical reference to old and young.

10. *The stream of History, showing the rise and fall of Empires, and the progress of the Arts, Sciences, and Literature of every nation in the World, from the earliest ages to the present time; originally invented by Professor Strass, with numerous additions and improvements, by C. Irving, LL. D.*

This admirable design being in truth what it pretends to be, we can only say that a more excellent production for instilling necessary knowledge, is not to be imagined; nor could the most learned among us conceive a better plan for impressing the grand outline of general history upon the mind. Every great people is represented by a stream which rises among the clouds of antiquity at the top of the map, and in descending to the bottom, mingles with other streams, or separates from them, as events require. These being coloured of different tints, the whole is rendered distinct and obvious. The chart is crossed by parallel lines divided into dates, as maps are into latitudes, which denote the eras of the rise and fall of the nations; and on the streams are inscribed the principal names, circumstances, and epochs, which ought to be remembered. Either for schools or libraries, this is a most valuable work.

#### BELZONI ON NUBIA AND EGYPT.

(Second Journey—Continued.)

Our last notice of this work closed with some remarks on the inestimable treasures brought to England from the scene of Belzoni's researches by the Earl of Belmore. That nobleman, we observe from the author, was the foremost to enter the newly discovered tomb of Sennetis, at Gournou; the foremost to explore, when first opened, the recesses of the second pyramid. It is quite delightful to find a man of his rank thus devoted to scientific pursuits; and the respect and admiration of the community will be enhanced when it is told that Lady Belmore shared these perils, and underwent all the fatigues of travelling throughout these eastern regions. The result has been the collection of many of the most extraordinary and valuable remains of the older world.\* Specimens of papyri, which, if any thing can recover a knowledge of the hieroglyphic language of Egypt, will essentially contribute to the accomplishment of that desideratum; and should that never take place, must throw prodigious light upon the mythology of a people from whom nearly all that is curious, interesting, and venerable in the history of mankind, is to be traced. His Lordship is equally rich in subjects calculated to illustrate the literature, the arts,

and the manners of the ancient Egyptians; and the examination of his museum has tended materially to confirm in our minds the theory of the learned Von Hammer, published in the Mines of the East, and translated into our Journal (see the Literary Gazette for 1818, Nos. 55 and 56). But though these antiquities have enlarged our views on the points which they embrace, and greatly increased our pleasure in perusing Belzoni, we must not dwell upon them so long as to detain us irrelevantly from our more obvious task of continuing the narrative of his second journey.

Continuing his excavations at Gournou and Carnak, Mr. Belzoni observed enough of the three modes of embalming the dead to confirm in the main the account of Herodotus, that the corpses of the great were kept from decay with the utmost care; that the richer classes were also disposed of in a costly manner, and that even the poor were obliged to liniments and nitre for a prolonged posthumous preservation. Among other notices the following is worthy of extract, as it may tend to explain the finding of animal bones in the sarcophagus of the pyramid, and indeed furnishes the best general information we have met with respecting Egyptian sepulture.

"I must not omit (says the author,) that among these tombs we saw some which contained the mummies of animals intermixed with human bodies. There were bulls, cows, sheep, monkeys, foxes, bats, crocodiles, fishes, and birds, in them: idols often occur; and one tomb was filled with nothing but cats, carefully folded in red and white linen, the head covered by a mask representing the cat, and made of the same linen. I have opened all these sorts of animals. Of the bull, the calf, and the sheep, there is no part but the head which is covered with linen, and the horns projecting out of the cloth; the rest of the body being represented by two pieces of wood, eighteen inches wide and three feet long, in an horizontal direction, at the end of which was another, placed perpendicularly, two feet high, to form the breast of the animal. The calves and sheep are of the same structure, and large in proportion to the bulls. The monkey is in its full form, in a sitting posture. The fox is squeezed up by the bandages, but in some measure the shape of the head is kept perfect. The crocodile is left in its own shape, and after being well bound round with linen, the eyes and mouth are painted on this covering. The birds are squeezed together, and lose their shape except the ibis, which is found like a fowl ready to be cooked, and bound round with linen like all the rest.

"It is somewhat singular that such animals are not to be met with in the tombs of the higher sort of people; while few or no papyri are to be found among the lower order, and if they occur they are only small pieces stuck upon the breast with a little gum or asphaltum, being probably all that the poor individual could afford to himself. In those of the better classes other objects are found. I think they ought to be divided into several classes, as I cannot confine myself to three.

I do not mean to impute error to Herodotus when he speaks of the three modes of embalming; but I will venture to assert, that the high, middling, and poorer classes, all admit of farther distinction. In the same pit where I found mummies in cases, I found others without; and in these, papyri are most likely to be met with. I remarked, that the mummies in the cases have no papyri; at least, I never observed any: on the contrary, in those without cases they are often obtained. It appears to me, that such people as could afford it would have a case to be buried in, on which the history of their lives was painted; and those who could not afford a case, were contented to have their lives written on papyri, rolled up, and placed above their knees. Even in the appearance of the cases there is a great difference: some are exceedingly plain, others more ornamented, and some very richly adorned with figures, well painted. The cases are generally made of Egyptian sycamore: apparently, this was the most plentiful wood in the country, as it is usually employed for the different utensils. All the cases have a human face, male or female. Some of the large cases contain others within them, either of wood or of plaster, painted. The inner cases are sometimes fitted to the body of the mummy: others are only covers to the body, in form of a man or woman, easily distinguishable by the beard and the breast, like that on the outside. Some of the mummies have garlands of flowers, and leaves of the acacia, or sycamore tree, over their heads and breasts."

"The next sort of mummy that drew my attention, I believe I may with reason conclude to have been appropriated to the priests. They are folded in a manner totally different from the others, and so carefully executed, as to shew the great respect paid to those personages. The bandages are stripes of red and white linen intermixed, covering the whole body, and forming a curious effect from the two colours. The arms and legs are not enclosed in the same envelope with the body, as in the common mode, but are bandaged separately, even the fingers and toes being preserved distinct. They have sandals of painted leather on their feet, and bracelets on their arms and wrists. They are always found with the arms across the breast, but not pressing it; and though the body is bound with such a quantity of linen, the shape of the person is carefully preserved in every limb. The cases in which mummies of this sort are found are somewhat better executed, and I have seen one, that had the eyes and eyebrows of enamel, beautifully executed in imitation of nature."

"Vases are sometimes found containing the embalmed entrails of the mummies. These are generally made of baked clay, and painted over: their sizes differ from eight inches to eighteen: their covers represent the head of some divinity, bearing either the human form, or that of a monkey, fox, cat, or some other animal. I met with a few of these vases of alabaster in the tombs of the kings, but unfortunately they were broken. A great quantity of pottery is found, and also wooden vessels in some of the tombs, as if

\* One of these precious specimens is a perfect roll of papyrus taken from a mummy; it is about nine inches in width, and probably twelve feet in length: the writing is as fresh as when inscribed.

the deceased had resolved to have all he possessed deposited along with him. The most singular among these things are the ornaments, in particular the small works in clay and other composition. I have been fortunate enough to find many specimens of their manufactures, among which is leaf gold, beaten nearly as thin as ours. The gold appears to me extremely pure, and of a finer colour than is generally seen in our own. It is somewhat singular that no instruments of war are found in these places, when we consider what a warlike nation the Egyptians were. What has become of their weapons I cannot conjecture; for in all my researches I found only one arrow, two feet long. At one extremity it had a copper point well fixed in it, and at the other a notch as usual to receive the string of the bow: it had been evidently split by the string, and glued together again.

"Among other articles too numerous to be mentioned, the beetle, or scarabæus, to all appearance a highly sacred animal, is found in the tombs. There are various sorts; some of basalt, verde antico, or other stones, and some of baked clay. They are scarce, particularly those with hieroglyphics on them, which no doubt contain some particular prayers, or the commemoration of striking events in the life of the deceased."

Lord Belmore has more than a hundred of these beetles; some of them in baked clay glazed and coloured more vividly than the highest modern porcelain. Fine linen; leather tanned, stained, and embossed; coarse glass; beads of various sorts; enamelling; gilding of wonderful brilliancy and beauty; copper cast in sheets; a metallic composition like lead, but more tenacious, and similar to that on tea-chests; and silver ornaments (though rare) are among the materials enumerated by Belzoni, as found in the tombs and mummy pits. Precious stones are also obtained from them; and sculpture executed on four sorts of stone, the sandy, the calcareous, breccia, and granite. The author asserts that the Egyptians also understood and practised the turning of arches; but it does not seem to us that his reasoning is conclusive on this question. Nor are his conjectures on matters which require learning worthy of having much weight attached to them: respecting what he has explored and seen we are disposed to give him every credit; but it is evident that he is destitute of those deep endowments which are indispensable to a just critical appreciation of doubtful antiquities. We therefore pass the more willingly from his conjectures to his picture of the Troglodytes of the Sepulchres.

"Their dwelling is generally in the passages between the first and second entrance into a tomb. The walls and the roof are as black as any chimney. The inner door is closed up with mud, except a small aperture sufficient for a man to crawl through. Within this place the sheep are kept at night, and occasionally accompany their masters in their vocal concert. Over the doorway there are always some half-broken Egyptian figures, and the two foxes, the usual guardians of burial-places. A small lamp, kept alive by

fat from the sheep, or rancid oil, is placed in a niche in the wall, and a mat is spread on the ground; and this formed the grand divan wherever I was. There the people assembled round me, their conversation turning wholly on antiquities. Such a one had found such a thing, and another had discovered a tomb. Various articles were brought to sell to me, and sometimes I had reason to rejoice at having stayed there. I was sure of a supper of milk and bread served in a wooden bowl; but whenever they supposed I should stay all night, they always killed a couple of fowls for me, which were baked in a small oven heated with pieces of mummy cases, and sometimes with the bones and rags of the mummies themselves. It is no uncommon thing to sit down near fragments of bones; hands, feet, or skulls are often in the way; for these people are so accustomed to be among the mummies, that they think no more of sitting on them, than on the skins of their dead calves. I also became indifferent about them at last, and would have slept in a mummy pit as readily as out of it."

Here they appear to be contented.

"The labourer comes home in the evening, seats himself near his cave, smokes his pipe with his companions, and talks of the last inundation of the Nile, its products, and what the ensuing season is likely to be. His old wife brings him the usual bowl of lentils and bread moistened with water and salt, and when she can add a little butter it is a feast. Knowing nothing beyond this he is happy. The young man's business is to accumulate the amazing sum of a hundred piastres (two pounds and ten shillings) to buy himself a wife, and to make a feast on the wedding day. If he have any children, they want no clothing: he leaves them to themselves till mother nature pleases to teach them to work, to gain money enough to buy a shirt or some other rag to cover themselves; for while they are children they are generally naked or covered with rags. The parents are roguishly cunning, and the children are schooled by their example, so that it becomes a matter of course to cheat strangers. Would any one believe, that in such a state of life luxury and ambition exist? If any woman be destitute of jewels, she is poor, and looks with envy on one more fortunate than herself, who perhaps has the worth of half-a-crown round her neck; and she who has a few glass beads, or some sort of coarse coral, a couple of silver brooches, or rings at her arms and legs, is considered as truly rich and great. Some of them are as complete coquettes, in their way, as any to be seen in the capitals of Europe."

"When a young man wants to marry, he goes to the father of the intended bride, and agrees with him what he is to pay for her. This being settled, so much money is to be spent on the wedding-day feast. To set up house-keeping nothing is requisite but two or three earthen pots, a stone to grind meal, and a mat, which is the bed. The spouse has a gown and jewels of her own; and, if the bridegroom present her with a pair of bracelets of silver, ivory, or glass, she is happy and fortunate indeed. The house is

ready without rent or taxes. No rain can pass through the roof; and there is no door, for there is no want of one, as there is nothing to lose. They make a kind of box of clay and straw, which, after two or three days' exposure to the sun, becomes quite hard. It is fixed on a stand, an aperture is left to put all their precious things into it, and a piece of mummy case forms the door. If the house does not please them, they walk out and enter another, as there are several hundreds at their command; I might say several thousands, but they are not all fit to receive inhabitants."

From Carnak part of a colossal statue of red granite was carried to the boat at Luxor. An altar with six divinities in alto relievo from a temple at the same place, and a number of other antiquities, were also removed. Mr. Belzoni, after enumerating these articles and dilating on his trouble in securing them, goes into a long trade upon his disputes with the French agents, which appears to me to be much misplaced in his volume; but exceeded in impropriety by the manner in which he treats Mr. Salt, without whose assistance it does not seem at all probable that he could have moved a single step, or made one effectual discovery. We are sorry to say this of a person of so much ardour and enterprise; but it is as impossible in justice to speak otherwise, as to fancy that a traveller in the author's circumstances could have done any thing in such a country as Egypt through his own means and influence. It therefore looks like ingratitude to insinuate even in the slightest degree, any censure upon Mr. Salt, to whom we must think Mr. Belzoni indebted for the foundation of all his achievements.

As nothing more, however, remained to be done near Thebes, in consequence, as is alleged, of the intrigues of the French and the want of support, our author on the 23d of May, set out for Assuan. Thence he went to Philæ, and hastily surveyed the ruins on that island, which he refers to the latest Egyptian era. Mr. Salt having advanced the necessary money, he next proceeded to open the temple at Ybsambul. On his way he was joined by Captains Ibray and Mangles, and the party together celebrated the King's birth day, to the great dismay of the natives round about, who could not conceive that so much powder as they fired off was expended without bloodshed and slaughter.

After overcoming excessive difficulties, in removing the accumulated sand of ages from the temple at Ybsambul: "on the first of August," says Mr. Belzoni, "we entered the finest and most extensive excavation in Nubia, one that can stand a competition with any in Egypt, except the tomb newly discovered in Behan el Malook.

"From what we could perceive at the first view, it was evidently a very large place; but our astonishment increased, when we found it to be one of the most magnificent of temples, enriched with beautiful intaglios, painting, colossal figures, &c. We entered at first into a large pronaos, fifty-seven feet long and fifty-two wide, supported by two rows of square pillars, in a line from the

front door to the door of the sekos. Each pillar has a figure, not unlike those at Medinet Ahoos, finely executed, and very little injured by time. The tops of their turbans reach the ceiling, which is about thirty feet high: the pillars are five feet and a half square. Both these and the walls are covered with beautiful hieroglyphics, the style of which is somewhat superior, or at least bolder, than that of any others in Egypt, not only in the workmanship, but also in the subjects. They exhibit battles, storming of castles, triumphs over the Ethiopians, sacrifices, &c. In some places is to be seen the same hero as at Medinet Ahoos, but in a different posture. Some of the columns are much injured by the close and heated atmosphere, the temperature of which was so hot, that the thermometer must have risen to above a hundred and thirty degrees. The second hall is about twenty-two feet high, thirty-seven wide, and twenty-five and a half long. It contains four pillars about four feet square; and the walls of this also are covered with fine hieroglyphics in pretty good preservation. Beyond this is a shorter chamber, thirty-seven feet wide, in which is the entrance into the sanctuary. At each end of this chamber is a door, leading into smaller chambers in the same direction with the sanctuary, each eight feet by seven. The sanctuary is twenty-three feet and a half long, and twelve feet wide. It contains a pedestal in the centre, and at the end four colossal sitting figures, the heads of which are in good preservation, not having been injured by violence. On the right side of this great hall, entering into the temple, are two doors, at a short distance from each other, which lead into two long separate rooms, the first thirty-eight feet ten inches in length, and eleven feet five inches wide; the other forty-eight feet seven inches, by thirteen feet three. At the end of the first are several unfinished hieroglyphics, of which some, though merely sketched, give fine ideas of their manner of drawing. At the lateral corners of the entrance into the second chamber from the great hall is a door, each of which leads into a small chamber twenty-two feet six inches long, and ten feet wide. Each of these rooms has two doors leading into two other chambers, forty-three feet in length, and ten feet eleven inches wide. There are two benches in them, apparently to sit on. The most subjects in this temple are, 1st. a group of captive Ethiopians, in the western corner of the great hall: 2nd. the hero killing a man with his spear, another lying slain under his feet, on the same western wall: 3d. the storming of a castle, in the western corner from the front door. The outside of this temple is magnificent. It is a hundred and seventeen feet wide, and eighty-six feet high; the height from the top of the cornice to the top of the door being sixty-six feet six inches, and the height of the door twenty feet. There are four enormous sitting colossi, the largest in Egypt or Nubia, except the great Sphinx at the pyramids, to which they approach in the proportion of near two-thirds. From the shoulder to the elbow they measure fifteen feet six inches; the ears three feet six

inches; the face seven feet; the beard five feet six inches; across the shoulders twenty-five feet four inches; their height is about fifty-one feet, not including the caps, which are about fourteen feet. There are only two of these colossi in sight, one is still buried under the sand, and the other, which is near the door, is half fallen down, and buried also. On the top of the door is a colossal figure of Osiris twenty feet high, with two colossal hieroglyphic figures, one on each side, looking towards it. On the top of the temple is a cornice with hieroglyphics, a torus, and frieze under it. The cornice is six feet wide, the frieze is four feet. Above the cornice is a row of sitting wonkeys eight feet high, and six across the shoulders. They are twenty-one in number. This temple was nearly two-thirds buried under the sand, of which we removed thirty-one feet before we came to the upper part of the door. It must have had a very fine landing-place, which is now totally buried under the sand. It is the last and largest temple excavated in the solid rock in Nubia or Egypt, except the new tomb. It took twenty-two days to open it, besides six days last year. We sometimes had eighty men at work, and sometimes only our own personal exertions, the party consisting of Mr. Beechey, Captains Irby and Mangles, myself, two servants, and the crew, eleven in all, and three boys. It is situated under a rock about a hundred feet above the Nile, facing the south-east by east, and about one day and a half's journey from the second catenat in Nubia, or Wady Halfa.

"The heat was so great in the interior of the temple, that it scarcely permitted us to take any drawings, as the perspiration from our hands soon rendered the paper quite wet. Accordingly, we left this operation to succeeding travellers, who may set about it with more convenience than we could, as the place will become cooler. Our stock of provision was so reduced, that the only food we had for the last six days was dhourra, boiled in water without salt, of which we had none left."

On the 4th of August they quitted this interesting spot, and sailed rapidly down the Nile, now at its height.

#### MYTHOLOGY OF AMERICAN INDIANS.

(From *Hoeckwelder's Memoir, in the Transactions of the American Phil. Soc.*)

It is a curious fact, that the American Indians practise the same sort of visionary and supernatural initiation of *all* boys which Eggedo so interestingly describes as the process by which the Greenlanders prepare their Angekoks, or Sorcerers. Concluding this subject the author says, "I once took great pains to dissuade from these notions a very sensible Indian, much esteemed by all who knew him, even among the whites. All that I could say or urge was not able to convince him that at the time of his initiation (as I call it) his mind was in a state of temporary derangement. He declared that he had a clear recollection of the dreams and visions that occurred to him at the time, and was sure that they came from the agency

of celestial spirits. He asserted very strongly, of his own supernatural knowledge, which he had obtained not only at the time of his initiation, but at other times, even before he was born. He said he knew he had lived through two generations; that he had died twice and was born a third time, to live out the then present race, after which he was to die and never more to come to this country again. He well remembered that the women had predicted while he was yet in his mother's womb; some had foretold that he would be a boy, and others a girl, he had distinctly overheard their discourse, and could repeat correctly every thing they had said. It would be too long to relate all the wild stories of the same kind which this otherwise intelligent Indian said of himself, with a tone and manner which indicated the most intimate conviction, and left no doubt in my mind that he did not mean to deceive others, but was himself deceived.

"I have known several other Indians who firmly believed that they knew, by means of these visions, what was to become of them when they should die, how their souls were to retire from their bodies and take their abodes into those of infants yet unborn; in short, there is nothing so wild and so extraordinary that they will not imagine and to which, when once it has taken hold of their imagination, they will not give full credit."

"The Indians consider the earth as their universal mother. They believe that they were created within its bosom, where for a long time they had their abodes, before they came to live on its surface."

"The Indian Mythologists are not agreed as to the form under which they existed while in the bowels of the earth. Some assert that they lived there in the human shape, while others, with greater consistency, contend that their existence was in the form of certain terrestrial animals, such as the ground-hog, the rabbit, and the tortoise. This was their state of preparation, and they were permitted to come out and take their station on this island as the Lords of the rest of the Creation."

"Among the Delawares, those of the *Minsi*, or Wolf tribe, say that in the beginning, they dwelt in the earth under a lake, and were fortunately extricated from the unpleasant abode by the discovery which one of their men made of a hole, through which he ascended to the surface; on which, as he was walking, he found a deer, which he carried back with him into his subterranean habitation; that there the deer was killed, and he and his companions found the news so good, that they unanimously determined to leave their dark abode, and remove to a place where they could enjoy the light of heaven and have such excellent game as abundance."

"The other two tribes, the *Unami* or Tortoise, and the *Unalakchiga* or Turkey, have much similar notions, but reject the story of the lake, which seems peculiar to the *Minsi* tribe.

"These notions must be very far extended

among the Indians of North America generally, since we find that they prevail also among the Iroquois, a nation so opposed to the Delawares, and whose language is so different from theirs, that not two words, perhaps, similar or even analogous of signification may be found alike in both."

The Indians, combined with this mythology, have from the earliest times considered themselves as connected with certain animals, either as friends or foes. "The Tortoise, or as it is commonly called, the *Turtle* ribe, among the Lenape, claims a superiority and ascendancy over the others, because of their relation, the great Tortoise, a fabled monster, the Atlas of their mythology, bears according to their traditions this great island on his back, and also because he is amphibious, and can live both on land and in the water, which neither of the heads of the other tribe can do. The merits of the *Turkey*, which gives its name to the second tribe, is that he is stationary, and always remains with or about them. As to the *Wolf*, after whom the third tribe is named, he is a rambler by nature, running from one place to another in quest of his prey; yet they consider him as their benefactor, as it was by his means that the Indians got out of the interior of the earth. It was he, they believe, who by the appointment of the Great Spirit, killed the deer whom the Monsey found who first discovered the way to the surface of the earth, and which allured them to come out of their damp and dark residence. For that reason, the wolf is to be honoured, and his name preserved for ever among them."

All savage beasts are looked upon as enemies, though one tribe respects the Rattlesnake, which it calls 'grandfather.' The following story will show that the bear is not a equal reptile.

"A Delaware hunter once shot a huge bear and broke its back bone. The animal fell and set up a most plaintive cry, something like that of the panther when he is hungry. The hunter, instead of giving him another shot, stood up close to him, and addressed him in these words: 'Hark ye! bear; you are a coward, and no warrior as you pretend to be. Were you a warrior, you would show it by your firmness, and not cry and whimper like an old woman. You now, bear, that our tribes are at war with each other, and that yours was the aggressor.' You have found the Indians too powerful for you, and you have gone sneaking about in the woods, stealing their hogs; perhaps at this time you have hog's flesh in your belly. Had you conquered me, I would have been with courage and died like a brave warrior; but you, bear, sit here and cry, and disgrace your tribe by your cowardly conduct." I was present (says the author) at the delivery of this curious

\* Probably alluding to a tradition which the Indians have of a very ferocious kind of bear, called the *naked bear*, which they say once existed, but was totally destroyed by their ancestors. The last was killed in the New York state, at a place they called *Hoonick*, which means the *Danin*, or more properly the *Kettic*.

infective; when the hunter had despatched the bear, I asked him how he thought that poor animal could understand what he said to it? 'Oh!' said he in answer, 'the bear understood me very well; did you not observe how *ashamed* he looked while I was upbraiding him?'

Among the miscellaneous traits related by the author, we find the following.

"Though the Indian is naturally serious, he does not dislike a jest on proper occasions, and will, sometimes even descend to a pun. Once at a dinner given at Marietta by the late colonel Sproat, to a number of gentlemen and Indian chiefs of various tribes, a Delaware chief, named George Washington, asked me what the name of our good friend, the Colonel, meant in the Lenape language? It should be observed that Colonel Sproat was remarkably tall. I told him that *Sproat* (for so the name is pronounced) meant in English a shoot, or twig of a tree. 'No, no,' replied the Indian, 'no shoot or twig, but the *tree* itself.'"

"An Indian who spoke good English, came one day to a house where I was on business, and desired me to ask a man who was there and who owed him some money, to give an order in writing for him to get a little salt at the store, which he would take in part payment of his debt. The man, after reproving the Indian for speaking through an interpreter when he could speak such good English, told him that he must call again in an hour's time, for he was then too much engaged. The Indian went out and returned at the appointed time, when he was put off again for another hour, and when he came the third time, the other told him he was still engaged and he must come again in half an hour. My Indian friend's patience was now exhausted, he turned to me and addressed me thus in his own language: 'Tell this man,' said he, 'that while I have been waiting for his convenience to give me an order for a little salt, I have had time to think a great deal. I thought that when we Indians want any thing of one another, we serve each other on the spot, or if we cannot, we say so at once, but we never say to any one 'call again! call again! call again! three times call again!' Therefore when this man put me off in this manner, I thought that, to be sure, the white people were very ingenious, and probably he was able to do what no body else could. I thought that as it was afternoon when I first came, and he knew I had seven miles to walk to reach my camp, he had it in his power to stop the sun in its course, until it suited him to give me the order that I wanted for a little salt. So thought I, I shall still have day light enough, I shall reach my camp before night, and shall not be obliged to walk in the dark, at the risk of falling and hurting myself by the way. But when I saw that the sun did not wait for him, and I had at least to walk seven miles in an obscure night, I thought then, that it would be better if the white people were to learn something of the Indians.'"

## STATISTICS OF EUROPE.

In a statistical work lately published in France, we find a view of the principal powers of Europe with respect to their population, their revenue, and their debt, of which the following is an extract:

FRANCE.—Population 29 millions. Revenue 866 millions (francs). National debt 3 milliards 466 millions, or four times its revenue.

AUSTRIA.—Population 28 millions. Revenue 300 millions. Debt 900 millions, or three times its revenue.

SPAIN (in Europe).—Population 17 millions (13 millions in the colonies). Revenue 160 millions. Debt 3 milliards, or nineteen times its revenue.

GREAT BRITAIN.—Population, in Europe, 17 millions; in Asia, 60; in America, 1 million. Total of the population under the English dominion, 68 millions. Revenue 1 milliard 156 millions. Debt 19 milliards, or eighteen times its revenue.

NETHERLANDS (including the colonies).—Population 6 millions. Revenue 166 millions. Debt 3 milliards and a half, or twenty times its revenue.

PRUSSIA.—Population 11 millions. Revenue 170 millions. Debt 676 millions, or four times its revenue.

RUSSIA (including Poland).—Population 52 millions. Revenue 350 millions. Debt 600 millions, or nearly twice its revenue.

UNITED STATES OF AMERICA.—Population 12 millions. Revenue 130 millions. Debt 463 millions, or three times its revenue. The author draws the following conclusions:

1. The debts of all the states absorb a part of their revenues, which makes them unable to meet extraordinary and unforeseen expenses, without having recourse to new loans, and consequently to the capitalists—a new power, whose sceptre sways more or less over the whole universe.

2. The powers, or rather the nations, which have attained to the highest degree of civilization, industry, and commerce, are necessarily in a state of comparative decay, with respect to those nations which have yet to advance in any of these three respects. After they have attained their meridian height they can only decline, while others continue to rise.

3. As long wars and foreign enterprises can no longer be undertaken without credit, they become impossible for a government which has none, or has lost it; which explains how modern projects remain unexecuted.

4. England owes nineteen milliards, or eighteen times its revenue; but she is mistress of the commerce of the world; and supposing that she should one day lose it, yet the capitalists, depending on her power, think they may still venture for a long time to risk with her the most extensive speculations.

Austria is poor in money; her maritime commerce is still in its infancy; her continental power constitutes her whole strength, and suffices to preserve herself. Will it suffice her for external enterprises?

Among the great powers, France is that which owes the least; gold abounds there; her bankers take part in foreign loans; her debt decreases progressively; to resume the rank which belongs to her, she has only to proceed upon a judicious plan and with a firm step in the road of the constitutional monarchy, the principles of which completely consolidated and sincerely followed, are the only guarantee of public credit.

We may add, that Spain, so loaded with debts and at war with her colonies, finds every where abroad a credit which she could not have obtained a year ago. It is because in European Spain, restored to a free government, agriculture, industry, and commerce, will rise from their state of lethargy, and capitalists have reckoned on the rapid development of these three sources of national wealth and prosperity.

## ORIGINAL CORRESPONDENCE.

### THE SIEGE OF BELGRADE.

Addressed to the Admirers of Alliteration, and the Advocates for Noisy Numbers. (1)

Ardentem Aspicio Atque Anectis Auribus Asto.  
V'rgil.

An Austrian army, awfully arrayed, (2)  
Boldly by battery besieged Belgrade: (3)

(1) Alliteration, or Pseudo-Rhythm, as it is termed by Dr. Hickes and Wormius, was the earliest species of harmony known in this country, and preceded the positive invention of Rhythm. It originated with the Skalds or old Danish poets, in their Drotquet, or vulgar song, and was copied by the Anglo-Saxons both before and after the coming of the Danes. Robert Crowley, who printed the first edition of Pierce Plowman's Vision, in 1550 (erroneously dated 1505), says that the author, Robert Langland, "wrote altogether in meter, but not after the manner of our rhymes that write now-a-days, for his verses end not alike; the nature of his meter is to have at least three words in every verse which begin with the same letter." Besides this information, the division of the lives in Pierce Plowman's Visions, evidently denotes that this species of composition was considered in many respects as rhythm, and employed as such by many of the Anglo-Saxon Poets. In the Cotton Library there are two volumes of ancient English poetry, entirely written in this metre. In the beginning of the sixteenth century, this kind of versification began to assume a new form, and rhymes at the end of the couplet were introduced, in addition to the usual system of alliteration (see the old song of "Little John Nobody.") It however was discontinued towards the end of the sixteenth century, although many of our greatest poets seem occasionally to have practised it, with great judgment and advantage. If not pursued to a ridiculous excess, it must be admitted that it creates a sort of adventitious strength in poetry, which no force of imagination or depth of feeling could possibly effect without it. Dryden is full of alliterative lines. Milton sometimes condescended to introduce (although sparingly) this grace into his versification; and Lord Byron, in our own day, has carried his admiration of it, in some instances, to excess. It is most certain, that much of the power and energy for which his poetry is so remarkable, may be referred to

Cossack commanders cannonading come, (4)  
Dealing destruction's devastating doom. (5)  
Every endeavour engineers essay, (6)  
For fame, for fortune fighting—furious fray! (7)  
Generals 'gainst generals grapple,—gracious  
G—d! (8)  
How honest Heaven heroic hardihood! (9)  
Infuriate—indiscriminate in ill—  
Kinsmen kill kindred, kindred kinsmen kill! (10)  
Labour low levels loftiest, longest lines, (11)  
Men march 'mid mounds, 'mid moles, 'mid murderous mines! (12)

this simple origin. Chaucer, although he sneered at alliteration in the lines commencing

'I am a Sotheire man,  
I canot geste, rom, ram, raf by my letter,'  
very frequently adopts it. But we have already very much exceeded the limits of a note on this subject.

(2) Of adamant, and as a centre firm.

Milton's P. L.

Jul. Capitolinus relates that the young Emperor Antoninus Geta, on a particular occasion, ordered an alliterative dinner, viz. a repast composed of dishes the names of which all began with the same letter. But as the passage is curious, and not long, we will transcribe it. "Habebat etiam, istam consuetudinem, ut convivia et maxima prandia per singulas litteras haberet, scintibus servis, velut in quo erat asser, aprugna asca; item pullus, perdris, pavo, porcellus, picia, perna, et que in eam literam generis edulium cederent; et item fasianus, farta, fecas, et talia."

(3) A bold, bad, blundering, blustering, bloody booby.—Attorney on Lord Coddagen.

(4) Huberta Mink, who flourished in the 10th century, wrote a poem consisting of 300 hexameter verses in praise of buildings, every line of which began with e. He addressed the book to Charles the Bald, or Carolus Calvus, the Emperor. It began as nearly as we can recollect, for we have no means of reference to the volume itself, as follows:

Carmina clariorum calvis cantate Cameris  
Comere condonare conabor carmine calvis, &c.  
And Clowns come crowding on, with cudgels armed.—Dryden's Pal. & Tr.

(5) And downwards with diffusive good descends.—Dryden, on Mrs. Anna Killigrew.  
Driving sleets deform the day delightful.

Thomson's Spring.

Now die, die, die, die, die.  
(6) That Europe's lands shall earnestly be wrought,  
And earnest eye shall not last for ever.

Pierce Plowman's Prophecy of Bede.

(7) Beauty plays  
Her idle frocks from family diffused  
To family, as flies the father dust.

Thomson's Spring.

Fallen, fallen, fallen, fallen,  
Fallen from his high estate.

Dryden's Ode on Music.

(8) For by thy gracious, golden, glittering gleams,  
Glide glaring ghastly through the gloom.

Shakespeare.

(9) ————— they waste their skill  
On high Aug signs, and earth of homely Ave.

Philips' Fall of Chloë's Jordan.

(10) Brave banish beaux, and coaches coaches drive.  
(11) He flies a lifeless load along the land.

Pope's Rape of the Lock.

Who looked like Lent, and had the body lean.  
Dryden's Cock and the Fox.

Now noisy noxious numbers notice sought  
Of outward obstacles, opposing ought.  
Poor patriots!—partly purchased, partly pressed,—  
(13) Quite quaking, quickly "Quarter! quarter!"  
'quest, (14)  
Reason returns, religious right redounds, (15)  
Swarrow stops such sanguinary sounds. (16)

(12) Upon cost, more care, and most efficacious.

Dryden's Theodores and Hectors.

(13) At the conclusion of a volume of Spectator, entitled, *Nugæ Venales*, published at Amsterdam in 1648, is to be found one of the most whimsical alliterative productions we ever met with, viz. a poem of several hundred lines—*"Paragus Porcorum per P. Porcium, Porcum, Porcum pro Protore."* It consists chiefly of a satirical jumble of words aimed at the intolerance of the monks of that period, all of which however begin with the letter P. It would appear from the Amphitheatrum Sapientie Sematicæ of Dornavius, that Petrus Porcius was only a name of guerre. The author's name was Petrus Placentinus. A German writer, who had the impudence to publish this *jeu d'esprit* to his own, although it was known to be in existence at least a century before he was born. The sort of plunder is common among the German Gropiuses. We quote the first lines of the poem. It is an abundantly curious piece of trifling.

Plaudite porcelli, porcorum pictura prope  
Progneditur plures porci pingue ducit  
Pugnantibus pergit, pœdum pars propositum  
Perthabit pœd petrosas plerumque plures.  
Pars portentose populorum prelo prelo.  
Pars punit populo potes, pars pernam plagis

Prætedit punire pares, prostrare parvos, &c.

Addition mentions, in No. 59 of the Spectator, one Tryphonodon, who composed an Odyssey on the adventures of Ulysses, consisting of four and twenty books, having entirely banished the letter A from his first book, which he calls Alpha, the letter B from his second, which he names Beta, for the same reason; and proceeds, in a similar manner, with all the others. We have somewhere seen a hymn to the Virgin Mary, in Latin hexameters, which occupied upwards of six pages, although it consisted only of clappers upon the following eight words:

Tot tibi sunt Virgo dotes, quot sidera cœli.

But we are falling into precisely the error we have been deprecating in this poem; and shall accordingly close it. What Morda has said on the subject may be attended to with advantage.

Turpe est difficile habere sagus,  
Et stultus labor inaptissimus.

Whilst we are at the letter p however, it must not omit to remind our readers of the alliterative death of the Pippin women in *Orphic Trivia*, who retained her taste for this sort of versification some minutes after her last nose severed from her body.

Pippins, ascried, but death her voice o'erwhelm'd,  
And pip-pip-pip along the ice recumb'd.

(14) Quail crush, conclude, and pull.  
(15) Rough repetition roars in robust strains.

(16) Which stir too strongly the soul's rest springs.

Lord Byron

ruce to thee, Turkey!—Triumph to thy  
triumph, (17)  
'twas unjust, unmerciful Ukraine! (18)  
'twas vain, vain victory! Vanish, victory vain! (19)  
'twas wish we warfare?—Wherefore welcome  
were (20)  
(ertes, Ximenes, Xanthus, Xavier?  
'twas yield, ye youths! Ye yeomen, yield your  
yield!  
Zeno's, Zampater's, Zoroaster's zeal,  
attracting all, arms against acts appeal!

## LITERATURE &amp; LEARNED SOCIETIES.

## NEW ROYAL LITERARY SOCIETY.

When we last week redeemed our promise  
to the public, of bringing before it the most  
'interesting literary subject of the present  
times," we did not imagine that any unau-  
thorized opinions of ours could have stirred  
up a spirit of detraction, if not of direct  
opposition, against this noble and beneficent  
design. It appears however, from a letter  
signed Alpha in the Morning Chronicle, that  
the constitutional principle of jealousy of the  
royal prerogative is extended from *politics*  
to *literature*! Alpha seems quite alarmed,  
at the king should become too popular and  
powerful by standing at the head of a Society  
"for the encouragement of indigent  
merit, and the promotion of general literature."  
He reviles this plan as "extra-  
ordinary," and he exaggerates "indigent merit"  
to a new form of "those who are in high  
places." It is a satisfactory matter, to find  
that a person of such potent abilities does  
not intend to crush the New Society in the  
egg by the weight of his genius: he only  
proposes to set up a rival establishment, to  
show that men of his own liberal way of  
hinking are as competent to write essays as  
he most loyal persons in Britain. We beg  
therefore to put him right on one point in  
which he seems to be mistaken. The royal  
ociety is not exclusive: it designates *those*  
*who* are "of distinguished learning, authors  
of some creditable work of literature, and  
men of good moral character," as eligible to  
become members; and we cannot guess what  
bjection Alpha has to these descriptions of  
persons. If the rival project embraces an  
opposite course, we shall see his establish-  
ment composed of ignorant persons, authors

Such sweet, such sad, such solemn airs.

Thomson's *Cas. of Indol.*

(17) Then we took down our tents that told  
a thousand.

Old *Ballad*, *Flodden Field*.

(18) Unheard, unhelped, unspitied, unlamented.  
Michael *Dryden's Heroical Epistles*.

Unwept, unobscured, and unsmug.

Scott.

(19) Neu patrie validas in viscera vertite rines.  
Which has been thus translated:  
found not with rigour vast the rituals of the  
weal!

(20) Where France will side to weaken us by  
war.

*Dryden's Annus Mir.*

Of wandering wain the white winged plover  
wheels.

Thomson's *Spring*.

of scandalous works, and men of immoral  
character; and such being the case, perhaps  
it will match the Homeric prize question, by  
one "on the state of religion, society, learn-  
ing, and the arts, during the period in  
which the events are laid of another great  
epic poem, namely, Milton's *Paradise Lost*!"

But it is truly a melancholy thing, that a  
design calculated to throw a lustre around  
the crown, to do incalculable benefit to the  
country, to bring light upon our age, and  
carry honour down to the latest posterity,  
should be made a matter of unreasonable  
and unworthy suspicion. Ever since we  
could conceive an idea, or hold a pen in the  
cause of literature, we have been impressed  
with the conviction that such an Institution  
as the one now forming, was alone necessary  
to upraise and consolidate the dearest in-  
terests of learning. It delights us to find it eman-  
ating from that high quarter, which has all  
the power and influence required to give it  
character, consistency, and vigour: and we  
trust it will be formed on a plan to unite all  
affects.

• Upon this topic, Mr. D'Israeli speaks our  
sentiments, in his *Essay on the Literary Character*.

## OXFORD, DEC. 9.

On Tuesday last the following Degrees  
were conferred:—

MASTERS OF ARTS.—REV. W. REES DA-  
VIES, Scholar of Worcester College; REV.  
Watts Wilkinson, Worcester Coll.; REV.  
W. Thursty, Oriel Coll.

BACHELORS OF ARTS.—G. Smalley, Esq.  
Trinity College, Grand Compounder; G.  
Howard Stapleton, Worcester Coll.; J. I.  
Monypenny, Wadham Coll.; Hender Moles-  
worth, Exeter Coll.; J. Parker and J. Sneyd,  
Brasenose Coll.; J. H. Newman, and F.  
Neale, Trinity Coll.; Hon. A. P. Perceval,  
Oriel Coll.; T. Meyler, and R. Smith, Pem-  
broke Coll.; Edmund Robinson, and Cos-  
mo Nelson Innes, Balliol Coll.; F. W.  
Hope, Ch. Ch.; F. Roush, St. John's Coll.

## CAMBRIDGE, DEC. 1.

The Rev. Fenton Hort, of Trinity College,  
was on Friday admitted Master of Arts;  
and Mr. R. Partridge, of St. John's College,  
Bachelor of Arts.

The following gentlemen were yesterday  
admitted to the undermentioned degrees:—

DOCTORS IN DIVINITY.—The Rev. G.  
D'Oyley, of Corpus Christi College, and  
rector of Lambeth; Rev. J. T. Barrett, of St.  
Peter's College.

MASTERS OF ARTS.—J. Foster, and W.  
Hanson, of Queen's college.

BACHELORS IN CIVIL LAW.—G. Hole, of  
Trinity Coll.; G. Walsh Hallam, of Trinity  
Hall.

At the third Meeting of the Cambridge  
Philosophical Society for the present year,  
on Monday week, a further communication  
was made from Dr. Wavell of Barnstable,  
respecting the remarkable formation of *na-  
tive natron*, in the tower of Stoke Church,  
near Hartland, in Devonshire; accompanied  
by one of the stones of the tower. After-  
wards the Vice-President, Dr. Haviland, read  
an account of the dissection of a young man,

who died of fever; which was attended with  
a remarkable case of corrosion of the stomach,  
by means of the gastric fluid, after death.  
Professor Lee also read, from an Arabian  
author of the name of *Nassir-eddin*, a very  
curious demonstration of the doctrine of pa-  
rallel lines.

*Cambridge Observatory.*—The members  
of the *Observatory Syndicate* have made a  
report of their proceedings to the senate,  
recommending a field, near the gravel-pits  
on the north of the Madingley road, as fur-  
nishing the most eligible site for an Observa-  
tory; which selection of the syndicate has  
been approved by the senate, and the syndics  
are now endeavouring to ascertain the pre-  
cise spot for the building, which may have  
the advantage of a very distant meridian  
mark, on the tower, if possible, or on some  
part of Grantchester church.

The Syndics have already ordered astron-  
omical instruments to the amount of near  
2,300*l*.

The present subscriptions amount to up-  
wards of 6,000*l*. exclusive of the 5,000*l*.  
which was voted by the University.

## FINE ARTS.

ROYAL ACADEMY. Last week the Royal  
Academy lecture room was distinguished,  
(the fashion spreading from theatres and pub-  
lic meetings has at length got to churches  
and grave institutions), by a riot. It is said  
that the lecturer got two stout life-guard-  
men to exhibit or spar for the instruction of  
the pupils in muscular action; but this show  
was so nearly allied to a turn up at the Fives  
Court, that it attracted an unusual number  
of visitors. As all could not be accommo-  
dated, a scene of disgraceful struggle ensued,  
and the theatre of a polite art was converted  
into a bear garden.

## ORIGINAL POETRY.

[By Correspondents.]

To the Editor of the *Literary Gazette*.

Having shown proper respect to yourself and  
the public by steering clear of the angry vitu-  
peration of rival periodicals works, and taking  
no notice of the venomous attacks which origi-  
nate in Editorial bosoms against Editors, and  
are futilized—

"Not that they write so ill, but sell so well;  
I trust you will admit the enclosed *jeu d'esprit*  
as no material departure from the praiseworthy  
system upon which you have acted. Continue,  
sir, to struggle for eminence as you have done,  
by being the first in the race of useful infor-  
mation and delightful literature, and you may sa-  
fely leave it to any of your contemporaries to try  
to raise themselves into notice by malignant per-  
sonalities and scurrilous abuse."

Your friend and constant reader,

RIVAL WRITERS.

Quoth Ding to Dong,  
You write quite wrong;

• We generally erase those passages in cor-  
respondents' letters which speak flatteringly of  
the *Literary Gazette*; but the above is so agree-

Quoth Dong to Ding,  
You lie, you Thing!  
Ding dong; dong ding!

You went stand long,  
Quoth Ding to Dong;  
I will, by jing!  
Spite of thee, Ding!

Ding dong; dong ding  
How vile his song!  
(ries Ding of Dong.  
Ding cannot sing!  
Cries Dong of Ding.

Ding dong; dong ding.  
'Gaiest I'm strong!  
Says Ding to Dong:  
Thou'rt but a Ninc-  
umpoop, fool Ding!

Ding dong; dong ding.  
I'll lay my thong,  
Hawls Ding, on Dong;  
The nose I'll wring,  
Shouts Dong, of Ding.

Ding dong; dong ding.  
Fool knaves among  
The first is Dong:  
No rogue a string  
Deserves like Ding.

Ding dong; dong ding.  
Thus like a gong  
Thumps Ding at Dong;  
And retorts ring  
At Dong from Ding.

Ding dong; dong ding.  
Meanwhile the throng  
Cares nought for Dong;  
The draws of Ding  
No readers bring.

Ding dong; dong ding;  
Dong ding; dong ding.

TOM BELL,  
Late of Lincoln.

St. Dunstan's Clock, the shortest  
day in the year 1820.

#### THE SLEEPERS.

Written in the Sleeping Room of — Academy.

It's silent influence Sleep has shed  
On every little thoughtless head;  
The house is free from noise:  
Their troubles for the day are o'er,  
The tyranny of tasks no more  
Their lightened breasts annoy.

They suffer now their daily death:  
Around is heard the long-drawn breath,  
The heaving coverings rise:  
But yet perhaps each playful brain  
May some strange phantasy contain,  
A favorite sport that pleases.

This runs a race, perhaps, and that  
As earnest grasps the shadowy bat,  
And strikes the airy ball;  
While this, perchance, the fag or scout,  
Unheard is crying, "Put him out!"  
As loud as he can bawl.

The next with open mouth who lies,  
In broken accents stammering tries  
To prove he'll be obeyed;  
This, who in fight his strength may try,

able to our sense of right that we have suffered  
it to remain. It is indeed a sure sign that all  
the better means of attaining popularity are dis-  
regarded, or have failed, when periodical writers  
find no other way to attract notice but by abus-  
ing their contemporaries. En.

Of crimsoned nose or purpled eye  
Will waken half afraid.

Oh! happy souls! Oh! trebly hiest!  
Who thus enjoy a sportive rest,  
By watchful care uncheck'd;  
Whose grief, awake, is but the shower  
That gently bends the tender flower,  
But leaves it more erect.

Der. 8.

LE PREMIER.

#### SONG.

Love is a little runaway,  
That makes each heart his home;  
And when he's had his fun, away  
He flies elsewhere to roam.  
The mansion where his tricks he's played  
Must soon to ruin fall;  
By Love left uninhabited,  
'Tis nothing worth at all.  
If he should take possession,  
Eliza, of thy bosom,  
Trust not each fair profession,  
But chain him, or you lose him.  
Let prudency bar the window,  
And modesty the door;  
Inconstancy to hinder,  
'Tis best to make things sure.

Solo.

J. W.

#### TO A PHYSICIAN WHO TRAGEDYZETH.

Most sapient Doctor, thou dost stand alone  
For killing men in fancy and in fact;  
For though thy muse crowds all her deaths in one,  
Thy physic's *Drama* slays in every act!  
Let me conjure thee by his honoured name,  
(At once the god of medicine and of verse)  
If not quite callous to the voice of shame,  
No longer plays so fatal to *rehearse*;  
For wielding thus a double bolt of thunder,  
Even though we 'scape your muse's "worst  
of ills,"

To *Physic* we must speedily knock under—  
Swallow your verse, or bolt your poisonous  
pills!

Forbear—or all the patients you most prize  
Will die—with laughing at your tragedies!

ABEL DRUGGER.

#### On Time.

To charm's a gift that's always new,  
A bloom that's never blighted;  
And alight's the injury Time can do  
Two hearts by love united.  
The rose that blossoms at mid-day  
Is still at eve worth prizing,  
As rainbows catch a gilded ray  
From Sol's decline or rising.

#### SKETCHES OF SOCIETY.

LETTERS FROM PARIS.—NO. VI.

Paris, Dec. 10, 1820.

A society of learned Benedictines formerly wrote a history of Paris, in huge folio volumes; but now-a-days, the French regard folio volumes with horror. Even the quartos, so much in fashion in England, are not relished in France; and all publications are reduced to 8vo., 12mo., or even to 18mo. Didot has lately printed a charming Virgil in 24mo; but unfortunately, it requires the eyes of a lynx to read it. A *History of Paris*, in 8vo. has lately been commenced. It will possess the advantage of being written in a

spirit of philosophy which the worthy Benedictines, before mentioned, probably never dreamed of. This new history is by M. Dulaure, who was originally a curate, but who, during the revolution, seized the opportunity of throwing aside his ecclesiastical robe and getting married. This, to be sure, was only acting in conformity to the laws and customs of the times; but he also had a seat in the national convention, and therefore has eternally to reproach himself with having voted for the death of the unfortunate Louis XVI. M. Dulaure has deeply studied the ancient history of France; and has arranged himself of all the monuments of antiquity which France still retains, to elucidate facts, and to refute the fables and false assertions that have been circulated in previous histories of Paris. In those remote ages, when cities like individuals, laid claim to illustrious origin, search was made among the ancient heroes, for a founder of the city of Paris. It would appear that the original Parisians were a wretched Belgian horde, to whom the Gauls, out of mere pity, granted an asylum on the northern frontier of their territory; little suspecting that this people would one day exceed in wealth and glory the whole of Gaul. We should have known but little respecting the ancient religion of the Parisians, if there had not been discovered, a few centuries back, below the foundation of the cathedral of Notre-Dame, some stones belonging to an ancient altar, all the sides of which were adorned with bas-reliefs, representing deities, with their names inscribed in latin; these are partly local deities, though it is probable they were also worshipped in other parts of Gaul. An inscription on these stones, states that the altar was erected at the expense of the boatmen of Paris. The trade on the Seine must at that time have been more considerable than at present; for the boatmen of Paris are now poor enough, and have but little money to spare for the erection of altars or any other monument.

Paris contains but few traces of the Roman dominion, and these few belong to the close of the Empire. The principal monument is the edifice known by the name of *the Thermæ*. It is a vast, vaulted hall, which was originally attached to an Imperial Palace, now destroyed. Not long back, a cooper had converted this place into a warehouse for casks and tubs; but the government, at the solicitation of every friend of antiquity, at length resolved to purchase the edifice. The old houses, which surrounded and concealed it, are now pulling down, so that the building will be entirely clear, and may be viewed on all sides. It is probable that the bas-reliefs, above mentioned, and all other Parisian antiquities that may be collected, will be deposited within the building; and thus, every object it contains, will be antique. The construction of this palace is generally attributed to Julius Cæsar, who, as he himself relates, passed some time in Paris; but neither Cæsar, nor any other ancient author, says it was he who built the place. Julius Cæsar was an economical prince, an enemy to pomp; and besides he was not sufficiently settled in Paris to think of build-

of a palace. The new history of Paris attributes the erection of this edifice to Constantius Chlorus. It is gratifying to reflect that this remarkable monument, which has for a long period been in the possession of private individuals, has escaped destruction, while many antiquities of more recent date, are successively disappeared in the catastrophes of which Paris has been the theatre various periods. The *Therma* doubtless we their preservation to the solid style in which they are built, which has rendered them useful in modern times.

The early churches of Paris have all been destroyed; the revolution demolished most of them, or so completely changed their destination that they cannot now be recognized. They have in many instances been converted into theatres; and a few years ago, a play was performed at Strasburg, in a church which yet retained its steeple and burial-ground. Respecting the first introduction of Christianity in Paris, a whimsical discovery has been made in late times. According to an ancient tradition, founded on nobody knows what, St. Dennis, the Patron of France, was beheaded on Mont-Martre near Paris, and he carried his head under his arm as far as the city of St. Dennis. This story induced Madame de Cornuel, a woman of considerable wit, to say, "I do not see any miracle in his doing so far; in such a case, the first step is very thing (*il n'y a que le premier pas qui vaille*). The monks of St. Dennis, felt an interest in inducing people to put faith in this legend, and they showed the head of the saint to all who wished to see it; but it was not shown in Paris, and at four other places in France, and finally at Ratisbonne, in Germany. Thus there were no less than seven heads of St. Dennis. But unfortunately for the believers of miracles, it is positively known that St. Dennis was put to death and burnt in Greece, and that he never visited France. Many volumes were formerly written on this important subject, and the monks of St. Dennis stoutly defended their thesis up to the moment when all convents were suppressed throughout the kingdom. It is the festival of St. Dennis is celebrated in the vintage month, and as his name, in Latin *Dyonisius*, is one of the names of Bacchus, has been presumed, with some reason, that when Christianity was introduced in France, endeavours were made to give a Christian colouring to a pagan festival, which the people were in the habit of celebrating. In the little church in Paris, which stood in the centre of a vineyard, a festival was formerly held called *St. Bacchus*, a name for which would be vain to search legends and books of martyrs. These substitutions are not more astonishing than those which took place in Paris during the reign of terror, when Christian worship was abolished. The altars were suffered to remain, but upon them was placed a wheat-sheaf or an image of the goddess of Reason. Only a few years back, there was seen above the door of the Church of l'Oratoire, a picture which, before the revolution, represented a groupe of angels worshipping the Holy Sacrament; during the reign of terror, however, the Host was ef-

faced, and the republican fasces and the axe substituted in its stead, so that the angels were made to worship the fasces of the Jacobins.

The new historian of Paris makes a remark which seems to be confirmed by facts; namely, what a certain party in France styles the *good old time*, never did exist. The further back we go, the more we find people unhappy and institutions barbarous: it is only since a salutary reform has been introduced into civil and religious institutions, that mankind breathe, at least by intervals: for human passions unfortunately produce as much calamity in civilized society as among barbarians.

#### MAGNANIMITY REWARDED.

M. de Cortois was a very respectable clergyman, who endeavoured conscientiously to fulfil the duties of his profession. But he was a very handsome man, and in the prime of life, and was generally known in Paris by the name of "the Abbé with the handsome legs."

This agreeable outside was sufficient for the bishop of Mirepoix to form a very unfavourable opinion of him; and when he waited on him, he sought to humble him, and had firmly resolved never to give him a benefit.

The Abbé de Cortois once made a journey from Lyons to Paris in a stage-coach. He had taken the name of Quincey, which was given him by his family to distinguish him from his brothers, and by which he was known in his native place, Dijon.

There were several passengers in the coach who knew as little of him as he did of them. Most probably they had reason to be dissatisfied with M. de Mirepoix. They spoke of him with much acrimony, and painted him in very unfavourable colours. The Abbé Quincey mixed in the conversation, and defended the bishop very zealously, and with very good arguments. He warmly praised his virtues, his good qualities, his irreproachable character, but without offending his opponents by violent contradiction, and succeeded in silencing the censurers.

Among the passengers there was an old clergyman, who had taken no part in the dispute, and did not even seem to notice it. In fact, he scarcely spoke ten words during the whole journey; but he very attentively observed the Abbé Quincey, and when they had arrived at Paris, and the travellers were getting out of the coach, the old priest familiarly pressed the Abbé's hand, and said to him:

"I beg you, Abbé, to visit me in three days hence, at the convent of the Theatines, where I am a monk. Perhaps I may be so fortunate as to be of service to you, and to show you my gratitude for having taken the part of my brother, the bishop of Mirepoix."

The Abbé de Cortois was much surprised that he had unconsciously acquired so powerful a patron, and did not fail to call on the Abbé Boyer on the third day. The latter cordially embraced him, and said, "Go to my brother, and thank him for having applied

to the King in your favour. His Majesty has appointed you Bishop of Belloy."

The Abbé de Cortois instantly waited on the bishop of Mirepoix, who was much surprised at finding that the Abbé Quincey, who had been so strongly recommended by his brother, was no other than the Abbé de Cortois with the handsome legs, whom he had always viewed in so unfavourable a light, and so often unjustly humbled.

#### THE DRAMA.

DRURY LANE.—*Lord of the Manor*.—On Wednesday, Mr. Braham sustained the part of Truemore, in this pleasing opera. He was in charming voice, and added to the incomparable treat of harmony which his powers elicited from the songs belonging to the part, by introducing "Ah can I e'er forget thee, 'Fame in the battle,'" "The Soldier's gratitude," and other pieces of delightful music. Madame Vestris was a sweet and lively Annette; Misses Cubitt and Povey were commendable Sophias and Peggys. There was a dread drawback in (we were going to say the *male*, but we mean one of the other *female*) parts, owing to the non-appearance of Munden as Moll Flagon; Mr. Williams was his substitute—and so far from being fit for the regular army to which honest Moll was attached, would not do for the militia, volunteers, or City Bands. Harley however, was a good La Nippe, and Knight exerted his talent to make as much of Ralph as possible. Mr. T. Cooke performed Rashley, and sang with taste and science. Barnard was the young Contrast, which was poor compared to the rich and inimitable colouring of Jones, but by no means irreproachable to this very deserving actor.

Pocohontas.—A heldomade is a space of infinite value to the dramatic critic. It allows him opportunity to digest his ideas, should the uncommon occurrence of a modern piece lasting that time, render it necessary to express them; whereas should the reverse happen, and the play expire incontinently, he, while his diurnal brethren so often "waste their sweetness on the desert air," is saved from every sort of water. In this situation are we placed by the late "Pocohontas, or the Indian Princess." This unfortunate offspring of Indian royalty was born on Friday, and died on Tuesday: like Johanna Southcote, she gave out that she would come to life again on Friday, but she has not kept her word; and as this has rendered the public chance of seeing her again ninety-nine per cent worse than ever, we shall not detain our readers by a minute description of her beauties. Regardful at the same time of the humane, though cowardly and sycophantic axiom, of *de mortuis nil nisi bonum*, we shall abstain from relating her flirtations with one Captain Smith, and other incidents of little importance, except to the parties concerned. The writer is evidently young, for his sentiments belonged to the school, rather than to the play — to his studies rather than to his character.

COVENT GARDEN.—Mr. Vandenhoff, encouraged by his success in King Lear, has been

bold enough to choose Coriolanus as the third character in which to appear on the London stage. It was on Monday last that he attempted to sustain this part; but to our minds the attempt fell far short of success, though he certainly in many parts of the performance evinced very considerable talent. Indeed we are inclined to think so favourably of this gentleman's abilities, that we regret that he has not been more judicious in the choice of his characters. That of Coriolanus is one to which his powers are unequal, or unsuited; and the remembrance of the matchless performance of Kemble is yet too fresh to allow a fair chance of success, even to one more highly gifted than this new candidate. The lofty and swelling pride of the patrician—the fullness and depth of his indignation—the high bearing of his valour, his virtue, and his revenge, are what, (as it seems to us,) Mr. Vandenhoff has not power to express. He was more fortunate in the scene where he solicits the suffrages of the plebeians. There was throughout, (what he could not perhaps avoid,) an imitation of Kemble—but so bad, that we were glad when Yates somewhat indelicately gave the mockery of the first plebeian in a good burlesque of Kemble's style. The audience would not hear the play announced for repetition.

The new Christmas pantomimes announced are, *The North West Passage*, or *Harlequin Esquimaux*, at Drury Lane; and *Harlequin and Friar Bacon*, or *the Brazen Heel*, at Covent Garden. For our friends from all the public schools, we petition the managers to perform these as middle pieces thrice a week for the ensuing month.

## VARIETIES.

In conformity with an ordinance issued by the King of France, on the 25th of November, 1819, arrangements have been made at the *Conservatory of Arts and Trades*, for giving public instruction gratuitously on the application of the sciences to the industrious arts. There will be three courses of instruction, namely:—1st. *Mechanics*; 2d. *Chemistry*, applied to the Arts; and 3d. *Economy in Trade and Manufactures*. The first course will be superintended by M. Charles Dupin, of the Royal Academy of Sciences; the second by M. Clement; and the third by M. Say, author of the *Treatise on Political Economy*.

*Death of Naldi*.—Poor Naldi, the admirable buffo of the King's Theatre, has met with a strange and untimely death at Paris. Going to dine with Garcia, it is stated in the journals, he stopped the valve of a new cooking apparatus, which burst and killed him on the spot. His companion was slightly hurt. A description of the *autoclave* (the machine which proved so fatal) will be found at page 506 of the Literary Gazette for this year.

*Unicorns*.—The Quarterly Review asserts, on the authority of a letter from Major Latimer, that the Unicorn of the Scriptures exists in herds in the hilly country east of Nepal. It is called *tsop'o* in the Thibet language,

and is described at thirteen or fourteen hands high, fierce, and extremely wild. It is seldom caught alive, but frequently shot, and the flesh used for food. The hoofs are cloven, the tail boar-shaped, and the horn long and curved, growing out of the forehead.

*English travellers*.—A singular account of an English traveller of the name of Cochran has been sent from Petersburg, and inserted in the Newspapers. We have just received some interesting particulars from Moscow, which we shall insert in our next.

*Don-not*.—"I am the guardian of my own honour," said one of the leading advocates for reform to his friend, at a late public meeting, in reply to some personal allusions of the ministerial journalists, as to the motives by which he was actuated. "I am exceedingly glad to hear it," was the reply; "you have been long looking for a place, and have at last settled upon a sinecure!"

*Dandy*.—Some one has endeavoured to deduce the etymology of this word from *dandi-prat*, a coin, as Rapiu informs us, struck in the reign of Henry VII. It has been frequently applied as a term of contempt by the early dramatists. Thus Middleton, in his comedy 'More Dissemblers besides Women,' makes Dandolo say of Laccantio's page, "there's no fellowship in this *dandiprat*, this dive-dapper." In the same play, Linquepace says, "Who would be plagued with a *dandiprat* usher," &c. In Massinger's *Virgin Martyr*, Hircius, speaking of the attendant of Dorothea, thus soliloquizes upon him: "The smug *dandiprat* smells us out whatever we are doing." He has just before entitled him a "jackanapes," a "white faced monkey," and a "chitty-faced page." Old Marston, in his 'Scourge for Villanies,' notices the *dandiprat*, and so does honest Master Dekker, in one of his comedies. The term seems to have been in common request in the age of Queen Elizabeth, as an epithet of reproach.

*Anecdote*.—The celebrated Earl of Hardwicke, Chancellor of Great Britain, was the son of an attorney at Dover. During his education for the law, which commenced by his serving a clerkship with an attorney, he was frequently teased by the wife of his employer, a notable housewife, with trifling errands, as foreign to the circumstances of his profession as they were inconsistent with propriety and decorum. He soon took an opportunity to put an end to this, with one positive and peremptory refusal. "As you are going by the Green Grocer's, Mr. Yorke, will you be so good as to buy me a cauliflower?" was the last request he was ever troubled with. At his return the cauliflower was produced, which he observed cost one shilling and sixpence—sixpence for the cauliflower, and a shilling for a sedan chair to bring it home in!

Sir Walter Scott was lately unanimously elected President of the Royal Society of Edinburgh, vice Sir James Hall, resigned. Mr. Brougham was also recently chosen Lord Rector of the University of Glasgow.

*Pillory*.—Lord Kenyon's motto, *Magnamiter cratem sustineo*, has been thus appo-

sitely translated.—"I boldly recommitment the punishment of the pillory." It should be remarked, that it was at his suggestion the pillory began regularly to be inflicted upon persons guilty of perjury, &c.

*Learning*.—"No man," says Selden, "is the wiser for his learning; it may augment matter to work in, or objects to work upon, but wit, as well as wisdom, is born with a man."

*Plays*.—In an old account book of Bernard Lintot, the bookseller, the following information respecting the prices usually paid for the copyrights of plays is given. Tragedies were then the fashionable drama, and obtained the best price. Dr. Yerg received for his *Basiris*, 84*l.*; Smith, for his *Phœdra* and *Hipolytus*, 50*l.*; Rose, for his *Jane Shore*, 50*l.*; 15*l.*; and for *Lady Jane Gray*, 75*l.* 5*s.*; and Cibber, for *his Nonjuror*, obtained 105*l.*

## METEOROLOGICAL JOURNAL

DECEMBER 1820.

Thursday, 14.—Thermometer from 29 to 41.

Barometer from 30, 03 to 30, 11.

Wind N. E. 4, and N. E. 4.—Generally dry.

Rain fallen, .075 of an inch.

Friday, 15.—Thermometer from 28 to 31.

Barometer from 30, 12 to 30, 01.

Wind S. E. 4, and E. B. S. 2 and 3.—Generally cloudy; sunshine in the afternoon.

Saturday, 16.—Thermometer from 26 to 32.

Barometer from 29, 65 to 29, 72.

Wind E. B. S. 1, and 2.—Cloudy. Snow all

the afternoon and evening.

Sunday, 17.—Thermometer from 28 to 35.

Barometer from 29, 75 to 30, 04.

Wind E. B. N. and N. E. 4.—Generally foggy.

Snow on the ground 3 inches thick.

Rain fallen, 1 of an inch.

Monday, 18.—Thermometer from 35 to 41.

Barometer from 30, 22 to 30, 36.

Wind F. B. N. 1.—Foggy and cloudy. A

misty rain in the evening.

Tuesday, 19.—Thermometer from 40 to 46.

Barometer from 30, 32 to 30, 6.

Wind E. B. S. 1, S. B. W. and W. 0.—Cloudy,

till the evening, when it became foggy. The

upper part of a halo was formed about 8 o'clock.

P. M.

Rain fallen, .025 of an inch.

Wednesday, 20.—Thermometer from 35 to 41.

Barometer from 30, 54 to 30, 41.

Wind S. E. 0.—Morning foggy, and cloudy

all day.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

IV. M. asks for the precise address of Mr. A. Meawell, of Chelmside, whose letter we received in our last; and expresses a hope that we may "persuade him to carry on his correspondence more week." Unfortunately, the present trade war was raised by his attempt at levity, and he became a *Dandiprat*. His address will consequently appear in a different form from ours, next Saturday.

"A Mother" will gather from an article of our review written before receiving her letter, that we agree with her in opinion on the subject of female literature; we would rather show our approbation in this way than by entering into discussions with others.

ERRATUM.—In the concluding note of the poet on the New Royal Society, last week, I put the bottoms, for "insipids" read "lappet."

### Miscellaneous Advertisements, Connected with Literature and the Arts.

*One Hundred Books of Instruction and Amusement, for Christmas Presents.—A Catalogue to be had Gratis.*

**WILLIAM SAMS**, Bookseller to his Royal Highness the Duke of York, attracts the attention of the Nobility and Gentry to the CATALOGUE he has just published, and may be had at his Circulating Library, St. James's Street; containing the best Selection of Books, suitable for Presents. He has also for their Inspection, an elegant Assortment of Pocket Books, Court Calendars, and Albums, for the New Year, in plain and elegant bindings.—Private Boxes for the Theatres, may be had of William Sams, for the Night or Season.

*Omne talis punctum qui miscuit atque dedit.—Hor.*

To be Sold by Auction, by Mr. Saunders, at his Great Room, No. 39, Fleet Street, on Tuesday, Dec. 26th, and Four following days, at half-past twelve o'clock precisely.

**A COLLECTION OF SINGULAR AND INTERESTING BOOKS**, (from the Works of England), including many rare and curious Works in Divinity, Biography, History, Magic, Astrology, Freemasonry, &c. Among which are—*Folio*, *Monsieur l'Anique Expliqué*; *Hutchinson's Dorset*; *Hew's Works*; *Ecole de Cavalier*; *General Dictionary*, including Bayle, 10 vols.; *Shakespeare*, 1664; *Archibald Barker's celebrated Bible*; *Tyndale and Coverdale's Bible*; *Whitestock's Memorials*, 1732; *Old's Rarities*; *Arquand's Opera*, 10 vols.; *Barbeyrac's Gratius*, 1738; *Montanus's Hebrew Bible*; *the Works of Flavel*, 1814; *Whitby, Rapin, &c. Quarto*—*Roche's Statutes*, 14 vols.; *Cesar*; *Cicero*; *Sallust's Journal*; *Seneca*, *Delphic*; *Sully's Memoirs*, 3 vols.; *Watson's Philip II. and III.*; *Morier's Persia*, &c. *Octavo*—*Clarendon*, 6 vols. *large paper*; *Addison*, 4 vols. *large paper*; *Universal History*, 4 vols.; *Lavater*, 4 vols.; *Raynal's*, 12 vols.; *Mellor's Works*, 8 vols.; *Metastasio*, 12 vols.; *Saurin's Sermons*, 11 vols., &c. To be viewed and Catalogues had (price 1s. each).

### BOOKS PUBLISHED THIS DAY.

**A LETTER FROM THE KING** is this day published, by William Turner, Stationer to his Majesty at No. 62, Chesapeake, corner of Queen Street. To be had of Mr. Sams, bookseller to the Duke of York; Hatchard and Co. Piccadilly; and all booksellers.

In 2 vols. 8vo. price 11. 4s. boards, the second edition of **TRAVELS IN BRAZIL FROM PEINAMBUCO TO SEARA**; besides occasional Excursions. Also a VOYAGE TO MARANAM; the whole exhibiting a Picture of the State of Society, during a Residence of Six Years in that Country. Illustrated by plates of Costumes. By HENRY KOSTER. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had,

**THE HISTORY OF BRAZIL.** By Robert Southey, Esq. Vol. I. in 4to. price 2s. 2s. boards. Vol. 2. with a Map of the Country, price 2s. 2s. boards.

**AN ACCOUNT OF THE ORIGIN, PROGRESS, and actual State of the War carried on between Spain and Spanish America.** By a South American. In 8vo. price 2s. boards.

*Müller's Universal History.*

In 3 vols. 8vo. price 11. 16s.

**AN UNIVERSAL HISTORY**, in Twenty-four Books. Translated from the German of Von Müller. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"This publication forms one of the best epitomes of Universal History that we know, and, in many respects, well deserves to be used as a book of education. The arrangement is luminous, the proportion of the parts is equitable, the diction is pregnant with thought, the general tenor of opinion and sentiment is unbiassed and is liberal, and a sincere love of probity and justice habitually influences the personal criticism."—*Edinburgh Review*, March, 1819.

by Hurst, Robinson, and Co. 90, Chesapeake, the thirtieth and conclusive Number of

**THE BRITISH GALLERY OF ENGRAVINGS.** By EDWARD FORSTER, M.A. F.R.S. and S.A.; containing four plates, viz. The Trumpeter, by Turberg, engraved by Burnett; the Death of Cleopatra, by Dominichini, engraved by E. Smith; Pope Innocent X., by Velasquez, engraved by Fittler; Boy and Tablet, by Leonardo da Vinci, engraved by Bromley; with Descriptions, Titles, Dedication, and Index, in English and French. Price 21s. 6d. Proofs, large paper, 31. 12s. 6d. Proofs and Engravings, on India paper, 51. 3s.

\*A Complete set, containing Fifty-two engravings, in one volume, folio, half-bound, may be had.

Early in January will appear, the

**ANNUAL BIOGRAPHICAL OBITUARY**

for 1821. This volume is enriched with the Biography of several eminent persons; including Memoirs of three of the Royal Family; Sir Joseph Banks; Mr. Arthur Young; Mr. B. West; Major Topham; Dr. Mosley, &c. &c. The whole is interspersed with a variety of original documents, together with an amount of recent Biographical works, and an Index of persons lately deceased. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had,

THE ANNUAL OBITUARY for 1817-18-19-20, price 15s. each.

In 8 vols. 8vo. price, in boards, 11. 14s. or the 2d and 3d

separately, price 11. 14s.

## REVIEW OF NEW BOOKS.

### THE COSSACKS.

*Characteristic Portraits of the various Tribes of Cossacks attached to the Allied Armies in the Campaign of 1815. Taken from Life at Paris, and accompanied by historical Particulars, &c. London, 1820. 4to. pp. 52.*

This is a slight but interesting work. The portraits and costumes of the Cossack tribes are best represented in lithographic engravings, and the work altogether forms a pleasing memorial of the persons, whether Scythians or Tartars, who cut so remarkable a figure in the appalling contest between Napoleon and his enemies. The author takes a retrospective glance at the origin of the various branches of this singular people; but what concerns their modern appearance and manners, is more congenial to our purpose; and it is from that part of his work that we shall select our illustration.

"The Cossacks in general have something Asiatic in their habits and physiognomy. They are of the middle stature, but of a robust constitution, insusceptible to fatigue, and every vicissitude of climate. Almost all of them have blue eyes, brown hair, cut short in the neck, and the beard is more commonly red than black."

"The Russian government alone possesses the power of appointing or removing the hetman and the principal officers. The others are still elected by their equals; but when once they have taken rank in the Russian army, they cannot be cashiered, except by the emperor. The Cossacks in general are registered for the service at the age of eighteen years, and not discharged till they are fifty."

"Before the revolution effected by modern times in the military art, the Cossacks had an infantry which occasionally distinguished itself by feats of unparalleled audacity, and rendered good service so long as they had to do with ignorant nations; but when the latter were strengthened by the lessons of genius and experience, the Cossack infantry shrink from the conflict. They taken brought forward only a light, undisciplined cavalry, the bulk of which cannot sustain a comparison with that of civilized states. It is divided into *polks*, or regiments, each consisting of from one to three thousand men, according to the extent of the district which furnishes them. These *polks*, commanded by a *raskovnik ataman*, or *polkovnik*, are subdivided into hundreds, fifties, and tens, which have their particular officers. The number of irregular troops which all the branches of this great family

VOL. IV.

are capable of bringing into the field, is estimated at one hundred thousand men. When they are in active service, they receive a ration of flour, millet, or oatmeal, and are paid from twelve to fifteen rubles a year; and as they are obliged to find their own arms, horses, equipments, and subsistence, it is pretty clear that they must live almost entirely at the expence either of their enemies or of their allies. Their dress, which is left to their own choice, is a motley mixture of every colour. They are armed with a carbine, sabre, and pistols - their principal weapon is a pike - from seven to eighteen feet long, which they manage with great dexterity, and which alone is sufficient to render them formidable. But besides these, some of the Cossack corps carry a singular and not less dangerous weapon. This is a rope, from fifteen to eighteen feet in length, with a noose at one end, which they fling with such expertness and rapidity over a flying enemy, that, provided he be within reach, they entrap him in the noose as securely as the lazomen on the river La Plata catch the wild bullocks in precisely a similar mode. In this manner, at the time of the invasion of Russia, the French general Segur was caught, and dragged from his horse, by a Cossack, after he had cut his enemy's lance with two of his sword."

"The existence of this species of republic in the bosom of a great empire is an anomaly worthy of attention. Though the Cossacks are really subjects in the strictest signification of the word, they are not amenable to the general laws of the state; and it seems doubtful whether they can ever be brought into a state of civilization. The transplantation of their hordes, the apparent concessions made to them of their own territory, the annual grants of corn distributed among them, serve to keep up their horror of foreign manners, and their attachment to a wandering or military life; and, in short, their country, of which they seem to be but transient occupants, appears to our view like one vast camp pitched on the frontiers of Europe."

"The following anecdotes of the Cossacks who passed through Dresden in 1813, are strongly illustrative of their good-nature, cheerfulness, and general character."

"It appears that these rude people are by no means insensible to the charms of music, for which they manifest a strong predilection. A party of them, attracted by the solemn peal of the organ, entered a church, and while it was playing, continued fixed in silent attention. Its tones ceased, and the officiating clergyman commenced his sermon. This address, in an unknown language, soon began to excite symptoms of impatience in the strangers; one of whom

stealing softly up the steps of the pulpit unobserved by the minister, startled him not a little by tapping him on the shoulder in the midst of his harangue, and inviting him, as well as he could by signs, accompanied with all sorts of grotesque gestures, to descend, and no longer interrupt the gratification which the organist afforded to himself and his companions. Notwithstanding the solemnity of the place, the gravity of the minister and his congregation were not proof against this attack, and it was some time before the former could so far recover from its ludicrous effect as to resume his discourse."

"This fondness for music was displayed on another occasion:

"A young lady, of a respectable family, was seated at her piano-forte, playing and singing. She was heard by a Cossack who was passing under her window. As if enchanted, he followed the melodious sounds, pursued his way up stairs, from room to room, and, after traversing several apartments, discovered the right one. He entered, and stood listening behind the lonely musician, who, half dead with fear on perceiving the figure of her martial visitor in a mirror, would naturally have run away. He detained her, and, in unintelligible language, but with friendly gestures, begged for a *Da capo*; and, without ceremony, fetched his comrades out of the street. The music soon relaxed the joints of the bearded warriors, and in a few moments they struck up a charming Cossack dance in the best room in the house. The trembling girl was obliged to summon up all her courage and strength, that her fingers might not refuse to perform their office in this critical juncture. She returned sincere thanks to Heaven when the dance was over, and was not a little surprised when one of the delighted performers, with the most cordial gestures, laid a piece of gold on the piano-forte. It was to no purpose that the young lady refused it; the donors retired, leaving behind them the piece of money, which the fair owner will doubtless preserve with care, as a memorial of the lovers of dancing and music from the deserts of Asia."

"The *anecdote* of these people were [was] expressed in a very different manner towards another young lady, likewise of a genteel family, who, out of economy, and supposing her guests to be so injured to harshness as to be proof against all sorts of weather, had directed that no fire should be made in the quarters destined for them. Though the almanac had for some days announced the return of all-reviving spring, the Cossacks experienced none of its enlivening effects in their uncomfortable quarters. Dissatisfied with the place, they sallied out in quest of

a warmer lodging. It was not long before they discovered one. This was the apartment of the young lady of the house.—*As! here warm—here good—stay with mamma!* So saying, the reconnoitring party took a strong position against the cold in *mamma's* room; thither all their baggage also was soon transported. *Mamma!* unless she had chosen to turn Cossack too, was obliged to relinquish her apartment to her gallant guests, and to procure in another the climate that she had quitted."

"A servant-maid, groaning under the weight of a large basket of damped linen, met a party of Cossacks. They took the basket from her, convinced her by their gestures that they intended no harm, and intimated by signs to the poor girl, to show them which way she was going. They not only carried the basket to the mangle, but helped to turn it for a whole hour; and, when they had done, desired nothing but a kiss for their pains."

"A Cossack, surrounded by a legion of boys, whom he sometimes took by the hand, and sometimes set a running by throwing his cap for them to bring back again, met a lad selling cakes. He immediately laid an embargo on the whole stock of the itinerant trader, which he divided among his merry companions, reserving for himself about a dozen cakes, which he put into the pockets of his wide breeches. Whilst occupied in housing them, he spied an elegant lady coming towards him, but who was about to turn off to avoid the crowd of boys. The Cossack ran up to her, pulled the cakes three at a time out of his magazine, and offered them to the lady, half dead with fright. *Mamma, good!—Dobro, mamma!* said he, with a friendly smile. When, however, neither kind words nor gestures could prevail on *mamma* to accept the cakes, he thrust them into her ridicule, and respectfully kissed her fair hands, in spite of all her endeavours to disengage them from his grasp. The lady made a precipitate retreat, and the Cossack watched as long as she was in sight with a look of concern."

"The booksellers' shops, where representations of all the Russian nations were to be seen in the windows, were always beset with crowds of Cossacks, who manifested the greatest joy on discovering themselves among them."

"The Cossack colonel, Prince G\*\*\*\*, was quartered with a lady of rank. The footman of the latter, going out of the house one evening about nine o'clock, observed a Cossack before the door, holding two horses. To his utter astonishment, he soon discovered that it was no other than Prince G., his mistress's guest.—'Good God!' said he, 'is your highness holding horses?'—'Yes; a Cossack who did not know me, just as I was coming out of the house, asked me to hold them for a moment. I did not like to refuse him; but the fellow stays rather too long. I have been standing here almost an hour.'—'Let me take the bridle: I will hold the horses.'—'No; I must keep the promise which I have given to the Cossack. A Cossack never breaks his word.' Whilst

the servant was expressing his surprise at this kind of observance of the word of a prince, the Cossack came up, recognized the illustrious horse-holder, and threw himself at the feet of his colonel, who mildly said, as he went away, 'Another time don't stay so long!'

The volume, after the general sketch from which we have taken these extracts, goes more into detail, and gives prints and descriptions of the Don, Ural, Grebenski, Zaporogian, Baschkir, Kirguis, Tcherkasses, (Circassian) Cossacks, and the Nogay and Mongols, who are more distinctly Tartarian. A brief view of the history of each is followed by characteristic anecdotes, of recent dates. Among these, the adventures of Alexander Zemenutin, in London, (whom many of our readers no doubt remember,) are conspicuous. The winter fishery of the Ural tribes in Siberia is curious."

"Before the opening of the four annual fisheries, tickets are given to the Cossacks registered for military service. The attamans receive four, the starchines three, the other civil and military officers two, and the private Cossacks one: but these tickets may be transferred or sold; so that those who are discharged, and not upon the register, who have not a right to fish, may purchase that right for a year. The first of these fisheries is the most important, the most productive, and the most curious, on account of the severity of the season when it takes place, and the manner in which it is conducted."

"About the 3d or 4th of January, the registered Cossacks are assembled: inquiry is made if those who have been absent on business are returned, and where the most fish have been observed; for the sturgeons and belugas begin to ascend the river so early as the middle of autumn. The experienced fishermen, who watch them at the time the ice begins to form, assert, that these fish sport and play about the spot which they fix upon for their winter abode, where they lie torpid on the sand. A day is then fixed for opening the fishery. The wished-for day is ushered in by the discharge of artillery. The Cossacks, provided with tickets, mounted in sledges, and furnished with iron hooks of all dimensions, set out before sunrise, and range themselves in a line as they reach the appointed rendezvous. An attaman, elected for the season, reviews them, and examines if they have their hooks, and their arms to withstand the Kirguises, by whom they are frequently attacked; the *jazzonsis*, or aides-de-camp, recommend order, and the party proceed to the designated spot. The part of the river destined for the winter fishery is about four hundred wersts in length, following the winding course of the Ural. Every day a certain space is set apart for operations. Each Cossack has his place, which he chooses as he arrives, and which he may change with his neighbour if it suits them, or if one of them quits his situation; but none of them can begin to fish till the attaman has given the signal by a discharge of musketry. At this signal each makes a hole, the dimensions of which are nearly defined

in the ice at the spot which he has chosen. He thrusts the largest of his hooks down to the mud of the river, which is sometimes fifteen or sixteen fathoms deep. The fish, roused from its torpor by another hook which the fisherman holds in his left hand, strives to burrow deeper, and falls upon the first hook, which the Cossack instantly pulls up upon the ice. It sometimes happens that two neighbours catch the same fish, or that they have need of assistance to draw up the largest; in such cases they divide the booty. Some of them will catch ten sturgeons a day, several of which weigh as much as five *puds* (a *pud* is thirty-three pounds), and belugas of above eight hundred pounds weight. Others are so unfortunate as not to catch anything for several days; and perhaps do not take altogether sufficient to defray the expenses which their preparations for the fishery have occasioned, and which they often make upon credit. They never fail to ascribe this ill luck to some spell that is set upon them, and if by accident a frog should be brought up by their hook, they immediately desist from fishing, convinced that some fatality would attend them."

Of the Nogays we have the following trait.

"The Nogays profess Mahometanism, but are very negligent in the practice of its ceremonies, with which they mingle many superstitious customs of the Mogols. Hence Selym Guerai Khan's buffoon, when his master wished to persuade him to turn Mahometan, replied, 'As to the Mussulman religion, I cannot embrace it; but to please you, I will turn Nogay.'"

Of the *Baschkirs*—"Pastoral pursuits are still their favourite occupation, though they have been compelled to cultivate the ground. With the Baschkirs the horse is an indispensable animal; they are scarcely ever on foot. Their food chiefly consists of horse-flesh and mare's milk. The hide of the horse serves them for clothing, and with his hair they make ropes. They drink to intoxication of *kumis*, and so general is this practice, that, as I am assured, in the evenings of summer not one sober man is to be found among them. Some of the Baschkirs have camels, and they keep a great quantity of bees. Instead of furnishing them with hives, they merely make holes for them in the trunks of very straight trees. Sometimes they possess from two to five hundred such holes full of bees."

"Extraordinary stories are told of the voracity of the Baschkirs. One man will eat at a meal fifteen pounds of meat, and drink eight quarts of *kumis*. One of their favourite dishes is the *bishbarmark*, or fire-finger dish, so called because it is swallowed by handfuls. It consists of hashed horse-flesh. Baschkirian politeness requires each person to cram a handful of this hash into his neighbour's mouth; and when they have public entertainments, every one strives to introduce a handful into the mouth of the chief, who has nothing to do but digest what he is so liberally supplied with. If the mistress of a house is going to treat her guests with sheep's feet, she throws some

dozens of them on the fire; takes them off when they are half broiled, and brings them up armfuls to the table. With this ravenous disposition, the Baschkirs find themselves rather straightened in winter: it is said that their condition during that season is truly pitiable; that they look like spectres, and do not begin to recover their flesh till spring."

Respecting the Tcherkassian language we find the annexed account.

"Besides the ordinary language, the Tcherkasses have two others, which they use in excursions, and keep secret. One of these is called the *chokobché*, and the other the *tarchipsé*. The first is a totally distinct language; the latter differs in no respect from the vulgar tongue, but in the addition of certain syllables, such as *ré* or *fé* to every word. In Tcherkassian, the ear, for instance, is *tak-ioumah*; in *chakobché*, *bactou*, and in *tarchipsé*, *tarinariguaré*: eye, in Tcherkassian, is *me*; in *chakobché*, *puphe*; in *tarchipsé*, *rinnari*. The proper names of the Tcherkasses are almost all compound substantive nouns. Some of them are very curious: for instance, *Keltchougua*, son of wool; *Meir-imaqua*, son of Friday; *Khammurea*, prince of dogs; *Hadiagua*, little dog without tail. One remarkable circumstance is, that in the Tcherkassian language we meet with most of the Polovtzi names mentioned in the ancient history of Russia. For example, the Polovtzi word *Oenluk* is undoubtedly the name of *Schulak*, belonging to a Tcherkassian family which reigns over the tribe of Beslen; as *Oouroussoba* is the *Oouroutsky* of the Tcherkasses, who denote by this term a prince of the Russians. Many of the nobles speak the Tartar language, which is diffused not only over the Caucasus, but through the whole of Western Asia."

These extracts will serve to show that this volume is entertaining, and with them we take our leave of it.

*Desultory Thoughts in London, Titus and Giappus, with other Poems.* By Charles Lloyd, author of *Nugæ Canoræ*, &c. London, 1821. 12mo. pp. 252.

This author belongs to the class of modern writers, who take liberties with English versification, which are, in our opinion, utterly subversive of all the beauties of poetry. Alike in rhythm and a rhyme, they seem to seek rather than avoid occasions, wherein to show their disregard of all the rules heretofore considered essential to the constitution of verse. But if Mr. Lloyd comes before us as a poet in this objectionable haphazard, he does not so offend by licentiousness of ideas, immorality of sentiments, or depravity of soul as a man, as to render himself obnoxious to that severity of criticism which virtue, justice, and honour, must ever award against one of the productions of the school of which he is a member. His errors are

rather those of style than of heart; rather of bad taste than of a corrupt mind. We may tire of his metaphysical refinements; but they are innoxious in principle and effect. In short, we look upon him to be a well-meaning enthusiast—devoted to the highest imaginative delights, and possessed of far more inclination than power to grasp and enjoy them. Should this opinion, gathered from his writings, be correct, he is too amiable an individual to provoke angry remark; and we shall best consult our private feelings, and discharge our public duty, by confining ourselves to a few extracts from the volume now published.

The work is prefaced by a "Dedictory Sonnet to *Sophia*," commencing thus—

Let it be never said, that I can bring  
A tuneful trophy, and disloyally  
To any one present it but to thee  
Who dost inspire me;.....

but it should seem that poets (who deal in fiction) are, like liars, possessed of short memories; for in the very next page, the *Desultory Thoughts*, &c. are "presented" to another lady. We leave them to pull caps about it, and quote the latter "dedictory lines," which display a prettiness of poetical thought, though deformed by the frequent bad measure, and affected or ridiculous terminations.

To whom, more suitably, can I present

Effusions, London, penn'd in thy deep haunt,  
Than to a friend there, the sole friend fast lost,  
Who canst that homeless, home's peculiar want

I should not feel—not so—that it should daunt  
With sense of loneliness my pining spirit,  
That I no more should have the will to chaunt  
My simple lays? Yes, thou canst boast the merit,  
Though *gift of Joy*, that life did still some *Hope*  
inherit.

'Tis a refreshing thing on thee to think,  
And such as thee, on life's unsolac'd road;  
Who from no one, though failing, e'er dost shrink  
When call'd upon that aught might be be-  
stow'd.

Frank, gen'rous, with a heart where ever  
glow'd,  
And still glows, sympathy's most cheering flame;  
From thee, on every side, there still hath  
flow'd

A tributary stream, whose selfless aim,  
Though it dispense to all, no eulogy doth claim.  
Like to a river, which, thro' covert wild,  
And shrubby underwood, its smooth lapse  
winds;

Or through the wide champagne, blithe as a  
child,  
So unassumingly its passage finds,  
That by the brighter green more various kinds,  
And richer hue of flowerets here and there,  
Where'er its course it takes, kiss'd by the  
winds,

We chiefly guess, munificently fair,  
That where we look, to heaven its bosom it oth-  
bare.

Like to that river too (another cause  
Of its meek imperceptibility)

That 'tis so clear, that to its wave it draws  
A second portrait of what e'er we see;  
A second portraiture most easily  
Confound'd with th' original! Thus thou  
Bear'st on thy flexible countenance and free,  
Whatever impress other's cares there plough,  
And all their joys and griefs are pictur'd on thy  
brow.

Tis their augmented happiness alone,  
Except to the discerning eye of Heaven,  
Which bears an evidence thou movest on;  
Without pretension so, with path so even,  
To thee to be progressive, it is given!  
Thus, like the stream I mention'd, whose guess'd  
way,

The richer hues that round that way have  
thriven,  
So clear and calm it is, alone betray;  
To all around thee, thou mute blessings dost  
convey.

Three stanzas from the principal poem, will show to what excess of absurdity the worst branches of the Della Cruscan art can be carried by the newer votaries of nonsense verse, meaning nothing, and full of abstract words (if we may say so) instead of the higher fully of abstract ideas.

O! had we eyes to see, what spot is there  
In all the world, in which we might not find  
Something of lovely, and perhaps of rare,  
To amuse the various functions of the mind?  
With such profusion of the good, and fair,  
We need not say 'we're gone' (or, like  
moles, blind,  
We well deserve consignment to a warren)  
"From Dan to Beersheba, and found all barren."

See, through you avenue, that mourner stealing!  
To him in friendship's tenderest relation  
Once did I stand: he's written past all healing;  
His wife, by him, without exaggeration,  
Of woman-hardihood, and genuine feeling,  
And generosity,—of any nation  
With proofs most noble and affecting, vies:  
At Portia's faith no more I feel surprise.

They liv'd surrounded by a beauteous flock  
Of children, in conversable retirement;  
A competence had they, and not to mock,  
But say the truth, if ever the requir'd  
Oth' Seasons' Poet form'd a household stock,  
Love, friendship, leisure's free arbitrement  
Of occupation,—they to them seem'd given—  
"Progressive virtue, and approving heaven."

We can conceive nothing more silly, more  
unpoetical, nor more senseless, than this  
rhapsody of dilute sensibility: but we will  
keep our promise, and if we cannot exhibit  
the author in the light we wish, we will give  
from his pen an example of what pleases us  
most. The following recollections of youth  
breathe the fancies of a fine and gentle spirit.

Oh, were the eye of youth a moment ours!  
When every flower that gemm'd the various  
earth  
Brought down from Heaven enjoyment's genial  
showers!  
And every bird, of everlasting mirth  
Prophecied to us in romantic bowers!  
Love was the gariture, whose homeless birth  
Caust'd that each filmy web where dew-drops  
trembled,  
The gossamer's haunt of elves resembled!

We can remember earliest days of spring,  
When violets blue and white, and primrose  
pale,

Like callow nestlings 'neath their mother's wing,  
Each peep'd from under the broad leaf's green  
veil,  
When streams look'd blue; and thin clouds  
clustering  
O'er the wide empyrean did prevail,  
Rising like incense from the breathing world,  
Whose gracious aspect was with dew impar'd.

When a soft moisture, steaming every where,  
To the earth's countenance mellowed hues im-  
parted;  
When silvan choristers self-pois'd in air,  
Or perched on boughs, in shrilly quiverings  
darted  
Their little raptures forth; when the warm glare  
(While glancing lights backwards and for-  
wards started,  
As if with meteors silver-sheath'd 'twere flooded)  
Sultry, and silent, on the hill's turf brooded.

Oh, in these moments we such joy have felt,  
As if the earth were nothing but a shrine;  
Where all, or awe inspir'd, or made one melt  
Gratefully towards its architect divine!  
Father! in future (as I once have dwelt  
Within that very sanctuary of thine,  
When shapes, and sounds, seem'd as but modes  
Of Thee!)

That with experience gain'd were heaven to me!  
Of in the fullness of the joy ye give,  
Oh, days of youth! in summer's noon-tide  
hours,  
Did I a depth of quietness receive  
From insect's drowsy hum, that all my powers  
Would baffle to portray! Let them that live  
In vacant solitude, speak from their bowers  
What nameless pleasures letter'd ease may cheer,  
Thee, Nature! bless'd to mark with eye and  
ear!—

Who can have watch'd the wild rose' blushing  
dye,  
And seen what treasures its rich cups contain;  
Who, of soft shades the fine variety,  
From white to deepest flush of vermeil stain?  
Who, when impar'd with dew-drop's radiance  
Its petals breath'd perfume, while he did  
strain  
His very being, lest the sense should fail  
T' imbibe each sweet its beauties did exale?

Who amid lanes on eve of summer days,  
Which sheep brouse, could the thickest  
wealth behold?

The fragrant honey-suckle's bowery maze?  
The furze bush, with its vegetable gold?  
In every ant's breath that helps to raise  
The fox-glove's cone, the figures manifold  
With such a dainty exquisiteness wrought?—  
Nor grant that thoughtful love they all have  
taught?

The daisy, cowslip, each have to them given—  
The wood anemone, the strawberry wild,  
Grass of Parnassus, meek as star of even;—  
Bright as the brightening eye of smiling child,  
And bathed in blue transparency of heaven,  
Veroica, the primrose pale, and mild;—  
Of charms (of which to speak no tongue is able)  
Intercommunion incommunicable!

The sweet and natural sentiments expressed  
in these lines far more than overbalance any  
defects in their construction. Our only other  
selection shall be a well-turned and well-de-  
served eulogy on a lady, who, acting the  
part of a ministering angel on earth, is at  
once an honour to her sex, to her country,  
and to humanity.

A timid female, arm'd with gospel faith!—  
A timid female, arm'd with gospel love!—  
To haunts hath pierc'd, where, ne'er before  
the path  
To virtue dedicate, led one to move;  
Not only hath confronted vice; (worst scath  
God lays on man) but those whom crimes re-  
move  
From human pity, (healing Fate's last wound)  
She to her heart with ties of love hath bound.

Thy "praise is not of men;" I know full well  
That human lips' approval is to thee  
(E'en though made potent by the daintiest spell  
That art could cull from stores of flattery;  
E'en though its tones like "blare" of trumpet  
should swell)  
But "sounding brass," and solemn mockery.  
Yet as a soul is ead's this boon to bear,  
Accept:—the human soul is thy first care.

Think what it must to those be, only wont  
To hear the ribald song, or oath profane;  
What it must be for those who—vice made gaudy  
By misery, in aspect most obscene,—  
Were used to see; whom chilling scowls did  
daunt,  
Or laughing madness with her clanking chain;  
To hear *the* truth persuasive made by thee?  
In their religion's real charm to see?

The gospel promise is fulfill'd in thee,  
The prisoner is set free; he that is bound  
Hath felt deliverance: for the unity  
Of comprehensive love hath now been crown'd  
By this last test of gospel verity.

For since from prison walls hath gone a sound  
Through all the earth, that they who linger  
there  
Are call'd in Christ, thy chains are snapp'd,  
Despair.

We know not better liberty than this,  
E'en for the veriest freeman upon earth!  
Refuse not then the *unspiced* rad to kiss;—  
And, from it, the blooms of faith bud forth,  
The prisoner's manacle no longer is!

There are no barriers which this *second birth*  
Neither despise: they do but designate  
Another way to an immortal state.

And had not heaven's hand been in this, could  
one,  
A gentle female, thus all prejudice;—  
All preconceptions;—every hindrance thrown  
To bar the way;—each proud hypothesis!—  
And prouder sneers of those who've never known  
The "might of weakness" in a work like  
this:

The wisdom of gown'd delegates countervail?  
And plant a paradise within a jail?

Need we set the name of Mrs. Fry in the  
page with this just tribute? it is unnecessary,  
for the picture is peculiarly her own,  
though her example has inspired and joined  
to her many kindred female spirits in her  
resplendent works of love and charity.  
We shall not lengthen these observations.  
The readers of the volume which has raised  
them, will find it full of blemishes, yet in-  
terspersed with many admirable thoughts.  
We would fain hope, for the future fame of the  
writer, that the faults spring from a mistaken  
poetical creed, and may therefore cease  
when that is adjusted; while his better parts  
flow from a benevolent and warm dis-  
position, and may therefore be improved  
and perpetuated.

*History of the Reign of George the Third,  
completed to the Death of the King.  
By R. Bisset. Supplemental volume.  
8vo.*

The subjects which compose the present vo-  
lume, are the occurrences of the last 19 years,  
in the reign of George III; commencing  
with the meeting of parliament in October  
1801, and terminating with the death of  
that sovereign, in 1820. It professes to be a  
continuation of Dr. Bisset's History, with the  
established merits of which, the public are  
already sufficiently acquainted, and therefore  
they require from us no additional com-  
mendation. From a work, the object of which  
is to converge the rays of many years into  
the focus of a day's perusal, it would be  
beyond our limits to allow of numerous ex-  
tracts;—its character as a literary performance  
can alone be appreciated. That book  
may be considered of universal interest,  
which engages the attention of readers of  
every description; and the events within  
the time comprehended by the continuation,  
are more pregnant with important men-  
oranda than any equal period in the history  
of our species. Within this space we have  
had to lament the departure of eminent  
statesmen and accomplished orators. Dur-  
ing this time there has been a generous  
endeavour to diffuse the holy light of know-  
ledge, natural, civil, and religious, into those  
recesses where it had never penetrated,  
with the confident expectation that its beams  
might cheer the unlettered mass, and direct  
them to the paths of industry: that emerg-  
ing from the obscurity of ignorance, they  
might practise a more enlightened humanity,  
—be convinced that improvement was cal-  
culated to ameliorate their condition, and  
be directed by those moral precepts and wise  
laws which have been founded on the basis of  
the christian system. Time alone can re-  
veal us to reap the fruit of the seed that has  
been sown,—for moral germs are of slow  
vegetation. The same period records an  
instance of towering and turbulent ambition,  
rapid and monstrous in its growth, that  
swept monarchs from their thrones and  
enslaved the people: a grasp of power that  
converted volition into law, supported by  
swarms of legions, whose sanguinary aggres-  
sions made a charnel house of Europe.  
Yet we have lived to see this insatiate em-  
pyre despoiled of his trophies, vanquished by  
the illustrious hero of our own country, and  
deposited as an ignominious fixture, on an  
insulated rock.

—"nostris est farrago libelli."

These are the contents of the work be-  
fore us. As the author of the continuation  
has modestly concealed his name, we cannot  
indict a pang by censuring his performance,  
nor excite a blush by our commendation.  
The arrangement of the work is convenient;  
and it is supplied with a copious index.  
The style is easy, accurate, and perspicuous,  
never floating in the regions of metaphor and  
fancy; but throughout sustained with manly  
propriety of expression and underlying cor-  
rectness. Yet in *these* times it has a fault:

displays none of the restless spirit that animates party, but is fairly impartial throughout, leaning with as little bias as possible to what are called popular opinions. When Mr. Pitt departs from this busy scene he author puts on decent mourning; and he does the same when Mr. Fox expires. To those who only seek for a faithful record and an interesting relation of events, the continuation of Dr. Bisset will be a satisfactory annual. From its perfect candour and the abundance of solid and useful information it conveys, we recommend it to the notice of the intelligent reader. That the error of this continuation may be conceived, that the sample of text does not availate the favourable opinion we have given of the performance, we shall subjoin such extracts as the limits of our journal will permit.

The character of Mr. Pitt is thus sketched: "The total failure of the continental coalition greatly augmented the gloom and Disquietude which had begun to prevail in England in consequence of the alarming illness of Mr. Pitt. At the close of the former session of parliament, this distinguished statesman had been compelled, by the decline of a constitution originally delicate, to relinquish all active share in public business, and retire to Bath; from whence he returned in the commencement of the year, in a state of debility and exhaustion, augmented by anxiety and disappointment. He expired on the 23d of January, in the 47th year of his age, after having directed the affairs of this country for a longer period than any former minister. Under his auspices her maritime supremacy was confirmed by a series of most splendid victories; her colonial acquisitions were greatly extended; but her public burthens were enormously augmented. He laboured successfully to preserve her from the contagion of the revolutionary principles which desolated France, and exerted himself with equal zeal, but with less success, in resisting the military despotism by which that power threatened to subjugate the continent. As a financier, he displayed great ability in the accumulation of public resources; but it may be questioned whether he displayed great political wisdom in the distribution of them. In forming continental alliances he relied explicitly on the influence of money for insuring to Great Britain that ascendancy in foreign courts to which by her generous aid she was entitled. But whatever may have been his errors, he is entitled to the praise of upright, and magnanimous intention; and in reviewing his unwearied exertions for the public service during a period of unexampled difficulty, it may be truly said, '*non sibi sed patrie vixit.*'"

To match this portrait, Mr. Fox is thus delineated, and with the examples this article must be concluded.

"The period was now approaching at which the British nation was to be deprived of one of its brightest ornaments. Mr. Fox, who, on his accession to office, was labouring under indisposition, had been disabled during the summer from attending to public

business: the rapid progress of his disease, a dropsy, baffled all the applications of medical skill, and he expired on the 13th of September, in the 57th year of his age. The public regret for his loss subdued for a time the conflicting prejudices of party, and a unanimous homage was paid to those great and uniaible qualities which won the cordial affection of his friends, and the generous admiration of his adversaries. As a senator, he was distinguished alike for the comprehensiveness of his views, the liberality of his principles, the persuasive and convincing force of his eloquence; as a minister of state, he displayed in the management of public affairs the same noble simplicity which characterised his conduct in private life; and he had sense and spirit to prefer the direct course of English plain dealing to the specious professions, the cautious wiles, the timid unworthy chicanery, the sinister reservations, and the over-reaching craft, which are but too commonly regarded as the perfection of modern diplomacy. Though the sincere advocate of peace, he uniformly deprecated the purchase of that blessing by the slightest sacrifice of national honour; his firm adherence to the principles of the constitution was no less conspicuous than his zeal for the cause of liberty; and he vindicated the rights of the people as the surest basis of the strength and prosperity of his country."

#### *The Octavo Edition of Wordsworth's Excursion.*

We do not usually conceive ourselves called upon to notice second editions of works; especially such as evince no variation from their predecessors, except in size and price. We must however claim the privilege of deviating from our accustomed mode in the case of Wordsworth's *Excursion*. Indeed a quarto, of the price of two guineas, is likely only to be known by report to the majority of readers of poetry; and the consequence is, that though this beautiful poem has been published, we believe, more than six years, it has, from its size and cost, been as inaccessible to numbers, whom its contents would have delighted, as if it had continued in manuscript.

Nothing can be more remote from our purpose, than any idea of entering into an elaborate critique on the poem now before us; for although from its hitherto limited circulation, we might fill column after column with extracts that would probably be new to many of our readers, and must elicit admiration from all; we are not sure that we should be authorized to do this by a work, which, in point of fact, has been already long known to the public by name; and which is now, we hope, likely to be universally read and duly appreciated. But we cannot consent to let the second edition of such a poem only have its appearance announced in the common advertisements of the trade. This would indeed be a lasting disgrace to us as conductors of a Journal, claiming the proud appellation of a Literary Record. Our department in criticism is,

we are sensible, comparatively an humble one: promptitude, and fairness, are the qualities by which we consider our notifications most likely to be rendered really valuable to our readers. We do not pretend either to dictate to the taste of the present age, or to anticipate the judgment of posterity. Exceptions, however, do occur, if they only prove the existence of the general rule; and believing this to be one of them, we are induced to congratulate it's author and the public on the appearance of *The Excursion*, in a form which may enable the lovers of poetry to judge for themselves of it's merits. The result of that judgment we are quite willing to commit to pure taste, and genuine feeling; but we should be equally unjust to the author, and ourselves, did we not express our belief, that if a faith at once meek and sublime; a genius, at the same time pure, lofty, and ennobling; a philosophy, equally comprehensive, and profound; be qualities likely to render the public decision favorable, the *Excursion* has nothing to fear. It is a volume to which the lover of nature may turn with delight, for its enchanting pictures of scenery, and its patriarchal views of character; the admirer of poetry, for almost every better charm which his favorite science can exemplify; the philosopher, for the profoundness and majestic simplicity of many of its speculations; and the christian, for the unaffected piety and devotional sublimity it so abundantly displays.

#### THE DELPHIN CLASSICS, NOS. XXI & XXII.

These two Numbers of this noble work have so recently appeared, that we have only been able to give them a cursory examination. They contain the history of Tacitus, lib. iv and v, his *Germania*, *Vita Agricola*, and *De Oratoribus*, with copious *Notae Variorum*. These parts, as we had reason to expect from what have preceded, seem to us to sustain the high reputation of this edition of the classics. In candour and truth we have no fault to find with them, nor can we look back but with satisfaction at having subscribed to a production which will form a very complete classical library for generations to come; afford us great present pleasure; and be esteemed a meritorious example of British literary enterprise. We trust Mr. Valpy will look diligently to obtaining copies of the numerous portions of ancient writers which are being recovered at this time on the continent; and of several of which the *Literary Gazette* has had specimens as well as notices: all these should be incorporated with the *Delphin*.

#### BELZONI ON NUBIA AND EGYPT.

(Second Journey—Continued.)

Returned from Ysamboul to his old quarters at Luxor, Belzoni found the mummy grounds at Gournou occupied by two French agents, and was thus luckily forced to turn his researches to the valley of Behn el Malook, which is completely separated from Gournou by the chain of mountains that divides Thebes from the valley. Here the experience has

had acquired in ascertaining the sites of tombs was of eminent service.\* He soon observed a spot which presented the appearance of a tomb; excavated, and discovered first, the rock cut into a passage leading downward, and next a wall. In this wall he battered a breach, and his account thus proceeds:—

"We entered, and found ourselves on a staircase, eight feet wide and ten feet high, at the bottom of which were four mummies in their cases, lying flat on the ground, with their heads toward the outside. Farther on were four more, lying in the same direction. The cases were all painted, and one had a large covering thrown over it, exactly like the pall upon the coffins of the present day.

"I went through the operation of examining all these mummies one by one. They were much alike in their foldings, except that which had the painted linen over it. Among the others I found one, that had new linen, apparently, put over the old rags; which proves, that the Egyptians took great care of their dead, even for many years after their decease. That which was distinguished from all the rest, I observed was dressed in finer linen, and more neatly wrapped up. It had garlands of flowers and leaves, and on the side over the heart I found a plate of the metal which I have already described, soft like lead, covered with another metal, not unlike silver leaf. It had the eyes of a cow, which so often represents Isis, engraved on it; and in the centre of the breast was another plate, with the winged globe. Both plates were nearly six inches long. On unfolding the linen, we still found it very fine, which was not the case with the other mummies; for after three or four foldings, it was generally of a coarser kind. At last we came to the body, of which nothing was to be seen but the bones, which had assumed a yellow tint. The case was in part painted; but the linen cloth covering it fell to pieces as soon as it was touched, I believe owing to the paint that was on it, which consisted of various dyes and flowers. The cases were sunk four inches into the cement I have already mentioned."

"The result of my researches gave me all the satisfaction I could desire, of finding mummies in cases, in their original position; but this was not the principal object I had in view; for, as I was near the place where the kings of Egypt were buried, I thought I might have a chance of discovering some of their relics.

"The sacred valley, named *Behan el Malook*, begins at Gournou, runs towards the southwest, and gradually turns due south. It contains the celebrated tombs of the kings

\* Belzoni does not explain this part of his antiquarian craft very distinctly. The secret, (as we have been informed by the nobleman whose collection of Egyptian relics we spoke of in our last Number) consists in observing the difference between the *debris* washed down from the mountain tops and the remains of excavated material: the former is in a state of perished nature, the latter is mixed with perfect specimens of the substances dug out by art in making the caves and chambers.—ED.

of Egypt, and divides itself into two principal branches, one of which runs two miles farther to the westward, making five miles from the Nile to the extremity. The other, which contains most of the tombs, is separated from Gournou only by a high chain of rocks, which can be crossed from Thebes in less than an hour. The same rocks surround the sacred ground, which can be visited only by a single natural entrance, that is formed like a gateway, or by the craggy paths across the mountains. The tombs are all cut out of the solid rock, which is of hard calcareous stone, as white as it is possible for a stone to be. The tombs in general consist of a long square passage, which leads to a staircase, sometimes with a gallery at each side of it, and other chambers. Advancing further we come to wider apartments, and other passages and stairs, and at last into a large hall, where the great sarcophagus lay, containing the remains of the kings. Some of these tombs are quite open, and others incumbered with rubbish at the entrance. Nine or ten may be reckoned of a superior class, and five or six of a lower order."

After commenting on Strabo, and describing some discoveries of less interest, we have the following account of a remarkable sepulchre:—

"Proceeding through a passage thirty-two feet long and eight feet wide, and descending by a staircase of twenty-eight feet, we reached a tolerably large and well-painted room. The ceiling was in good preservation, but not in the best style. We found a sarcophagus of granite, with two mummies in it, and in a corner a statue standing erect, six feet six inches high, and beautifully cut out of sycamore-wood: it is nearly perfect except the nose. We found also a number of little images of wood, well carved, representing symbolical figures. Some had a lion's head, others a fox's, others a monkey's. One had a land-tortoise instead of a head. We found a calf with the head of a hippopotamus. At each side of this chamber is a smaller one, eight feet wide, and seven feet long; and at the end of it is another chamber, ten feet long by seven wide. In the chamber on our right hand we found another statue like the first, but not perfect. No doubt they had been placed one on each side of the sarcophagus, holding a lamp or some offering in their hands, one hand being stretched out in the proper posture for this, and the other hanging down. The sarcophagus was covered with hieroglyphics, merely painted or outlined; it faces south-east by east."

These however were but preludes to the grand discovery of a new and perfect monument of Egyptian antiquity, superior to any other in point of style, grandeur, and preservation.

The rubbish was dug from a tomb eighteen feet below the surface of the ground; and the author proceeds: "The appearance indicated, that the tomb was of the first rate; but still I did not expect to find such a one as it really proved to be. The Fellahs advanced till they saw that it was probably a large tomb, when they protested they could

go no further, the tomb was so much choked up with large stones, which they could not get out of the passage. I descended, examined the place, pointed out to them where they might dig, and in an hour there was room enough for me to enter through a passage that the earth had left under the ceiling of the first corridor, which is thirty-six feet two inches long, and eight feet eight inches wide, and, when cleared of the ruins, six feet nine inches high. I perceived immediately by the painting on the ceiling, and by the hieroglyphics in basso relievo, which were to be seen where the earth did not reach, that this was the entrance into a large and magnificent tomb. At the end of this corridor I came to a staircase twenty-three feet long, and of the same breadth as the corridor. The door at the bottom is twelve feet high. From the foot of the staircase I entered another corridor, thirty-seven feet three inches long, and of the same width and height as the other, each side sculptured with hieroglyphics in basso relievo, and painted. The ceiling also is finely painted, and in pretty good preservation." At the end of this passage a large pit intercepted further progress: "This pit is thirty feet deep, and fourteen feet by twelve feet three inches wide. The upper part of the pit is adorned with figures, from the wall of the passage up to the ceiling. The passages from the entrance all the way to this pit have an inclination downward of an angle of eighteen degrees. On the opposite side of the pit facing the entrance I perceived a small aperture two feet wide and two feet six inches high, and at the bottom of the wall a quantity of rubbish. A rope fastened to a piece of wood that was laid across the passage against the projection which form a kind of door, appears to have been used by the ancients for descending into the pit; and from the small aperture on the opposite side hung another, which reached the bottom, no doubt for the purpose of ascending. We could clearly perceive, that the water which entered the passages from the torrents of rain ran into this pit, and the wood and rope fastened to it crumbled to dust on touching them. At the bottom of the pit were several pieces of wood, placed against the side of it, so as to assist the person who was to ascend by the rope into the aperture."

Belzoni proposes to make a model of this superb excavation, for exhibition in England.

"Immediately within the entrance into the first passage, on the left hand, are two figures as large as life, one of which appears to be the hero entering into the tomb. He is received by a deity with a hawk's head, on which are the globe and serpent. Both figures are surrounded by hieroglyphics; and farther on, near the ground, is a crocodile very neatly sculptured. The walls on both sides of this passage are covered with hieroglyphics, which are separated by lines from the top to the bottom, at the distance of five or six inches from one another. Within these lines the hieroglyphics form their sentences; and it is plainly to be seen, that the Egyptians read from the top to the bottom, and then recommenced at the top. The ceiling

of this first passage is painted with the figure of the eagles. Beyond the first passage is a staircase with a niche on each side, adorned with curious figures with human bodies and the heads of various animals, &c. At each side of the door at the bottom of the stairs is a female figure kneeling, with her hands over a globe. Above each of these figures is the fox, which, according to the Egyptian custom, is always placed to watch the doors of sepulchres. On the front space over the door are the names of the hero and his son, or his father, at each side of which is a figure with its wings spread over the names to protect them. The names are distinguished by being inclosed in two oval niches. In that of Nichao is a sitting figure, known to be a male by the beard. He has on his head the usual corn measure, and the two feathers; on his knees the sickle and the flail: over his head is a crescent with the horns upward; above which is what is presumed to be a flag of various pieces of wood bound together, and by its side a group twisted in a serpentine form. Behind the figure are what are thought by some to be two knives, by others feathers; but as the feathers are of a different form, I for my part think they are sacrificing knives, which may have served as emblems of the priesthood, for we know, that the heroes or kings of Egypt were initiated into the sacred rites of the gods. Below the figure is a frame of two lines drawn parallel to each other, and connected by similar lines, beneath which is the emblem of moving water.

"In the next oval on the right is a sitting female figure with a band round the head fastening a feather, and on her knees she holds the keys of the Nile. Above the head is the globe, and beneath the figure the form of a tower, as it is supposed to represent strength. The faces of both figures are painted blue, which is the colour of the face of the great God of the creation. On each of the oval frames is the globe and feathers, and beneath it two hieroglyphics not unlike two overflowing basins, as they are under the two protecting figures at each side of the frame.

"Next is the second passage, on the right hand side of which are some funeral processions, apparently in the action of taking the sarcophagus down into the tomb, the usual boat, which carries the male and female figures upon it, and in the centre the boat with the head of the ram drawn by a party of men.

"The wall on the left is likewise covered with similar processions. Among them is the sacrahens, or beetle, elevated in the air, and supported by two hawks, which hold the cords drawn by various figures; and many other emblems and symbolical devices. The figures on the wall of the well are nearly as large as life. They appear to represent several deities; some receiving offerings from people of various classes.

"Next is the first hall, which has four pillars in the centre, at each side of which are two figures, generally a male and a female deity. On the right hand side wall there are three tiers of figures one above the other,

which is the general system almost all over the tomb. In the upper tier are a number of men pulling a chain attached to a standing mummy, which is apparently unmoved by their efforts. The two beneath consist of funeral processions, and a row of mummies lying on frames horizontally on the ground. On the left is a military and mysterious procession, consisting of a great number of figures, all looking toward a man who is much superior to them in size, and faces them. At the end of this procession are three different sorts of people, from other nations, evidently Jews, Ethiopians, and Persians. Behind them are some Egyptians without their ornaments, as if they were captives rescued and returning to their country, followed by a hawk-headed figure, I suppose their protecting deity.

"I have the satisfaction of announcing to the reader, that, according to Dr. Young's late discovery of a great number of hieroglyphics, he found the names of Nichao and Psammethis his son, inserted in the drawings I have taken of this tomb. It is the first time that hieroglyphics have been explained with such accuracy, which proves the doctor's system beyond doubt to be the right key for reading this unknown language; and it is to be hoped, that he will succeed in completing his arduous and difficult undertaking, as it would give to the world the history of one of the most primitive nations, of which we are now totally ignorant. Nichao conquered Jerusalem and Babylon, and his son Psammethis made war against the Ethiopians. What can be more clear than the above procession? The people of the three nations are distinctly seen. The Persians, the Jews, and the Ethiopians, come in, followed by some captive Egyptians, as if returning into their country, guarded by a protecting deity. The reason why the Egyptians must be presumed to have been captives is, their being divested of all the ornaments, which serve to decorate and distinguish them from one another. The Jews are clearly distinguished by their physiognomy and complexion, the Ethiopians by their colour and ornaments, and the Persians by their well-known dress, as they are so often seen in the battles with the Egyptians."

We must refer to the work itself for the particulars of the other chambers.

"The Arabs made such reports of this discovery, that it came to the ears of Hamed Aga of Kenneh; and it was reported to him, that great treasure was found in it. On hearing this, he immediately set off with some of his soldiers to Thebes, generally a journey of two days, but such was his speed in travelling, that he arrived in the valley of Belan-el-Malook in thirty-six hours by land. Before his arrival some Arabs brought us intelligence, that they saw from the tops of the mountains a great many Turks on horseback entering the valley, and coming towards us. I could not conceive who they could be, as no Turks ever came near this place. Half an hour after they gave us the signal of their approach, by firing several guns. I thought an armed force was sent to storm the tombs and rocks, as no other object

could bring the Turks there; at last, when this mighty power reached us, I found it to be the well-known Hamed Aga of Kenneh, for some time commander of the eastern side of Thebes, and his followers. Accordingly I was at a loss to conceive what he wanted there, as we were on the west, and under another ruler; but I suppose, in case of a treasure being discovered, the first that hears of it seizes it as a matter of privilege. He smiled, and saluted me very cordially; indeed more so than usual, I presume for the sake of the treasure I had discovered, of which he was in great expectation. I caused as many lights to be brought as we could muster, and we descended into the tomb. What was on the walls of this extraordinary place did not attract his attention in the least; all the striking figures and lively paintings were lost on him: his views were directed to the treasure alone; and his numerous followers were like hounds, searching in every hole and corner. Nothing, however, being found to satisfy their master or themselves, after a long and minute survey, the Aga at last ordered the soldiers to retire, and said to me, 'Pray where have you put the treasure?' 'What treasure?' 'The treasure you have found in this place.' I could not help smiling at this question, which confirmed him in his supposition. I told him that we had found no treasure there. At this he laughed, and still continued to entreat, that I would show it him. 'I have been told,' he added, 'by a person to whom I can give credit, that you have found in this place a large golden cock, filled with diamonds and pearls. I must see it. Where is it?' I could scarcely keep myself from laughing, while I assured him that nothing of the kind had been found there. Seemingly quite disappointed, he seated himself before the sarcophagus, and I was afraid he would take it into his head, that this was the treasure, and break it to pieces, to see whether it contained any gold; for their notions of treasure are confined to gold and jewels. At last he gave up the idea of the riches to be expected, and rose to go out of the tomb. I asked him what he thought of the beautiful figures painted all around. He just gave a glance at them, quite unconcerned, and said, 'This would be a good place for a harem, as the women would have something to look at.' At length, though only half persuaded there was no treasure, he set off with an appearance of much vexation."

Taking leave of this successful speculation, Mr. Belzoni, on returning to Cairo, undertook to open, and was equally fortunate in penetrating the second pyramid at Ghizeh. The details of this affair were, however, formerly published in the Literary Gazette, and it is unnecessary now to dwell upon them. The author is quite querulous on the subject, and angry with every one who ventures to maintain any other hypothesis but his own; namely, that the pyramids are nothing but sepulchres. The dimensions of this stupendous work are, basis 684 feet; apotome or central line down the front, 508 feet; perpendicular, 436 feet; coating from the top to where it ends, 140 feet.

This achievement finishes the researches and operations of the second journey.

## ORIGINAL CORRESPONDENCE.

### KENILWORTH IN 1819.\*

Report anticipates a high treat in the novel under this title, which we observe is announced for publication about the 2d week of January. We can promise our readers the most early and full notice of it; till then, it may not be uninteresting literary gossip to mention, that it will boast of perhaps the most striking female portrait yet drawn by the potent hand of the author. We are further assured by a northern friend, who has the good fortune to be behind the curtain on these occasions, that Kenilworth is, in his judgment, equally remarkable for incident and interest, as for the delineation of human character. Indeed he thinks its interest unprecedented. The description of the ancient castle is also spoken of in terms of admiration.

It is one not of the least pleasures which the conductors of the *Literary Gazette* have the good fortune to experience, that their work has generated a very kindly feeling towards them among their readers, the advantages of which they are constantly reaping in good offices from those who are personally utter strangers. No week passes in which friendly offers and useful assistance, from unknown individuals, do not cheer them in their labours, and help them to render their task better worthy of public approbation. They gratefully acknowledge this, and beg most sincerely to express their general thanks; while from one favour of this sort they select the following further particulars respecting Kenilworth in its present state:

"The pleasant little village of Kenilworth is situated five miles north of Warwick, on the Coventry road. On the west side of the village is a truly picturesque situation, stands the ruins of the once celebrated and magnificent castle."

"The site is on the rising ground surrounded by a deep moat, capable of being insulated at pleasure: the walls are still discernible all round, and the area which they encompass is seven acres. Five of the towers are still visible; and one of them (now converted into a farm house) is entire: the remaining three are to be easily discovered, by referring to a print taken from a drawing as it stood in 1620. On the south side of the castle there was formerly a beautiful lake (now converted into a fine meadow) containing 112 acres."

"The many remarkable events so intimately connected with the public and private history of this place, attach to it no ordinary degree of interest; so that it is daily visited by many of the nobility, gentry, and curious."

\* See *Literary Gazette*, No. 137, for Brewer's account of this noble pile, in the Elizabethan era, &c.

† Taken from the letters of a gentleman to his brother, in May and August 1819, and politely sent to us at this time, when the subject has become more generally interesting. Ed.

from Leamington, Warwick, and surrounding counties.

"The castle having espoused the cause of Charles, whilst warring with parliament, Oliver Cromwell caused it to be demolished, and it has ever since remained a heap of ruins, without even one apartment habitable (excepting the Gate-Tower before mentioned, which is detached from the castle). There are many beautiful traces of ancient architecture still visible; particularly a large banqueting room, the windows of which are very spacious, and beautifully ornamented with exquisite gothic architecture. The ruins still present enough in bulk and extent to give a fine idea of their once formidable appearance."

"About half-way between Warwick and Kenilworth, the road goes over a small eminence, called Gavestone Hill, from the circumstance of Guy de Beauchamp, Earl of Warwick, having caused Pierce Gavestone to be beheaded here; shortly after which, a stone was erected on the spot, with the impression of the head and neck, still visible."

An adequate description (says the writer, in another letter from Warwick) would take half a day; but that you may have some idea of its magnificent and stupendous remains, I will give you a rough sketch of Kenilworth.

"The castle is situated at the south-east end of the town, on a fine rocky elevation of hard sand-stone; the whole fabric is also composed of this material; the space occupied by the castle, walls, &c. is three acres; the two principal towers are one hundred and fifty feet high from the river; the one nearest the Avon is called Caesar's, and the other Guy's Tower; they derive their names from the one being (they tell you) coeval with Caesar, and the other, from being built by the famous Guy, Earl of Warwick. All the north side of the building is elevated at least twenty feet above the river; the antiquity of the castle is unquestionably very great (at least many parts of it)—it was first built by a daughter of king Alfred, but has undergone many revolutions in the intermediate ages. It has often been demolished, and as many times has it risen triumphant from its ruins, which circumstances prove the importance of the place. The last attack it sustained was nearly two hundred years ago, when it was closely besieged by the rebels, who were gallantly repelled for three weeks by the deputy governor, until the Earl of Warwick marched from London with a party of troops, and drove the besiegers from their post, and entered his castle in triumph. But it was not till they had made several very bloody attacks on the castle, and the traces of violence are still visible about the grand entrance; and the identical hooks from which wool bugs were suspended, during the siege, still remain. Since that time it has enjoyed tranquillity, and is now in as good repair as it was then; though present antiquarians agree that the castle, in point of grandeur, is second to none in the kingdom, and that it is the first in point of preservation, as it is still entire at every point."

"The daily visitors to view it are very numerous, and it is not uncommon to see from five to ten carriages loitering in front of the porter's lodge at the same time as very few are permitted to drive up to the castle; and indeed it appears to be the great point of attraction in the county. The bridge formerly went across close by the castle; but the late lord, by way of improvement, built another nearly a quarter of a mile to the eastward of it. It is a very handsome stone bridge of one arch, by which is one of the finest views of the park. The park is three miles in circumference. The pleasure grounds are exceedingly beautiful, far beyond the reach of any description I can give. The whole is walled in on the two sides, and the other is bounded by the Avon. The nearest houses to Guy's Tower are at a seventy yards distant, and the intermediate space is most charmingly filled up with plantations, walks, and shrubberies; indeed, the whole of the deep ditch, except a beautiful level walk at the bottom, is closely covered with choice shrubs, trees, &c. which afford shelter all day long for innumerable tribes of feathered songsters. The trees also about the castle possess many very great natural beauties; and the whole are delightfully diversified, which enhances their value to no small degree. Indeed, the *countess's* is so eminently grand and beautiful, that I scarce ever take an evening's ramble without feeling sensations of the most happy description at being so closely encompassed with nature's own enchantments. In the pleasure grounds also is the noble green-house, which commands one of the finest prospects in the world, across the park, river, plantations, &c. In this place, on a marble pedestal, is acknowledged by every curious eye as one of the most rare and exquisite pieces of ancient sculpture: it is a bacchante, one of beautiful marble and capable of containing 160 gallons. All the history is gathered of it, is from the Latin inscription on the pedestal, which states, that it was dug out of the ruins of Hadrian's Villa, about five miles from Rome, and brought to England by Sir W. Hamilton, and bought by the Lord Warwick. The form of it is an eagle, being about six feet long and four broad; at the ends are two beautiful handles composed of vine branches curiously interwoven and trailing along under the beautiful appearance till they meet in the centre of each side. On each side there are also three heads exquisitely sculptured, representing satyrs. From these heads, extending each way to the end, is represented a panther's skin: it begins in the centre of the sides with the head of a panther, and continues till the hind feet are between the vine branch handles at the ends, where they very naturally cross each other, and appear pendant, exhibiting the inside of the foot and leg, as high as the hough. The interior of the castle is quite equal, in point of grandeur, to the majesty of the exterior. The suite of rooms open to public inspection, compose what are very appropriately called the State Rooms. On entering the Great Hall you find yourself in an immense apartment, 70 feet long, 50 broad, and 30 high.

This hall receives light from a range of large ancient windows, on the south side from which are beautiful prospects across the park, woods, &c. with the renowned Aron washing its foundation, 30 feet beneath. The north side of the hall is completely hung with curious ancient armour; such as suits of mail cap-à-pic; rich cuirasses, superbly embossed with figures in gold, with shields to correspond; also swords, spears, gauntlets, and helmets of every description, most of which are of choice workmanship; many of them are of the time of Elizabeth, particularly about a dozen cuirasses, taken from the Spanish Armada. At each end of the hall are suspended the skeletons of two stags' heads, of enormous size, in full preservation; these were dug out of the bogs of Ireland, and are seven or eight feet between their extremities; there are also many other minor curiosities, among which is a curious ancient spur, the rowel being eight inches in diameter. The next room (proceeding west) is completely furnished with rare and ancient furniture, most elaborately inlaid with tortoise-shell, ivory, &c.; it also contains two curious cases of old china-ware, porcelain vases, &c. besides being entirely hung with pictures of the first masters, viz. Charles I., Prince Rupert his brother, Oliver Cromwell, St. Ignatius, Wortley Monague in Persian costume, Warwick (King maker), and many other productions of equal merit, by Vanduyck, Rubens, Wouvermans, &c. &c. The next room is the state bedroom in which Queen Elizabeth slept, when he visited her favourite, Sir Fulke Greville the founder of the present family; all the furniture (bed, &c.) is still in high preservation. There is in this room, a very handsome screen of needle-work, representing a view in the garden of Versailles; this is esteemed a curious *meuble* of ancient industry. The next room is also a very noble apartment, terminating the west end of the stle, and commanding beautiful prospects. In it are many noble pictures, particularly Anne Boleyn, Henry VIII., first Earl Russell, and others of the Bedford mily; old Parr, and old men studying music sketch by Rubens. These last three rooms have polished wainscot floors. The next and last apartment is the armoury, which divided into three parts: the first contains natural curiosities, such as fossils, stones, triflections, chrysalizations, &c. and likewise specimens of cut glass, bronzes, painted windows, &c. The second contains a large collection of Indian curiosities, of ears, knives, lances, arrows, bows, fish ts, cloth, and a long train of et cetera, in which are some of the most Mighty Gods at ever human knee bended to. In this room there is also a complete collection of English arms, from the Conquest to the present times. Amongst other curiosities is a coat of mail, in which Queen Elizabeth viewed her troops at Tilbury Fort: here are also murderous daggers, tremendous swords, poisoned arrows, and guns and pistols the most rare, ancient, and curious description; besides huge battle axes, tomawks, two-handed swords, with terrible

waved blades and two edges, which would not have disgraced the hand of a Goliath; likewise some curious instruments of torture, taken out of the Spanish Armada, among which is one for cutting out the tongue. The next, and last, contains what may be called body armour, consisting of coats of mail, breast plates, cuirasses, helmets, &c. many of which are very ancient, and have very visible proofs of having stood the brunt of the battle, particularly a leathern doublet, in which a former lord was killed at the siege of Lichfield, the blood still adhering to the inside. Indeed the whole of the armour has descended through many generations as an heirloom to the family, and is identically the same in which the valiant Earls of Warwick were wont to equip their vassals in the feudal times. The possessions pertaining to the castle were at one time the most extensive in the kingdom, consisting of no less than 7 or 8 castles, and 108 lordships, in different counties. So great was the power of the ancient lords that it frequently excited the jealousy and fear of the crown; and they have often been elipt of their lands and deprived of their authority, under some colourable pretext. And I am now confidently told, that had it not been for the very extravagant proceedings of the late Earl, the estate would still have yielded a revenue of one hundred thousand pounds per annum, although it now scarcely amounts to thirty thousand. The family of the Grevilles came in at the Conquest, and maintained a noble line of descent down to the present Earl. Their quarters contain the arms of no fewer than seventy-two noble families, among which are Plantagenet, Lancaster, Worcester, Norfolk, Northumberland, Bedford, Dorset, and many others equally illustrious."

#### To the Editor of the Literary Gazette.

##### EGYPTIAN SOCIETY.

SIR.—We have our Gaelic and our Hibernian Societies, for the Investigation of the Historical and Literary Antiquities of their respective countries. It has occurred to me, that a society on similar principles might be established with good effect to learning and science, taking its name from that nation which is the venerable parent of all that is grand and noble in the arts and sciences of the ancients; whose stupendous monuments are to this day so many touchstones of the integrity of ancient writers, affording inexhaustible data for the exercise of modern sagacity and research. Hitherto each new discovery, instead of becoming a key to unlock this great storehouse of antiquity, only adds, as has been justly observed, a new problem for the ingenuity of the learned to work upon.

The important benefits which Asiatic literature and science have received from the concentration of discoveries, learning, and ideas, through the labours of the society at Calcutta, encourage the hope that a society for the investigation of Egyptian antiquities might produce similar results; particularly as the subject has been so much before the public since the French expedi-

tion, from the publications of the French savans, as well as the researches of several of our distinguished countrymen. Such a society could no doubt be more eligibly established in London than at Alexandria or Cairo, there being no European settlement in Egypt; especially as we have so many men of learning and judgment, who have visited its antiquities, and devoted their talents to their elucidation. An interchange of ideas through the medium of the Literary Gazette, might be the means of forwarding so desirable an object.

Should this meet the eye of any who feel interested in the subject, the writer would suggest that persons who have visited the country with antiquarian or scientific views, and those who have published on its antiquities, history, chronology, mythology, astronomy, &c., as well as those who can come prepared with autographic papers on any of these subjects; should be eligible to attend the first meeting for the purpose of forming the rules and regulations &c. of the society.

The transactions of a society so formed would, if I mistake not, tend to consolidate and elucidate those *gemæ* of antiquity, hitherto the theme of admiration rather than of utility.

The insertion of this letter in your valuable journal will oblige, Sir,

Your constant reader,  
E. Greville.

London, 13th Dec. 1820.

##### ON CHRONOGRAMS.

#### To the Editor of the Literary Gazette.

SIR.—The remarks inserted in Number 183, of your highly interesting Journal, induce me to offer the following additional observations on this trifling-laborious species of composition.

On the taking of Briseac by Duke Bernard of Weymer:

1638. INVICTO FORIS CECIDIT BRISACIS ACHILLI;

INVICTVRET TANTO DIGNA VELLA VIRO.

On the raising of the siege of Vienna:

1683. VIENNA AVSTRÆ ꝑ IVLIJ AB ACHMETE II OBSERVA ꝑ SEPT: EX INSPERATO AD KO DESERTA EST.

These proofs of bad taste however were not confined to the Germans, but were prevalent likewise among us; thus, over one of the stalls in the Choir of Winchester Cathedral, are the medallions of Charles I. and his Queen Henrietta, and near them the following chronogram:

1634. SINT DOMVS NVIVS PH REGES NVTRITA REGIN NVTRICES PLÆ.

In a tract entitled "*A Winter Dream*," there is one on the confinement of Charles I. in the Isle of Wight:

1649. QVANDO REX ANGLORVM VROTVICTIVBAT CAPTIVS.

The Jews also frequently made use of chronograms to mark the dates of their books\*; for in the title page of a grammar:

\* Although the introduction of them into

printed at Ferds in Germany, is this passage:

שנת והנה ענינים ראוי כפר  
המר ר אליכס:

The elevated letters of which, added together, produce the year 528, i. e. 1768 of the Christian Era. The words themselves are taken from the 45th chap. of Genesis, and part of the 12th verse; and independent of the date, give a remarkable allusion: the translation is, "Behold your eyes see that it is my mouth that speaketh unto you," where the word *mouth* signifies *language*, and the grammar being composed in Hebrew solves the otherwise senseless quotation.

Another instance occurs in a bible printed at Amsterdam, taken from Psal. cxlvij. 20:

מגיד דברו לעמק הקו ומשפטי  
ישראל:

"—He sheweth his words unto Jacob; his statutes and his judgements unto Israel," where the word *Israel* contains the date 571, which answers to A. D. 1811. In short the Jews are so extremely addicted to this species of folly, that even at the present day, that man is regarded as the most learned amongst them, who can with the greatest facility adapt passages of scripture to particular dates or years. Some of them are excessively ingenious, from their not only pointing out the time, but even being applicable to the person or thing alluded to: thus the following two were lately composed, and given me by my Hebrew master.—A person of his acquaintance marrying a short time since, he sent him the following verse from Prov. xviii. 22.

מָצָא אִשָּׁה מָצָא טוֹב

"Whoso findeth a wife, findeth a good thing;" the whole of the letters of which give the year 579, i. e. A. D. 1819.—On the death of Lord Nelson, he discovered, that God took him because he saw טוב "that it was good," which form the number 47, the exact age of our hero. I have several others in my possession, but shall omit them as they are rather mysterious, and require much explanation: many however have considerable merit; but it must be allowed that the present Jews look upon this practice with too superstitious an eye, and frequently suppose sentences to have a magical influence, which in reality proceed from merely natural coincidence.

CAUS.

books is of modern date, yet they will be found to have been used from the earliest periods, and among all nations. One of the chief divisions of cabalistical learning is the affixing numeral powers to literal forms; and most of the mystical appellations of the sun contain the number 365, implying the period in which he passes through the Zodiac. St. John in Rev. xiii. 18, gives also an example, and for the various opinions and interpretations of which *vide* Faber's Prophecies, vol. 2. pp. 275, et seqq. and 331 to 341.

## ARTS AND SCIENCES.

Captain Leslie, of the American vessel the *George and Susan*, invented in his voyage from North America to Stockholm, the following simple method of keeping the ship's pumps at work, when the sea runs high, and when the crew are not sufficient, or are already fatigued. About 10 or 12 feet above the pump he fixed a spar, or small mast, one end of which projected overboard, while the other was fastened as a lever to the machinery of the pump. To the end which projected overboard, was suspended a water butt half full. By this simple contrivance every coming wave as it raised the water butt, depressed the piston of the pump, and every retiring wave, as the water butt sunk with it, raised the piston again; and thus, without the aid of the crew, the ship was cleared of water in four hours time.

### TRAVELLERS IN BRAZIL.

The celebrated travellers Messrs. Martius and Spix, members of the Bavarian Academy of Arts, who during an absence of some years have traversed Brazil in several directions, and made there several very important discoveries and researches in Natural History, arrived here the day before yesterday, and departed again yesterday. Since their arrival in Europe they have passed some time in Lisbon, Madrid, and in the east of Spain. They came here by way of Perpignan and Lyons without having visited Paris, and are going directly to Munich. They have already sent a part of their collections to Munich. We may expect a detailed account of their travels; to enable them to prosecute which, the King of Bavaria has furnished considerable sums. They have brought with them two young savages, a boy and a girl, between 10 and 12 years of age. The girl is of a very savage tribe, from Terra del Fuego; the boy seems to come from a less turbulent race (from Paraguay); he is tattooed under the nose and round the mouth. The girl, according to the custom of her nation, has the nostrils pierced. They neither of them understand the other's language. The boy has accustomed himself to European cookery, but the girl prefers raw meat to all other dainties. The former inspires universal interest by his physiognomy and his whole appearance; but the girl, on the contrary, is extremely ugly and disagreeable. It has been affirmed, that our travellers left Brazil with eight young savages, who were to be educated at Munich, but that six died on the voyage. We cannot, however, vouch for the accuracy of this statement.

ASTRONOMY.—Copenhagen, Dec. 9.—It is well known, that a Board of Longitude was established here in 1801, by which however nothing remarkable has yet been published. But now, Professor Schumacher has calculated tables of the distances between the Moon and the four planets, Venus, Mars, Jupiter, and Saturn, for the year 1822; and added tables for 1821 and 1822, to determine the latitude by observations of the

Polar Star. They are printed in the form of the English National Almanac, and are published both in Danish and English. They will be of great use to navigation, as they are not in any other book for mariners.

St. Petersburg, Dec. 1.—Captain W. Sibirev, who sailed in July, 1819, from this strait, with the sloops *Okritie* (*Duane*) and *Blagonamereni* (*Meanwell*, or *Goat Intent*), arrived in safety with the first boat in the harbour of St. Peter and St. Paul: Kamtschatka, on the 15th of July, this year Captain Schischmarev, who commanded a second ship, discovered, on the 22nd of April, in sailing between the New Hebrides and an island of Fidji, a low island covered with sand and bushes, to which he gave the name of his ship. Some of the inhabitants were of a dark brown colour, approached them in four boats, but did not venture on board. They however grew familiar with iron articles and looking-glasses were shown them; with the latter they were particularly pleased. After making this discovery, a vessel proceeded to Oonalaska on a special mission. The *Okritie* sailed again on the 8th of August to prosecute her voyage.

(From a German Journal.)

The Chevalier Theodore Carcizus, a Piemontese, has invented two kinds of new tables, which he calls geocentric, and heliocentric tables, and by their aid, a person without any knowledge of mathematics may very short time thoroughly observe the course of the stars, and explain the celestial phenomena. Ladies, and youths, who the inventor has instructed in his method, have without much previous knowledge in astronomy, satisfactorily solved various problems respecting the sun, the moon, the planets, fixed stars, eclipses, &c. By means of these instruments, you may, in the open air, obtain a meridian line in a few minutes, and in a journey by land, never miss the direction to the North. You may also learn the hour during the night, without a watch. It is remarkable, that in the country the geocentric table may appear in the shape of an astronomical garden, of whatever size you please. It is to be hoped that the inventor of this new method, of which we have given this imperfect notice, will be able to overcome all the difficulties which usually oppose useful innovations of this kind.

### THE THIBET GOATS.

One division of the flock of Thibet goats imported to France last year by M. M. Ternaux and Jaubert, was placed in a fold among the mountains on the north-east of Toulon. Owing, however, to the excessive heat of the climate, or the resinous quality of the trees with which the hills are covered, they have not been found to thrive so well as those in the royal folds of Perpignan.

Convinced by experience of the advantage produced by a cool climate, on the health of these animals, M. M. Ternaux and Jaubert determined to remove the greater part of the flock to a situation near Paris; and they accordingly arrived on the 23rd of November at M. Ternaux's folds at St. Ouen.

The kids which have been brought forth since the arrival of the flock in France, are thickly covered with the valuable down which is used in the manufacture of Cashmere shawls. They are even more vigorous than the kids of the same age, a circumstance which removes all doubt as to the success of the naturalization.

We have received the following anonymous:—Mr. John Fosbrooke, surgeon, &c., is in possession of a chemical combination, by which buildings, cement, &c., painted or damp surfaces in or out of the external air, may, by simple washing, at small expence, be preserved from the future growth of obscure vegetation, as the green mould, lichens, &c. and even discoloration.

## ORIGINAL POETRY.

[By Correspondents.]

## A FACT VERIFIED.

A dandy's captivating mien,  
An heiress led to Gretan Green;  
She, in a riding habit drest,  
A beaver hat, a sombre vest,  
And somewhat carelessly arrayed,  
The hurry of her jaunt betrayed;  
While he, in stays was tightly laced,  
With bosom full, and taper waist.  
The puzzled priest, surveying both,  
Said, "I to make mistakes am loth,  
And find it out, I never can,  
So pray—Which of you is the man?"

## THE RADICAL.

Comments on a *Mimener*.

Returning from a masquerade,  
Says Lady Susan to her maid,  
"My *Ridicule* I have mislaid!  
Ask if 'twas in the carriage left."  
The word was on its road bereft  
Of all was foreign in the sound,  
E'er to the coachman it went round,  
And thus the honest driver said,  
Shaking his plump well powder'd head,  
"My lady's *Radical*, you say—  
Why, in the coach he made no stay;  
He spied my lord, and slipped away,  
The same as every other day.  
I always knew my lady's tricks,  
But ne'er, till now, his *Politics*."

## MUSIC.

What passion cannot music raise and quell?

DRYDEN.

Mysterions keeper of the key  
That opens the gates of Memory:  
Oft in thy wilddest, simplest strain,  
We live o'er years of bliss again!  
The sun-bright hopes of early youth;  
Love—in its first deep hour of truth;  
And dreams of life's delightful morn—  
Are on thy seraph pinions borne.  
To the *Enthusiast's* heart thy tone  
Breathes of the lost and lovely one;  
And calls back moments brief as ear,  
When last 'twas wafted on his ear.

The *Erile* listens to the song  
Once heard his native bowers among;  
And straightway on his visions rise,  
Home's sunny slopes, and cloudless skies.

The *Warrior* from the strife retired,  
By Music's stirring strains inspired,  
Turns him to deeds of glory done,  
To dangers 'scaped—and laurels won.

Enchantress sweet of smiles and tears,  
Spell of the dreams of vanished years!  
Mysterious keeper of the key  
That opens the gates of Memory!

'Tis thine to bid sad hearts be gay,  
Yet chase the smiles of mirth away;  
Joy's sparkling eye in tears to steep,  
Yet make the mourner cease to weep!

To gloom or sadness thou canst suit  
The chords of thy delicious lute:  
For every heart thou hast a tone  
Can make its pulses all thine own!

Mr. Editor,

Sir,—Sometime ago I sent you a little song as I composed, addressed to my daughter Nancy, or as we call her "our Nance," having heard my neighbour Tomkins read out of a printed book, a pretty song, written, as he told me, by a poet to his son Johnny, aged six years. Lord! says I to my wife, why I could write a song about our Nance; and forthwith I tried to remember how pretty she looked sucking lollipops, and skipping about; and then I wrote down the song I sent you a good while ago. I am afraid my letter miscarried! but my wife thinks my song is amongst the bad poetry we read about, but I don't; so for fear you have not received, I have copied it out again, which I shall be proud to see in real earnest print:—and neighbour Tomkins will stare when I shews it to him. I am, Mr. Editor,

Your obedient servant,

WILLIAM JONES.

Warwick Lane.

Grocer and Tea Dealer.

To Nancy Jones, aged six years.

My little darling Nancy,  
My love, my joy, my fancy;  
You've nasty dirty chops  
A sucking lollipops;  
Go to thy mother, dearest,  
Why, what is it that thou fearest?  
Nay, she will not beat thee,  
But by her side will seat thee,  
And wash thy pretty face—  
Oh now you come with joyous pace  
Expecting me to kiss you!  
Oh Nancy, I shall miss you;  
When you to school must go,  
To learn to write, and read, and sew.  
You are never still nor easy;  
Your brother's love to tease you  
A getting at my plums, Nance,  
And making dirty thumbs, Nance;  
A sitting on the counter top,  
Or running in and out the shop;  
O darling Nan, or Nauncy,  
On my knee I love to dance you.  
You love to make a noise and rout  
And dearly love to run about.  
May all your life be happy;  
Pray always love your pappy,  
Who writes such pretty verses,  
And all your little pranks rehearse.  
And now sweet Nance, adieu—  
Good bye, good bye, to you.

On being told to Remember.

"Remember thee!" yes, when the day  
Begins to chase night's shades away;  
At noon, and night, I'll think on thee;  
Say, wilt thou e'er remember me?

"Remember thee!" yes, should the sun  
Forget to shine, or cease to run;  
E'en then, dear girl, I'll think on thee:  
Sweet! in return, remember me.

Nor halcy sleep, can lull to rest,  
These anxious thoughts within my breast;  
For in my sleep, I dream of thee—  
Sweet! in return, remember me.

Nor shall my thoughts to others stray;  
I'll think of thee when far away;  
And when I bend the pious knee,  
Sweet "Adzias," think on thee.

London, Nov. 1820.

M. R.

## SKETCHES OF SOCIETY.

## TRAVELLERS.

A letter from St. Petersburg has found its way into several of the daily newspapers, giving an account of a Captain Cochrane of the Royal Navy, travelling in an eccentric manner between the frontiers of Russia and Chinese Tartary, in the direction of the Altai Mountains. This letter describes Capt. C. to be "of the middle size, meagre, and possessed of a constitution fitted to endure the fatigues and hardships of travelling. He does not save himself on his journey; and travels commonly eighty worst each day on foot (near fifty-three English miles); he speaks French and a little Russian; his dress consists of a kind of coat made of skin, a pair of nankeen pantaloons, a sort of stuffed waistcoat, and leather gaiters. He carries with him a pair of shoes to change, a geography in the English language, some sea charts, a small tin box fourteen inches long and one inch thick, in which he keeps his passport, his journal, his pipe and penknife, besides some weapons and provisions." Upon this subject (among others of public interest mentioned in our subjoined correspondence) we have the following particulars.

Moscow, 23d Oct. 1820.

Lord Kinnoul was here lately: he remained but a few days, so that I did not see him. Mr. and Lady Tickell, a niece of Mr. Pitt, also lately passed through Moscow on their way to Tiflis, in Georgia. Travellers going by Odessa to Constantinople, or visiting the Crimea frequently come this way, so that now and then we have a little home news. Among those of our countrymen who have passed this way lately, I have met with a Captain Cochrane, of the navy, a relation of Admiral Cochrane, who is gone on a wild walking expedition to Kantschatka, with a view of passing to America, and making discoveries. It is much to be feared he will perish in the attempt: he was robbed and stripped to the skin between Petersburg and Moscow, and stoned by the people in passing through a village near Nisney Novogorod, where his unusual appearance made the people think he was a Frenchman. We have heard of his arrival at Tobolsk, where he means to winter. Great progress has been made in rebuilding Moscow, and it is much improved; in many places of the town no remains of the late destruction are seen, and the number of houses rebuilt is truly astonishing.

While on the topic of remarkable journeys.

we may mention that we heard, a few weeks since, of a traveller of the name of Gordon, who had reached Calcutta after having traversed the vast portion of the globe from the Russian frontier over the whole table-land of Asia. If we are correctly informed, this is the most extraordinary journey of our times.

### THE DRAMA.

We shall perhaps gain no credit with our more sedate and learned readers, for compressing, as we mean to do, our dramatic criticisms for the week, within a very narrow compass. When it is considered that this is the season of Punch and Pantomime, and that all the recondite science of Friar Bacon, and glorious spirit of our Arctic adventurers, have been brought into visible action, we are sure that more than a brief sketch would be expected from a scientific journal, and one which has so largely dwelt upon the brilliant exploits of the northern navigators. But to confess the truth, though *a priori* well disposed to take up these subjects with all the solemnity and deliberation due to their importance, we must say, *a posteriori*, that we have been so much disappointed in the manner of their treatment, by our esteemed conditors (Messrs. Winston and Farley, of D. Lane and C. Garden), that we have lost every disposition to join them in their attempts to expound Bacon, and elucidate Polarity. Of the Drury Lane pantomime, therefore, of *Harlequin Equimaux*, or the North West Passage, we shall merely state, that it is one of the worst we ever witnessed. The decorative parts are poor; the performances, with little exception, quite contemptible; and the triple action of trick, change, and machinery, miserably contrived and ill-managed throughout. We were quite sorry to see the wretched style in which the piece was got up; for in these enlightened days, so much of a theatre's prosperity depends on an attractive pantomime, that so great a failure in this respect must be very injurious to an establishment which cannot well bear it, and to which every lover of the drama must wish success. At Covent Garden, though inferior to the most popular things of the sort, *Harlequin and Friar Bacon* displays some magnificence, two or three good tricks, a fine panoramic scene, and the incomparable clowning of Grimaldi. These will carry it through the holidays; and with greater chance of profit in consequence of the bad luck of the other house.

Vandenhoff has performed Rolla with some eclat. Wallack, his competitor in this part, plays it with interest and effect. Mr. Cooper does Alonzo as genteelly as white kid gloves permit; and there is a Pizarro, one Mr. Thompson, who has the rare merit of being quite original in the character.

• The Clown was guilty of taking an impudent liberty with the audience on Wednesday evening, by introducing political names: he was justly hissed for his pains, and taught, that as cobblers should not go beyond their last, so neither should Clowns say what is not set down for them.

The new Tragedy of *Mirandola*, will, we hear, be fully rehearsed by next Saturday. Theatrical report, and public expectation, seem to be alive on the subj. et.

*English Opera House*.—A new species of entertainment has been produced here: we have not been able to see it yet, but learn from a critical friend, that it is a better kind of puppet-show. Actors and actresses amuse themselves (if not the audience) behind a transparent curtain: there is some singing, plenty of puns, and other rational entertainments!

The Minor Theatres have burst into new activity. The Surrey, clever as usual; the Olympic, amusing; the Cobourg, so-so; the Adelphi, tolerable. We intend devoting an evening to each, and reporting fairly, for the benefit of the rising generation.

### To the Editor of the Literary Gazette.

Sir,—If the following remarks, on one or two points relating to the stage, appear worth your attention, I shall be obliged by your giving them a place in the *Literary Gazette*. During some months spent on different parts of the Continent, I was, like most travellers, much in the habit of frequenting the theatres of the places in which I made any stay. I could not help observing some trifling particulars in the mechanical part of theatrical management, in which the French, and, following them, the Germans and Dutch, certainly excel us. I need not tell you, that in tragedy and genteel comedy the French writers pay special attention to unity of scene; and, in consequence, that the stage usually represents a chamber, the entrance to which is by folding doors. In the middle of the scene which stretches across the back of the stage and bounds the spectators' view. This scene is either let down from above, or pushed up through a trap-door, and being composed of one piece of canvas, does not present that woeful break "*hincus valde defendus*," down the middle, which always offends the eye on our stage, from the circumstance of the scene being composed of two parts, pushed on from their respective slides. It is really quite ludicrous to see the two halves of what is meant for a portrait, cruelly separated by an awkward scene-shifter, and some stern-looking worthy, or perhaps "my uncle Oliver" as completely clobbered to the briskest as if the sword of Amadis de Gaul had been at work upon him; while the vociferous *Gods* shower down all manner of unedifying upon the bungling servants of the stage. And when the sundered parts, after quivering some time in the air, do contrive to join, the case is not a whit improved; no "healing art" can remove the terrific scar which intersects, not only the face of the unlucky portrait, but the whole of the imaginary wall. But the absence of this absurdity is not the only advantage possessed by the other method: all the actors enter through the folding doors I have described, instead of sneaking in by the side-scenes, as with us. The French do not forget that a room, such as is represented on the stage, has usually only

one door; and being content with this solitary entrance, they convert the side-scenes into what they are intended to be, the walls of the room. Again, it always strikes me that there is much more dignity in advancing in full view of the audience from the bottom of the stage to the front, than in coming in at all parts of the divided wall at the side, where (except in the proscenium) we do not even the apology of a sham door for our admission. I say nothing of the advantage enjoyed by the persons seated in the boxes, and those next it, of seeing and that passes behind the scenes. I say nothing of the power which these favoured individuals enjoy, of marking the exact moment at which the huskied hero, retiring from the scene, relapses into the man; when his measured pace, sustained for a proper distance in his retreat from the stage, gives us the strain of meander mortals; and his scarce length of face is exchanged for a hearty laugh, on receiving the congratulations of his brother actors. Ensclosed in the stage-door at Covent Garden or Drury Lane, I have been an unwilling witness to sundry other occurrences, not meant for the public eye, some of them too insignificant, others of too sinister a character, to bear relation. The last point with which I shall trouble you, is that of the position of the Prompter. In all the foreign theatres I have seen, he is uniformly seated in the middle of the proscenium, below the stage, above which his head only appears. He is not seen at all by the greater part of the audience, being sheltered as it were by a low shelf rising about a foot above the stage, immediately before the raised seat of the leader of the band, which does not impede the view. If an actor is not perfect in his part, instead of shuffling towards the side-scene, and looking one moment at the audience or his fellow-performers, and the next at the prompter seated behind the side-scene, he and his colleague or colleagues advance to the front of the stage, and take a position where he is enabled to receive every word from the prompter, whose voice, as its sound *rises* towards the ear of the actor, is never raised so high as to be heard by the audience, which is certainly not the case on our large theatres, where propriety is sacrificed, either by the retreat of the unfortunate actor to the side-scene, or by the shouting of the prompter, plainly enough to be heard by persons in the boxes near the stage. I am aware that the genius of our drama will not admit of the constant use of the foreign back-scene, which, however, might be introduced on most occasions (in comedy especially) with great advantage. I would also abolish the doors in the proscenium, or space between the lamps of the orchestra and the beginning of the side-scenes; it should, I think, be kept sacred (except in the case of application to the prompter) as a sort of neutral ground between the actors and audience; for

"The distance lends enchantment to the view."

I must request your indulgence for these hasty observations; they are dictated by a wish to see our theatres as pre-eminent for the correctness of their stage management as

they are for the splendour of their architecture and decorations.

I am, sir, yours, &c.  
T. E. C.

Cambridge, 17th Nov. 1820.

## VARIETIES.

*Swift's Battle of the Books*,—was borrowed from a little French volume, entitled *La Guerre des Bêtes, 1671*; and it is most probable that "Il Divortio Celeste," of Fecate Palarichini, furnished the hint for his *Tale of a Tub*."

*Liberty*.—It was the saying of a consul under Nerva, that it was a great misfortune to live under an emperor who would suffer obdily to do any thing; but that it was a still greater to be in a country where every obdily might do every thing they pleased.

*Curious Frontispiece*.—The copperplate engraving which faces the title page of a small edition of Cornelius Nepos, published at Amsterdam, 1783, represents on one side our Saviour on the Cross; and on the other, a figure of the author, from whose mouth a label appears to issue forth, bearing the following inscription: "Lord Jesus, lovest thou me?" which is answered by another label affixed to the mouth of the person addressed, with "Highly famed, excellent, and most learned doctor Seger, imperial poet, and well decorated master of the school at Wittenberg; es, thou knowest that I love thee."!!!

The slight shock of an earthquake was felt in Merionethshire, on Wednesday se'enight.

The Aurora Borealis, or Northern Lights, were seen on Sunday se'enight, from Croer, in the county of Norfolk.

The lovers of Astronomy will shortly have a favorable opportunity of observing the new planet *Vesta*. By a paper laid before the Astronomical Society of London, it appears that she will be in opposition between *Geminus* and *Cancer* on the evening of the 13th of January. If a line be drawn from *Cantor* through *Pollux*, it will cut two stars in *Cancer*, of the sixth magnitude, situated near to each other, and designated in the catalogues of the Greek letters  $\mu$ . The most northerly of these two stars is called  $1\mu$ , and the other  $2\mu$ ; she will pass close to the latter of these, on the 22nd instant, and proceed nearly in a straight line towards *A*, in *Taurus*; to the north of which she will pass in the 9th of February. By the assistance of a map of the constellation *Geminus*, this planet may be readily found with a good telescope, and her progress watched for upwards of two months.—*Daily Papers*.

*Sheridan*.—No man was readier with a epartee than Sheridan. The relater of this anecdote once encountered him nearly opposite the Adelphi, just at the moment when a cart loaded with long iron rods was passing; and upon casually remarking that the music made was none of the most delightful, Sheridan immediately rejoined, "Music—music?" glancing at the vehicle, "oh, yes

to be sure, ironically speaking! certainly not."

*Warnings*.—The *Journal de Liege* publishes the following predictions of the old Tyrolian Prophet, *Rudolph Wartgarn*, now in his 89th year. The above journal observes, that the prophet foretold the temperature of last year in the most exact way.

*November*.—For the most part cold and damp.

*December*.—During the first half of the month a cold north-east wind will prevail; during the second half, rain and snow.

*January*.—This month will commence with hard frosts, which, however, will not last long; a south-west wind will bring thaw and rain.

*February*.—Excessive cold will prevail throughout the first half of this month; during the latter half, the weather will be mild, with occasional snow.

*March and April*.—During these two months, the temperature will be so extremely mild, that the trees will appear in blossom, and every thing will devote an abundant season.

*Puffing*.—The following modest advertisement is taken from the *Mercurius Publicus* for Nov. 20, 1663. "Newly published, the second part of *Hudibras* (by the incomparable author of the former) which if possible has outdone the first; sold by John Merton and James Allestry, at the Bell, St. Paul's Church Yard." By which it would appear, that the art of puffing was understood and practised as well then as in our own day, by booksellers and authors. Neither was the trick of fishing titles and names totally unknown, as we gather from learned *Anthony Wood*. "It was a usual thing in those days," says he, "to set a great name to a book by the sharking booksellers, in order to make it sell."

*Story*.—Pope was once complaining to Arbuthnot of the attacks to which his character was constantly subjected, when the doctor in reply begged to tell him a story. A gentleman, says he, passing down the Strand, was accidentally dirtied by some scavengers, who were collecting the mud at the road side. Being extremely passionate, he violently abused them, which they bore with silent patience; but their forbearance served only to irritate the bean, who attempted with his stick to throw some of the contents of their load upon the men. "Ah master, if you are for that sport, we'll suit you in a trice, that is our trade!" with these words they returned his unavailing salute, thick and threefold; nor could they be persuaded to desist, until they had entirely covered him with filth from head to foot. Pope saw not, or would not see, the drift of the story; he persisted in pelting, and was pelted the greater part of his life. There are authors living at the present moment, by whom the hint might be applied to very useful purposes.

*Roman Sepulchre in France*.—In the neighbourhood of St. Seurin de Codourme, in the department of the Gironde, (where are seen the ruins of a place called Brion, which existed in very remote ages, and was des-

troyed by the English under the celebrated Talbot), Mr. de Rostaing of Codourme, Chevalier de St. Louis, has found a sepulchre of white marble, of gigantic dimensions. The bas-reliefs, which represent a battle, are in the best taste, and of admirable expression. The athletic forms, the life and spirit which breathe in the whole composition, show a Roman hand, did not the costume and accompaniments bear indisputable evidence of it. The inscription has been impaired; but Mr. de Rostaing has made out what follows.

Fabu.....Germ.....N....VI....  
Debellantem.....mors.

Duce Cesar.

There were found within this sepulchre, a sword, and a coin supposed to be a sestertius.

*LITERARY*.—The troublesome system of duties and drawbacks upon books passing between England and Ireland, has been discontinued by a Treasury Minute, in so far as regards private property. We wish government would revise the law on the subject of duties on works of art, remains of antiquity, &c. imported from abroad. Such things enrich a country, and ought not to cost individuals one penny for bringing them in.

## LITERARY NOTICES.

### NEW EDITION OF PETRARCH.

A new and splendid edition of the Poems of Petrarch, by Professor Antonio Marsand, at Padua, has been published in two volumes royal quarto, on the finest wove paper. This edition is far superior to the numerous editions before published, both in the correctness and beauty of the impression. It is ornamented with a fac simile of the hand writing of the illustrious poet, and several engravings by the best Italian masters, among which are the portraits of Petrarch and Laura, the first by Maura Gaudoli, the latter by the celebrated Raphael Morghen. The literary merit of this edition has received the just tribute of commendation in the discourse held by Professor Meneghelli in the academy of Venice, and in many of the most distinguished journals of Italy and Germany. His Majesty, the Emperor of Austria, has subscribed for a copy for his own library, and for 24 copies for the principal Academies, &c. in the Austrian dominions.

*Contents of the Journal des Savans for November, 1820.*

I. Robert Walpole's Travels in various Countries of the East. Reviewed by Mr. Letronne.

II. Saint Allais, l'Art de Vérifier les Dates.—M. Daunou.

III. H. H. Milman, the Fall of Jerusalem.—Mr. Raynaud.

IV. Quelques Remarques Historiques, sur les Dialogues, dites Socratiques.—Letronne.

V. G. Spurzheim, Essai Philosophique sur la Nature, Morale, &c. de l'Homme.—Abel Rémusat.

VI. Géographie de Strabon (en Français) Raoul Rochette.

• In the possession of the writer.

This book should be returned to  
the Library on or before the last date  
stamped below.

A fine of five cents a day is incurred  
by retaining it beyond the specified  
time.

Please return promptly.
